

METSERVICE

A world of valuable information

Julie Fletcher

Manager Marine Observations

Expectations and Standards

Perspective from service with small VOS Programme

- What makes a VOS programme successful?
- What makes an effective PMO?
- Look at some practical areas to show where PMO work can make a difference

Presentation Outline

- MetService NZ VOS Programme
- Visiting
- Recruitment
- Barometer Comparisons
- Performance Monitoring
- Summary

Important
Factors

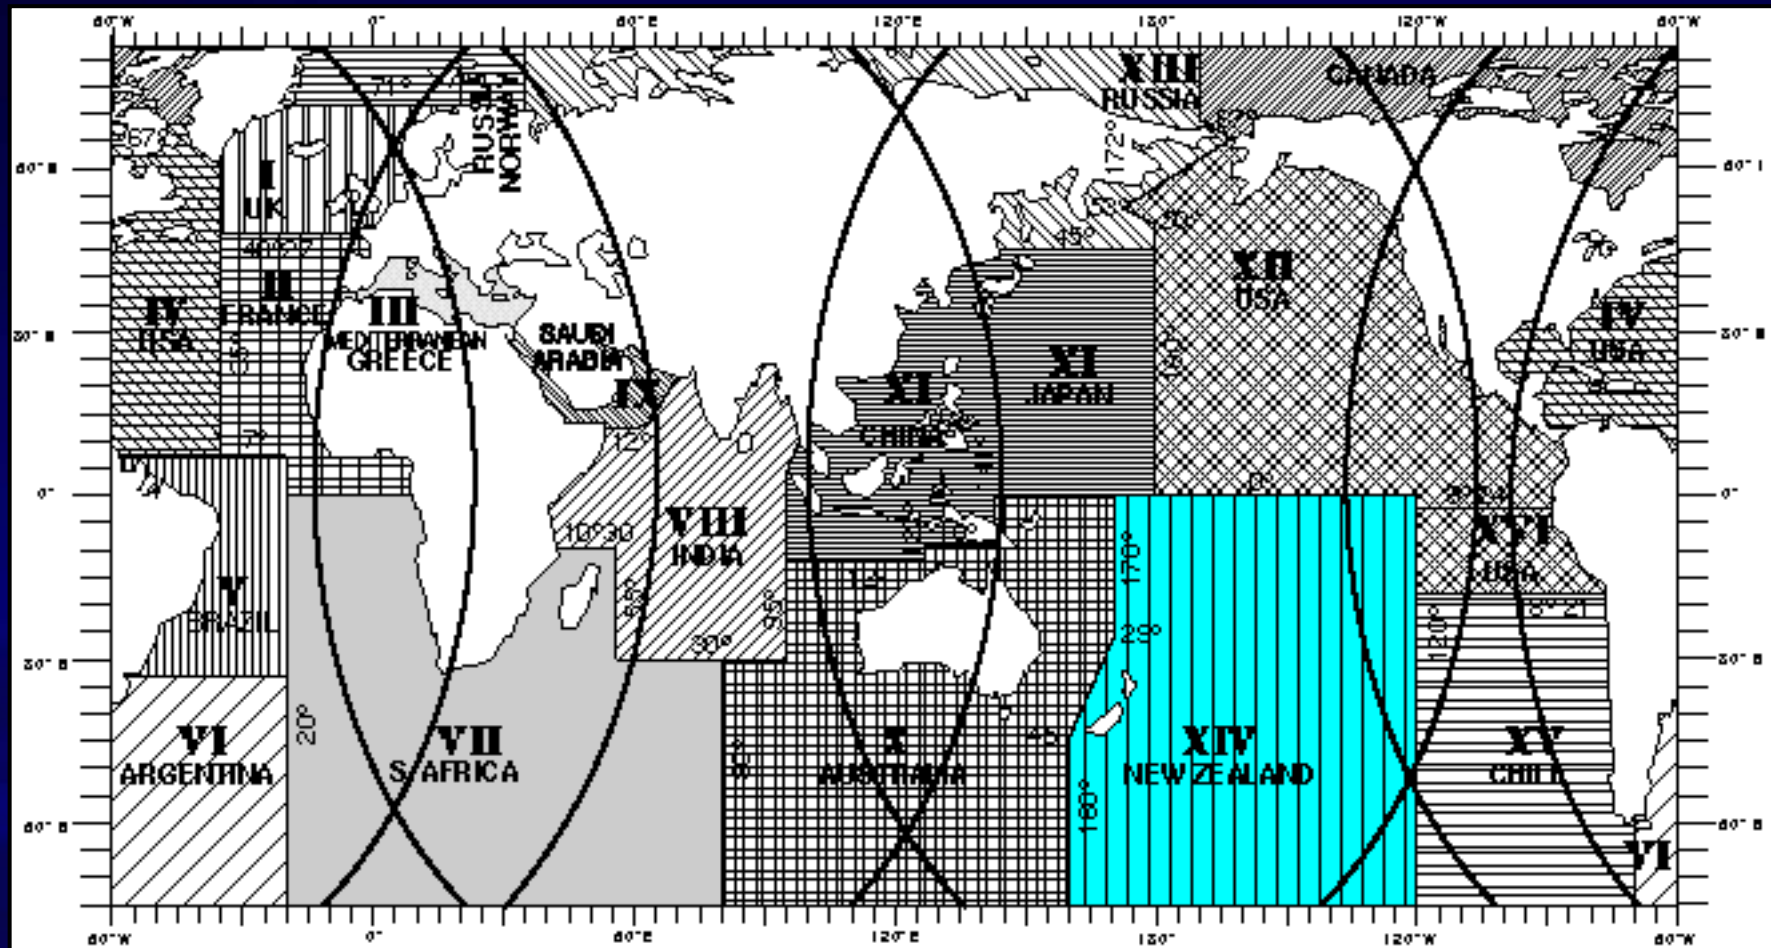

MetService NZ Marine Network at 1/7/03

- 8 Drifting Buoys
- Total NZ VOS = 50

36 Selected

6 Supplementary

8 Auxiliary

VOS Management

- All Ship visits
- Recruitment of VOS ships
- All correspondence with ships, WMO, etc
- Maintenance of VOS database
- Assistance to foreign VOS
- Monitoring of Ship OBs
- QC + follow up action

Changing Marine Industry

- Time of enormous change
- Less stable VOS
- VOS numbers are volatile
- Increase in FOC ships
- More after hours ship visiting
- Improved communications

Programme Overview

- Know whole process
- Unique overview
- Problem areas identified
- Focus on important issues

Important Factors

- RealTime access to GTS SHIP OBs
- Benefits of preparedness
- Constant monitoring of OBs and follow up visits to ships are crucial
- Providing ships with clear instructions
- It's about being pro-active

Steering Strategies

- Number of ships in VOS not important - it's the number that report that count
- Coded OBs are worthless if they are not received at the Forecasting Office
- Doesn't matter which country a ship reports for, so long as it reports.

Ship Visits

- Visits to NZ VOS
- Visits to Foreign VOS

What makes an effective visit?

NZ VOS - Before Visit

Preparation is the key

- Prioritise ships to visit
- Read notes on last visit
- Check for OBs receipt & print OBs to show ship
- Check OBs quality

Be informed ready to target any problem areas

Ship reports from 0000Z 19-MAY-2003 to 0400Z 05-JUN-2003

During Visit

Purpose of visit - to thank for OBs, to encourage, to train, to check instruments, to issue supplies

- Visit Master - discuss OBs programme, forecasts, voyage, marine industry
- On Bridge - check instruments, stationery
- Ask to see OBs book - discuss coding with duty officer
- Show OBs listing & discuss any coding errors
- View transmission format on hard copy of telex messages

OBs Transmission Format

REPORT.525

After Visit

- Record details of visit in VOS database
- Follow up on any issues
- Advise by Email, or mail supplies

Some Pointers

- Remember SHIPs are doing us a favour - thank and encourage them to ensure continued Obs
- Credibility - PMO is the interface between MetService & Marine industry
- Visits provide intelligence on changes in industry
- Discretion required with info learned

Visits to Foreign VOS - Why?

- Requested by overseas PMO
- To thank/encourage OBs same as national VOS
- Foreign VOS make OBs in local waters & deserve support
- Some ships never return to country of recruitment and rely on local PMO for assistance

Be Prepared

- Know the status of the ship to be visited (WMO 47)
- If callsign known - check for OBs receipt and print a listing to take to the ship

On Board

- Same as national VOS
- Support, thank, encourage, discuss value of their OBs
- If ship unknown - ask if doing OBs?
Look at logbook and transmission format
- Discuss any coding problems

After Visit

- Knowing the callsign, check for OBs
- Advise ship of OBs receipt
- If not received follow up with ship until OBs are received
- Advise overseas Met Service of visit details

Visits to Foreign VOS are Rewarding

- Many ships have not had a visit for a long time
- They are pleased when PMO shows interest in them
- A list of their OBs shows the system works

These visits prove to ships that doing OBs is worthwhile
& keeps them reporting

Ship Visit & Ship Recruitment

SHIP VISIT

SHIP RECRUITMENT

Ship Recruitment

- Which ships to target?
- Seek permission from Shipping Company

Satisfy local requirements
- charter length, route, interest, communications

Recruitment Day

- Install instruments
- Training on coding, and instrument operation
- Paperwork & metadata

After Recruitment

- Await arrival of first OBs - get Forecaster comment
- Advise Ship OBs received, comment on quality

FOLLOW UP is Important

Initial feedback encourages ship
and prevents bad coding habits being perpetuated.

Dealing with Rejection

- It is a Voluntary programme
- Accept that not all ships are interested
- Don't take it personally
- Try again after a period of time

MSL Pressure

What is required?

Accurate reliable MSL coded pressure in SHIP OB

Used for:

- National Weather Forecasting
- Global Model input
- Climatology

NZ VOS Barometers

All ships supplied with calibrated barometers at recruitment

Barometer types:

- Precision Aneroid Barometer
- Fuess Aneroid Barometer
- PMO Transfer Standard is Vaisala PTB220AD

VAISALA

1012.61 1012.58
1012.63 1012.60

CL

ENT

On Board Ship

- PAB installed with MSL correction card hung beside it
- Fuess Aneroid set to MSL (using average height of eye) with calibration label stating Nil error to MSL
- PMO barometer comparison results recorded

Barometer Use

- Officers trained to use MSL table with PAB
 - without it AP too low
- Differences between barometer types and settings explained to officers
- If bridge is air conditioned
 - open bridge door before reading barometer

PRECISION ANEROID BAROMETER CORRECTION TABLES

TABLE A

P.A.B. CALIBRATION	Barometer reading (hPa)	Correction @ 20°C (hPa)
	1050	+0.2
	1040	+0.3
	1030	+0.2
	1020	+0.2
	1010	+0.1
	1000	+0.1
	990	+0.1
	980	+0.1
	970	+0.1
960	+0.1	
950	+0.1	
Ser.No.	A437	
Cal. Ref.	A437/10	
Signed	<i>J. Buma</i>	
Date	4.6.2003	

INSTRUCTIONS

- TO OBTAIN PRESSURE AT LEVEL OF BAROMETER**
Add (Algebraically) the TABLE A Correction to the Barometer Reading.
- TO OBTAIN SEA LEVEL PRESSURE**
 - Estimate the height of the barometer above sea level to the nearest metre.
 - From TABLE B obtain the correction using the appropriate height and air temperature column.
 - Add this value (b) to the barometer level pressure to obtain the sea level pressure in hectopascals (hPa).

TABLE B — BAROMETER CORRECTION TO MEAN SEA LEVEL

AIR Temp. °C	Height of Barometer above Sea Level (metres)																								
	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34

0	1.3	1.4	1.5	1.6	1.8	1.9	2.0	2.2	2.3	2.4	2.5	2.6	2.7	2.8	3.0	3.1	3.2	3.3	3.6	3.7	3.8	3.9	4.0	4.1	4.3
+10	1.2	1.3	1.4	1.5	1.7	1.8	1.9	2.0	2.1	2.3	2.4	2.5	2.6	2.7	2.9	3.0	3.1	3.2	3.3	3.5	3.6	3.7	3.8	3.9	4.1
20	1.2	1.3	1.4	1.5	1.6	1.7	1.8	1.9	2.0	2.2	2.3	2.4	2.5	2.6	2.8	2.9	3.0	3.1	3.2	3.4	3.5	3.6	3.7	3.8	4.0
30	1.1	1.3	1.4	1.5	1.6	1.7	1.8	1.9	2.1	2.2	2.3	2.4	2.5	2.6	2.7	2.8	2.9	3.0	3.2	3.3	3.4	3.5	3.6	3.7	3.8

Common Errors in Coded Pressure

- AP too low - not using table with PAB?
- AP too high - over pressurised by AC?
- AP too high - using wrong height above MSL?
- AP inaccurate - not using calibrated barometer?
- AP inaccurate - coding errors

Barometer Comparisons on Foreign VOS Ships

Find out the Barometer Type and Setting before making the comparison

- Is it a PAB with MSL Correction Table?
- Is it an Aneroid set to MSL?
- Is it an Aneroid set to station level and used with a MSL correction table?

Comparison

Must compare like with like

- After comparison, calibration label issued must not be ambiguous
- Ship's Officer must understand how any correction is to be applied

Performance Monitoring

Why monitor?

- Monitoring Real Time SHIP data enables errors to be identified and corrected ensuring that Forecasters and Forecast Models are presented with the most accurate data.

What to Monitor

- RECEIPT OF OBs
- QUALITY OF OBs

Concentrate on quality not quantity

Monitoring Receipt of OBs

Checking receipt of Obs from National VOS shows health of programme

- Monthly check for receipt of all callsigns in NZ VOS
- Follow up ships identified as sending few or no OBs

Reasons for Few or Missing OBs

- Callsign change
- Transmission to wrong station
- Error in transmission format or coding
- Obs programme has lapsed
- Ship is in port or dry dock
- Ship has been sold or scrapped

Following up Missing OBs

Contact Ship

- If sending OBs - check callsign and transmission format to find reason for the non-delivery
- If OBs lapsed encourage restart
- If ship sold try to recover met instruments

Monitoring OBs Quality

Tools:

- PMO access to Real Time GTS SHIP OBs
- Automated computer QC - manual editing
- Forecaster & Data Entry feedback
- Daily summary of OBs with coding errors
- UKMO monthly Monitoring Stats
- WMO 6 monthly Monitoring Stats

Fixing Errors in OBs

- Visit or Email ships with persistent errors
- Be tactful
- Enlist assistance of overseas Met Service for ships that are unknown or can't be contacted
- Monitor new recruits to stop bad coding habits forming

Summary of Key Factors which make PMO Effective

- Visiting
 - Preparedness, Access to realtime GTS OBs
- Recruitment
 - Follow up
- Baro comparisons
 - Determining baro setting, unambiguous labels
- Performance Monitoring
 - Constant checking

PMO Role

- Is unique
- Work is interesting and varied
- Job is challenging

PMOs efforts directly impact on the quality
& quantity of OBs from Ships

WE CAN MAKE A DIFFERENCE!
