# *Complex risk scenarios*

- *High quality data required for beach management*
  - *Strategic planning*
  - *Operational management*
  - *Planning new schemes*
  - *Performance evaluation*

[www.Channelcoast.org](http://www.Channelcoast.org)

# Vision

- *Promote, inform and integrate the operational monitoring requirements of: regional overview; shoreline management plans; coastal strategies, and individual schemes, between the limits of the boundaries of regional cells 4 and 5*

# *Wave climate for flood and coastal defence in the UK*

- *Design conditions*
  - *Shallow water sites*
    - $H_s$ ,  $T_z$ ,  $q$ , *spectral shape*
  - *Time series*
  - *Probability distributions*
  - *Extreme events*
  - *Joint probability waves and tides*

[www.Channelcoast.org](http://www.Channelcoast.org)

# Time series

- *Beach plan shape models*
- *Longshore transport rates*

[www.Channelcoast.org](http://www.Channelcoast.org)

# *Time series*

- *Coastal flood  
forecasting*
- *Event analysis*

[www.Channelcoast.org](http://www.Channelcoast.org)

# ***Structure design***

- ***Rock structures - stability***
  - ***Extreme events***
    - ***Hs, Tz,***

[www.Channelcoast.org](http://www.Channelcoast.org)

# *Overtopping*

- *Extreme events*
  - *Period*
  - *Steepness*
  - *Water level*

[www.Channelcoast.org](http://www.Channelcoast.org)

# *Beach recharge design*

- *Extreme conditions*
  - *Cross shore ( $H_s$ ,  $T_z$ , spectral shape)*
- *Wave climate*
  - *Morphological evolution*
  - *Longshore transport ( $H_s$ ,  $T_z$ ,  $q$ )*

[www.Channelcoast.org](http://www.Channelcoast.org)

# Wave climate UK

- **Offshore**
  - **HINDWAVE**
    - *Wind wave hindcast*
  - **Met office wave models (since 1986)**
    - *Second-generation global and regional wave models*
  - **Measured wave data (supplementary)**
- **Nearshore**
  - **Transformation models**
  - **Measured wave data (supplementary)**

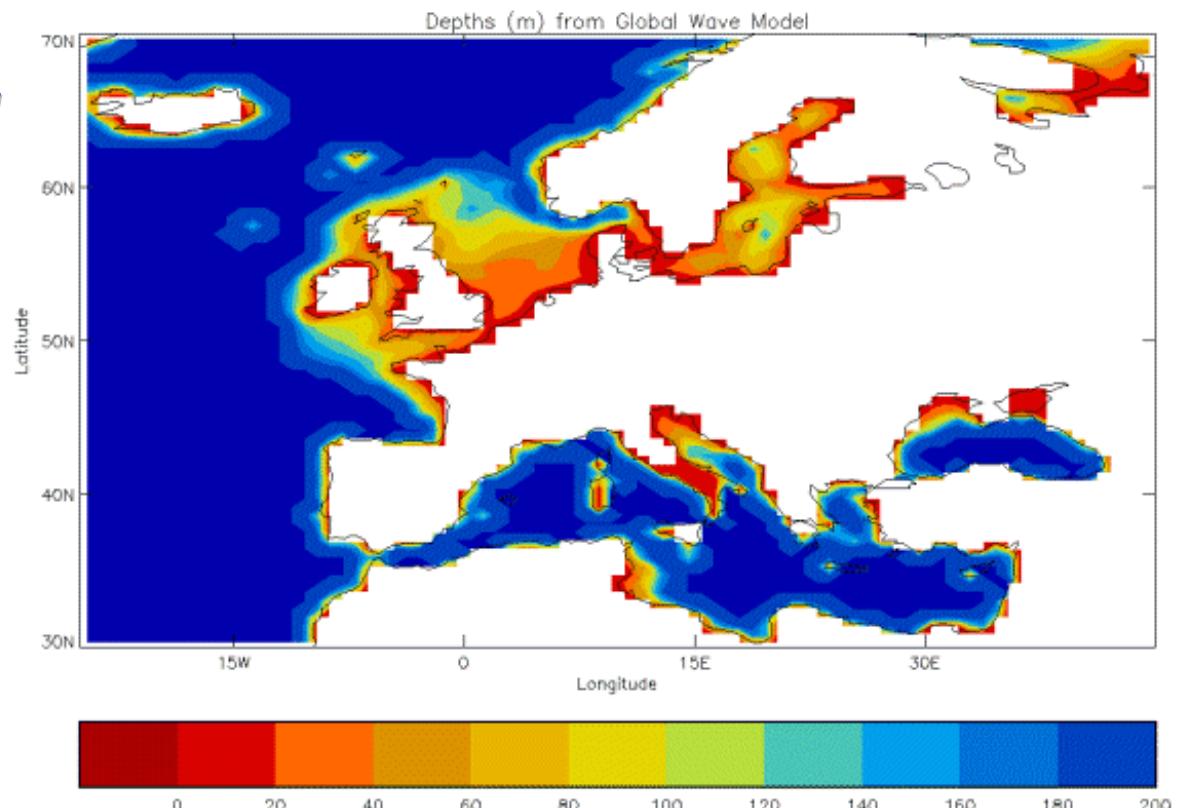

# *Objectives*

- *Identify differences between the Met office hindcast and measured buoy data*
- *Are the differences significant in shoreline management terms?*
- *Feedback to Met Office model developers for model improvement*

# Met Office Wave Models

- **Second-generation global and regional wave models**
  - **Global**
    - $5/9^\circ$  longitude
    - $5/6^\circ$  latitude
  - **European 35km**
  - **UK waters**
    - 12km
    - $1/9^\circ$  longitude
    - $1/6^\circ$  latitude

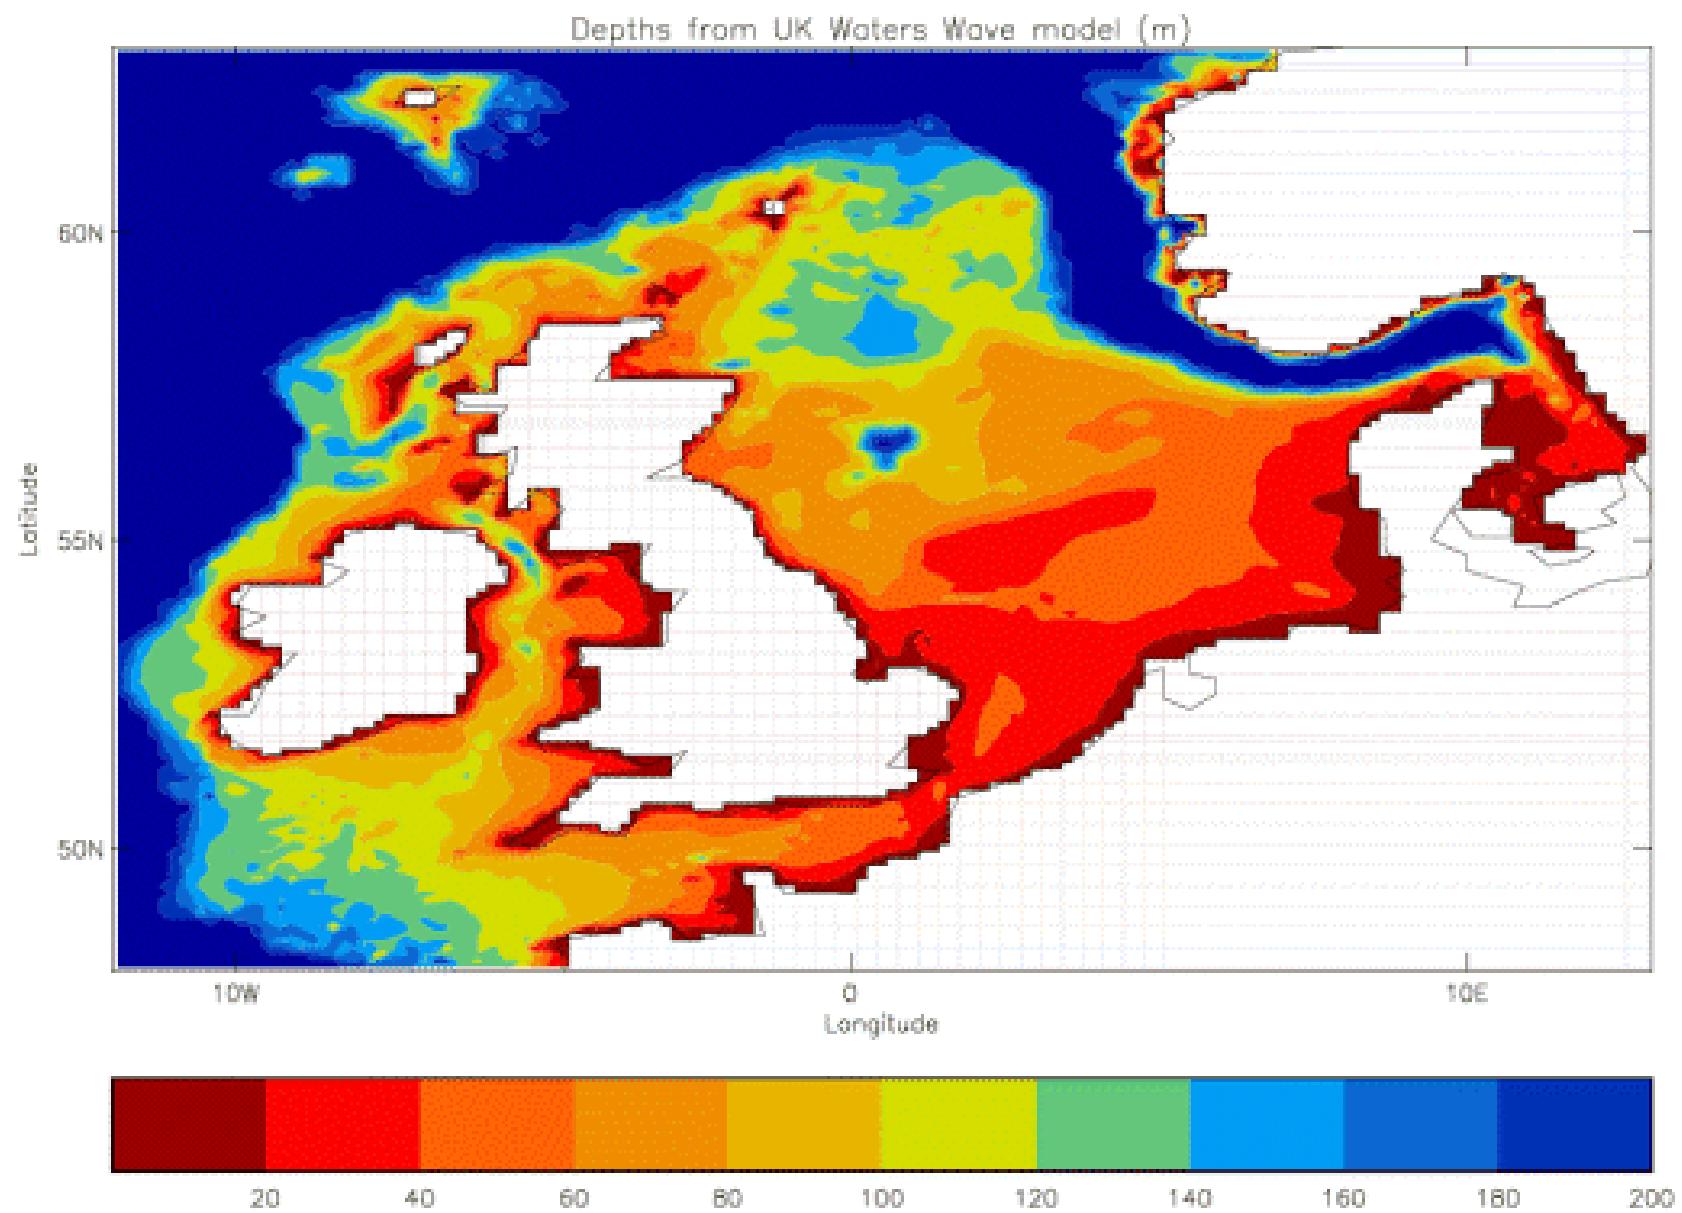

[www.Channelcoast.org](http://www.Channelcoast.org)

# *European wave model*

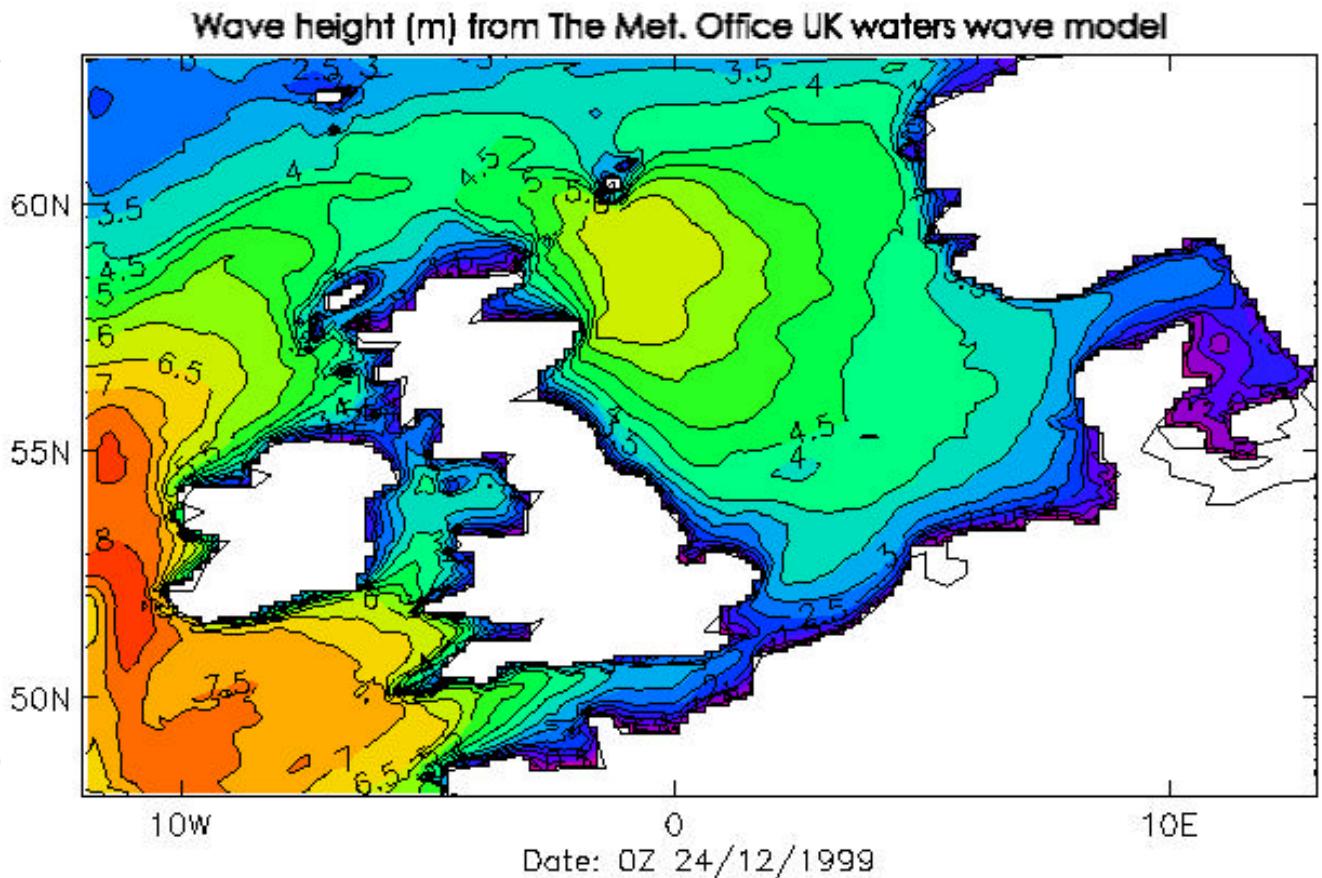

- *boundary data from the global wave model at the open boundaries*
- *hourly surface winds from global and mesoscale numerical weather prediction (NWP) models*
- *region wide hindcast at selected grid points since 1986*

# UK Waters model

- ***shallow-water physics,***
  - ***bottom friction, refraction shoaling***
- ***time-varying currents on the waves***
- ***Regional hindcast since 2000***

[www.Channelcoast.org](http://www.Channelcoast.org)

# *Data sources*

- *Synthetic data*
  - *Time series data for Met-office UK model at selected sites*
  - *Shallow water transformations using time series*
- *Field measurements*
  - *Existing wave recorders*
  - *New wave recorders*
  - *Primarily high risk locations*

## Tide data

Tide data is already collected at several sites within the region. Data from these sites will be integrated within the programme during 2003. Real time data trials will take place using the Lymington site during March 2003.

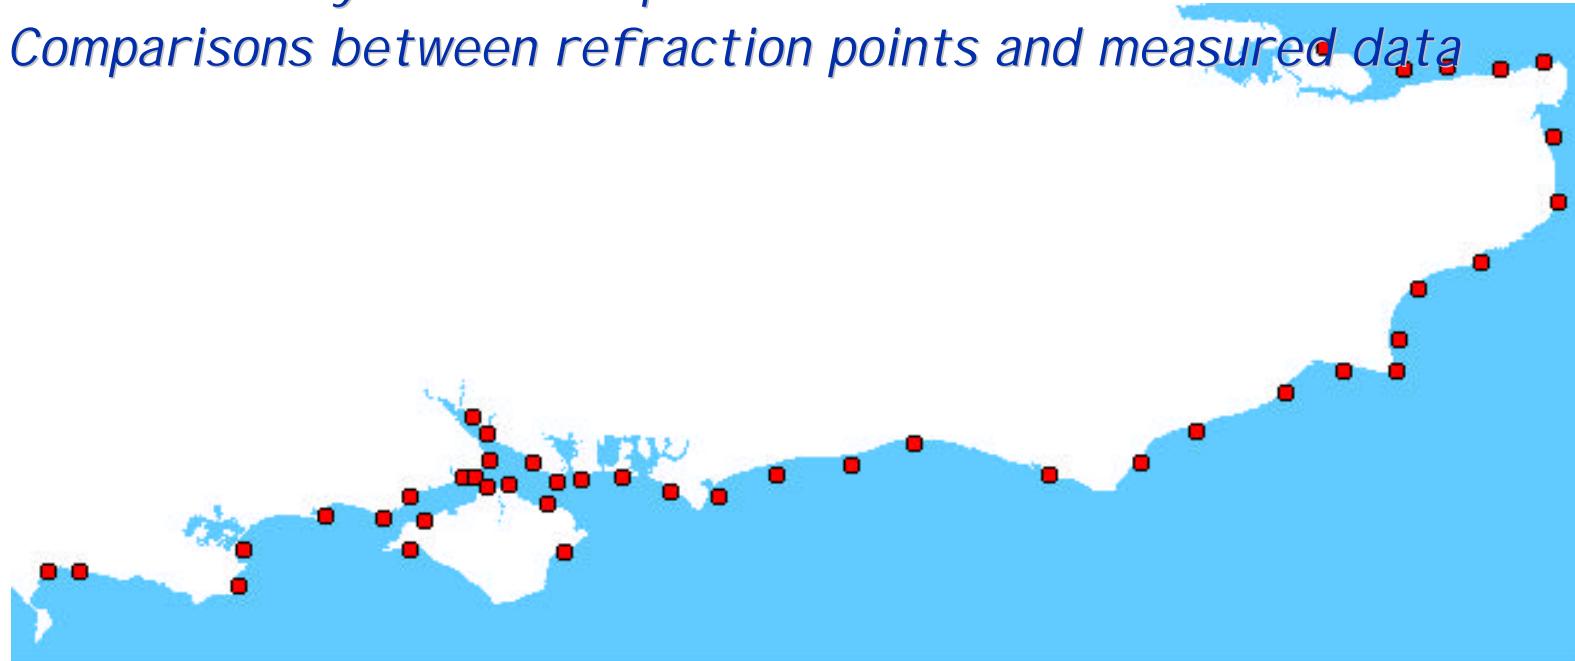

Existing sites	Instrument	Owner

- ***Existing tide gauges quality checked, and upgraded***
- ***Selected new sites added***
- ***National tide gauge network station used***
- ***Real time links to existing stations,***
- ***Long term statistics updated annually***

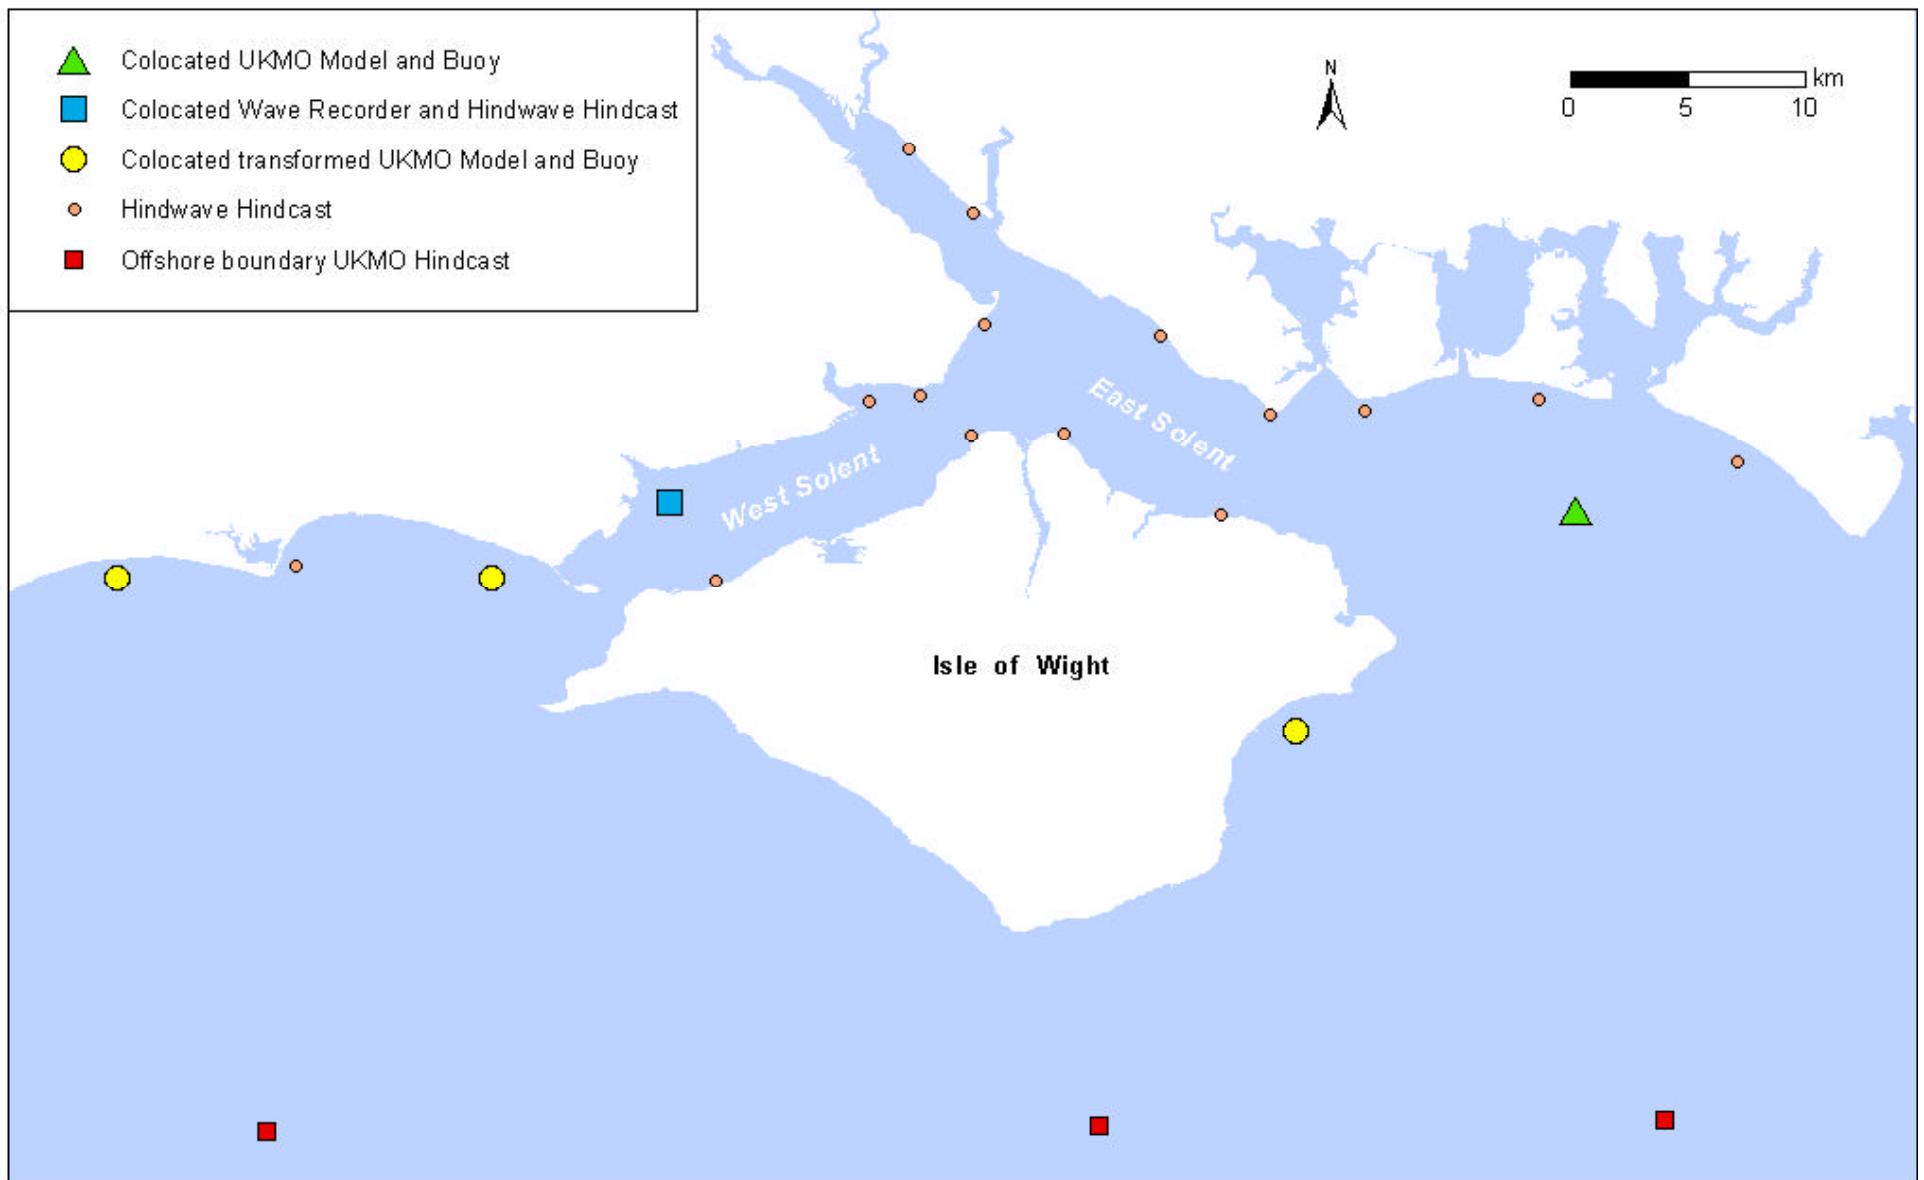

# **Near shore synthetic wave data**

- 42 near-shore wave prediction points established
- Time series since 1986 all stations
- Probability distributions  $H_s$ ,  $T_z$ , direction each site
  - Offshore wave data UKMO
  - Monthly updates and annual model re runs
- Extreme analysis annual updates
- Comparisons between refraction points and measured data

# Event analysis

(12b) Hayling Time Series Data

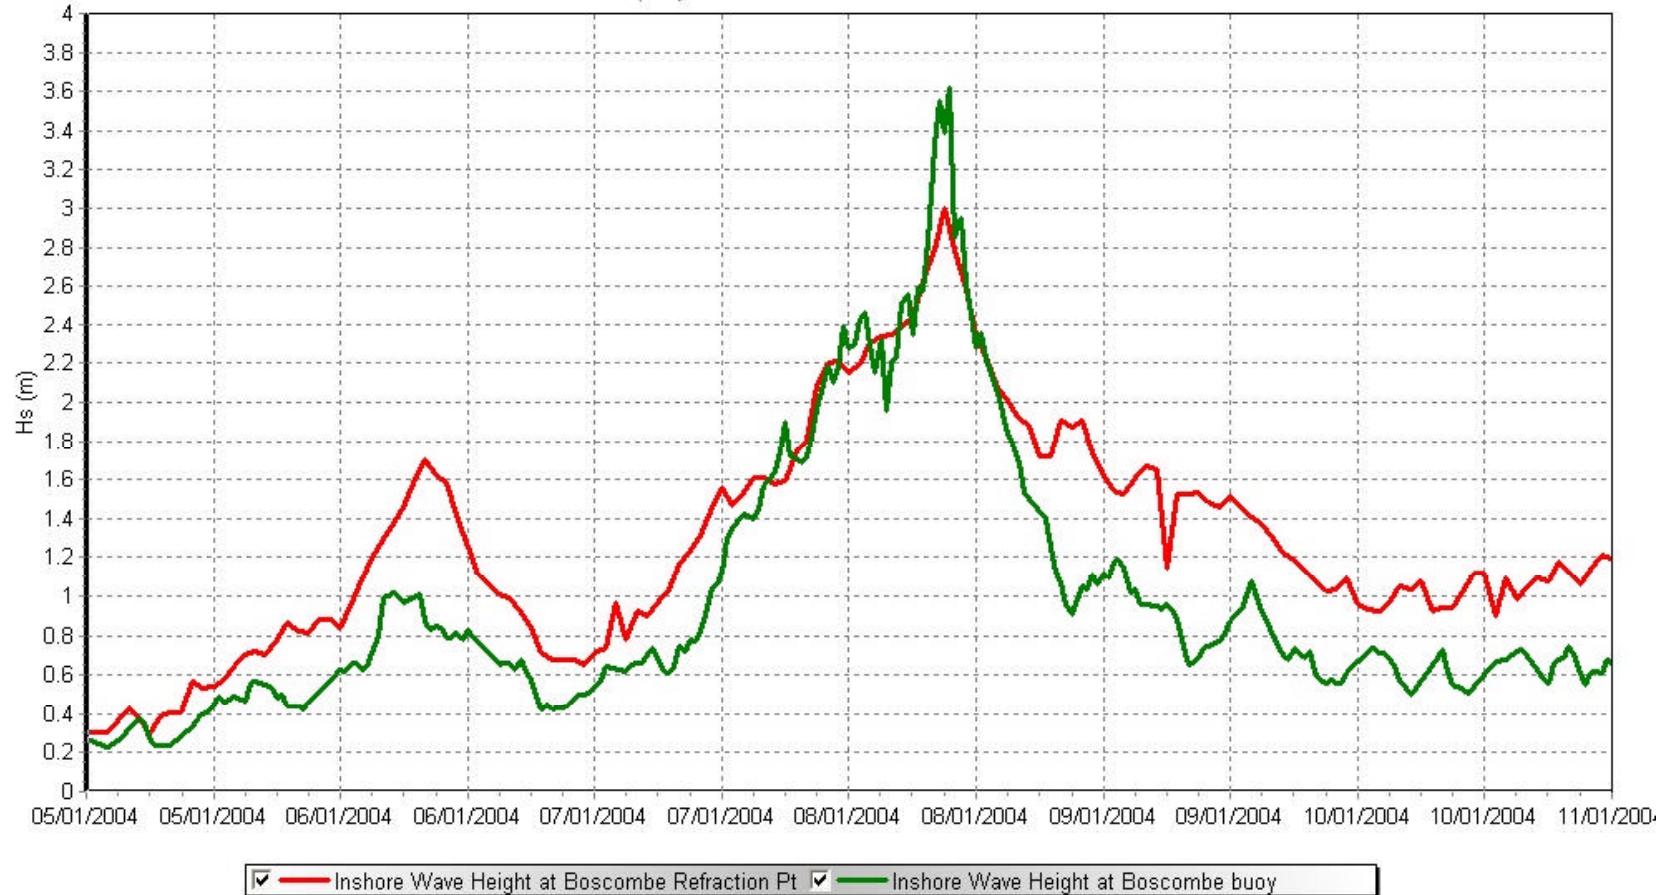

- Better description of time series at buoy
- Co-located and transformed data follow similar patterns

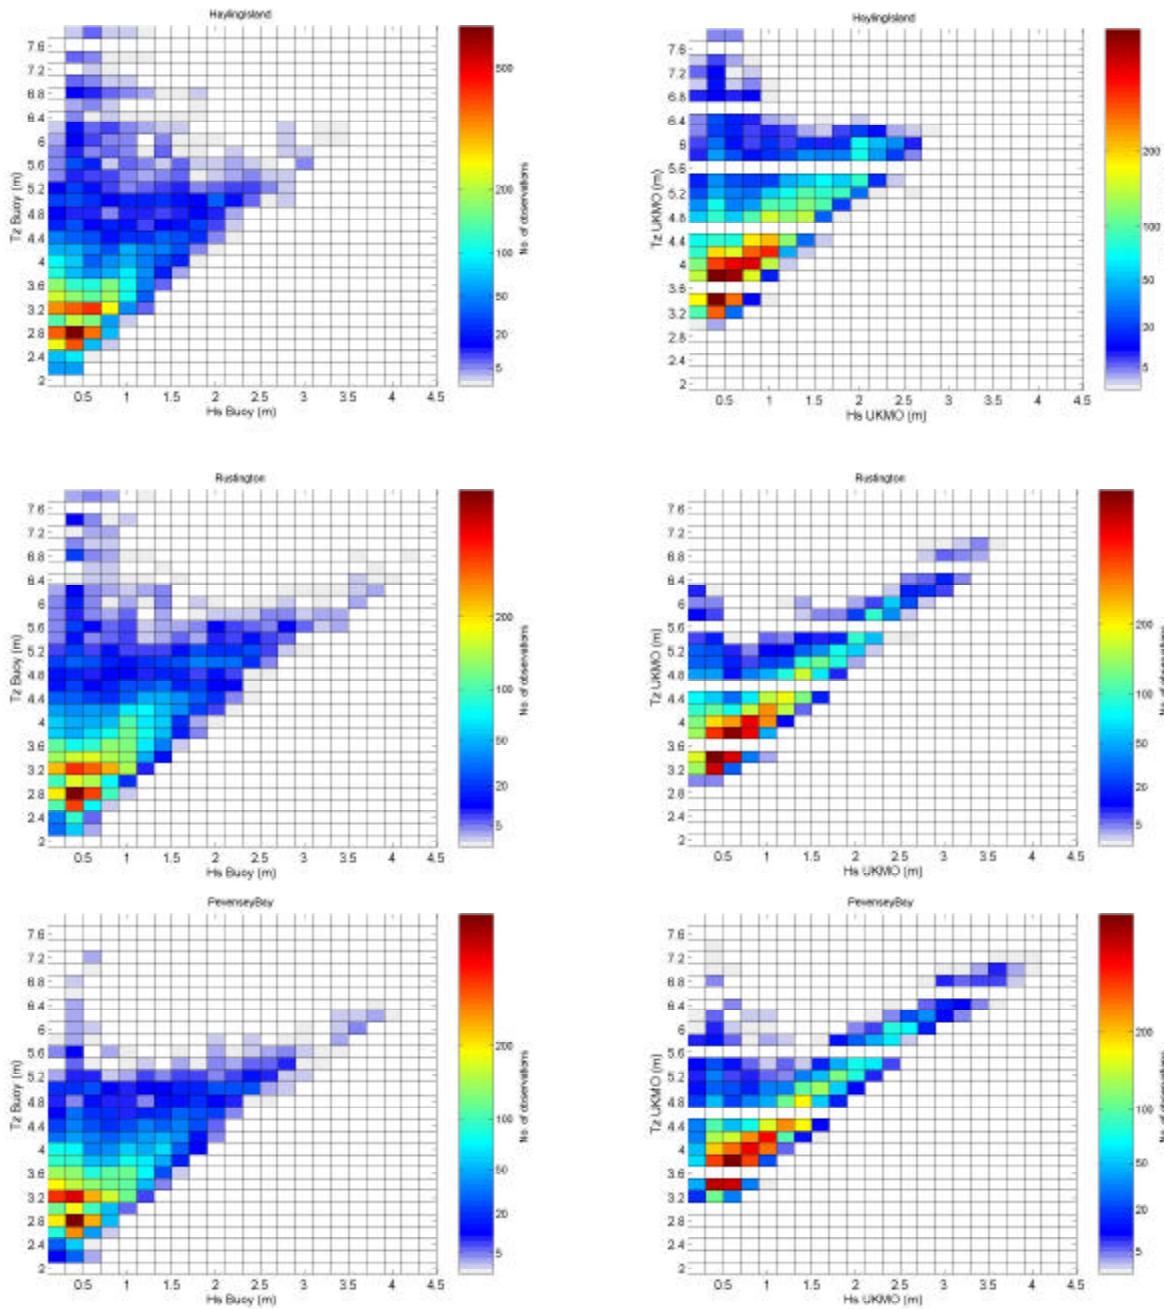

SANDS

(12a) Boscombe Time Series Data

- *Under prediction of extremes*
- *Over estimation of  $H_s < 2m$*
- *Good timing of peaks*

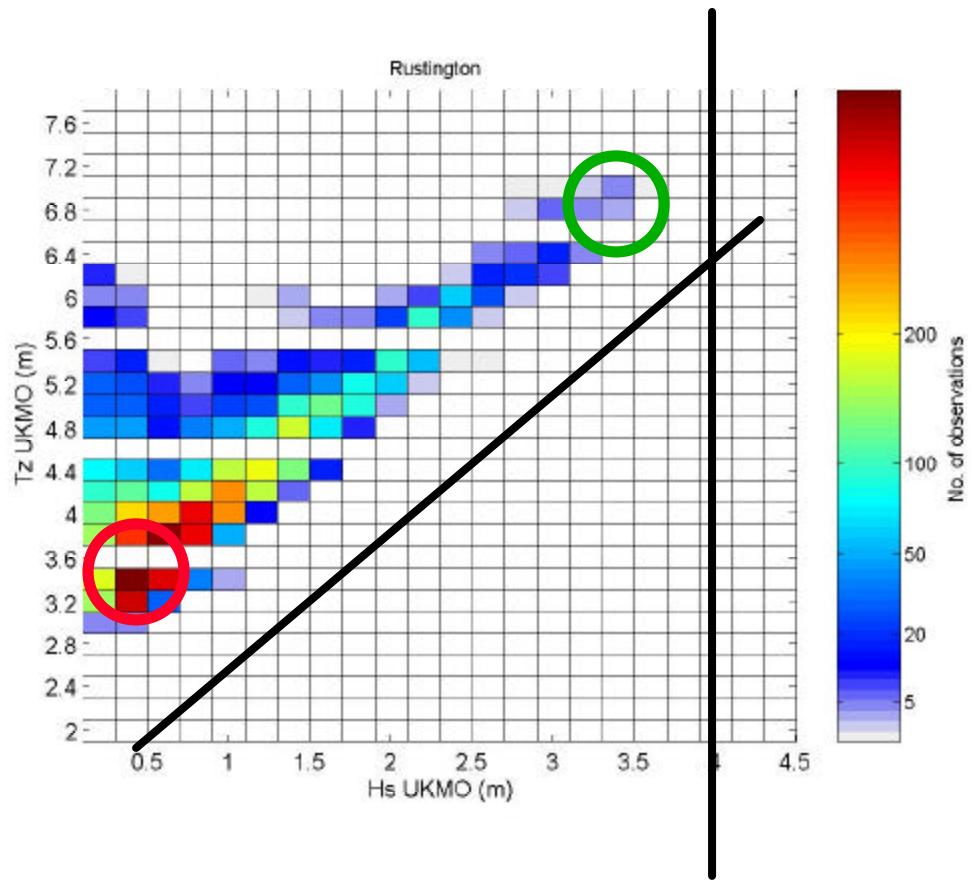

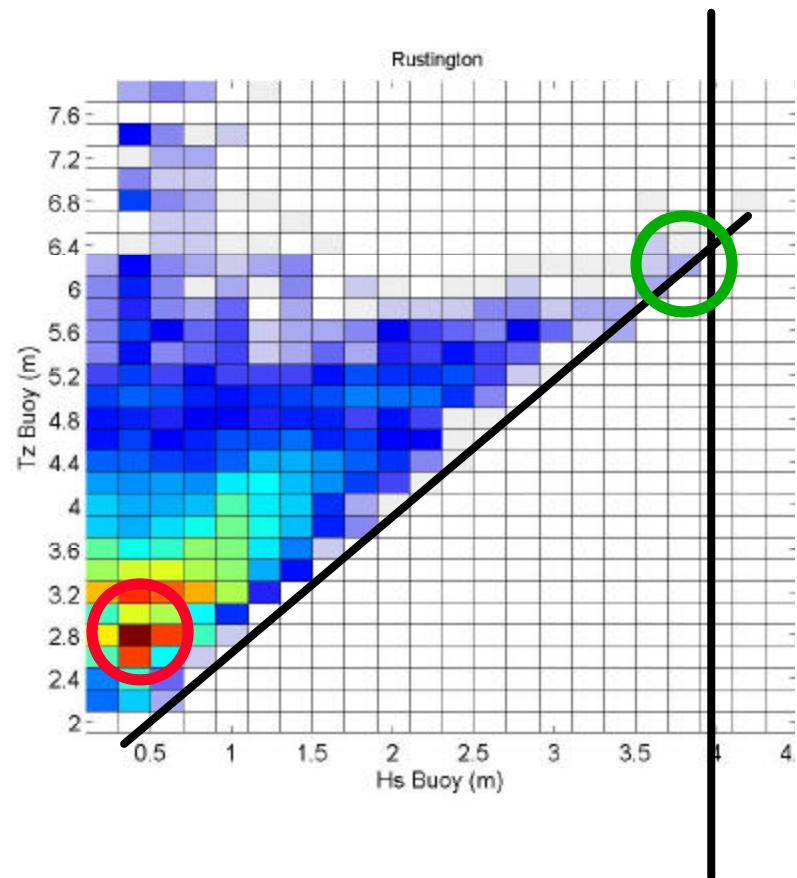

# Wave steepness

[www.Channelcoast.org](http://www.Channelcoast.org)

# *Impact on wave run-up and profile response*

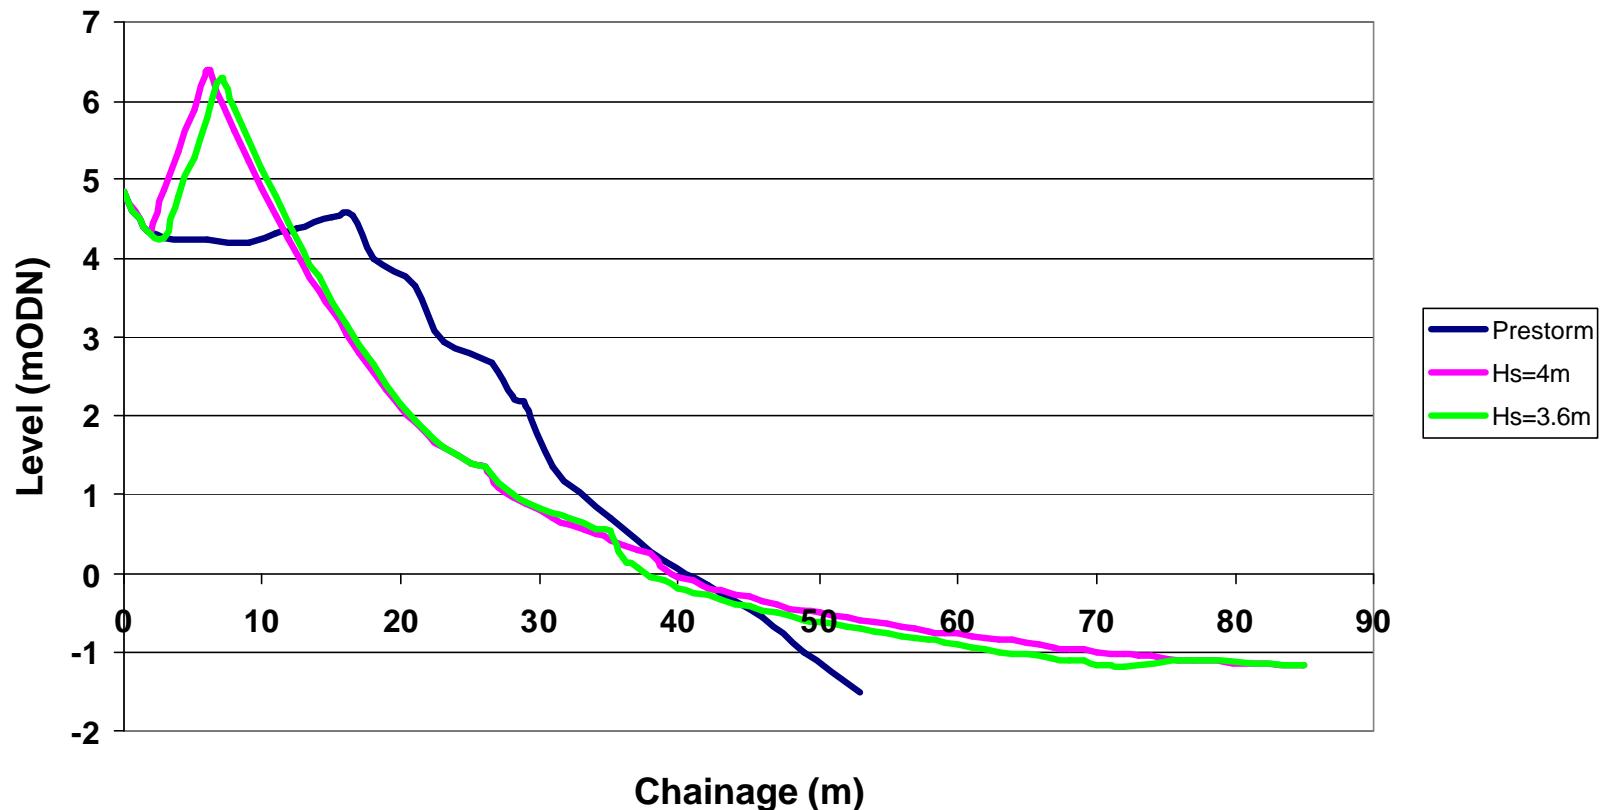

- *Variation in  $H_s$*
- *Variation in  $T_z$*

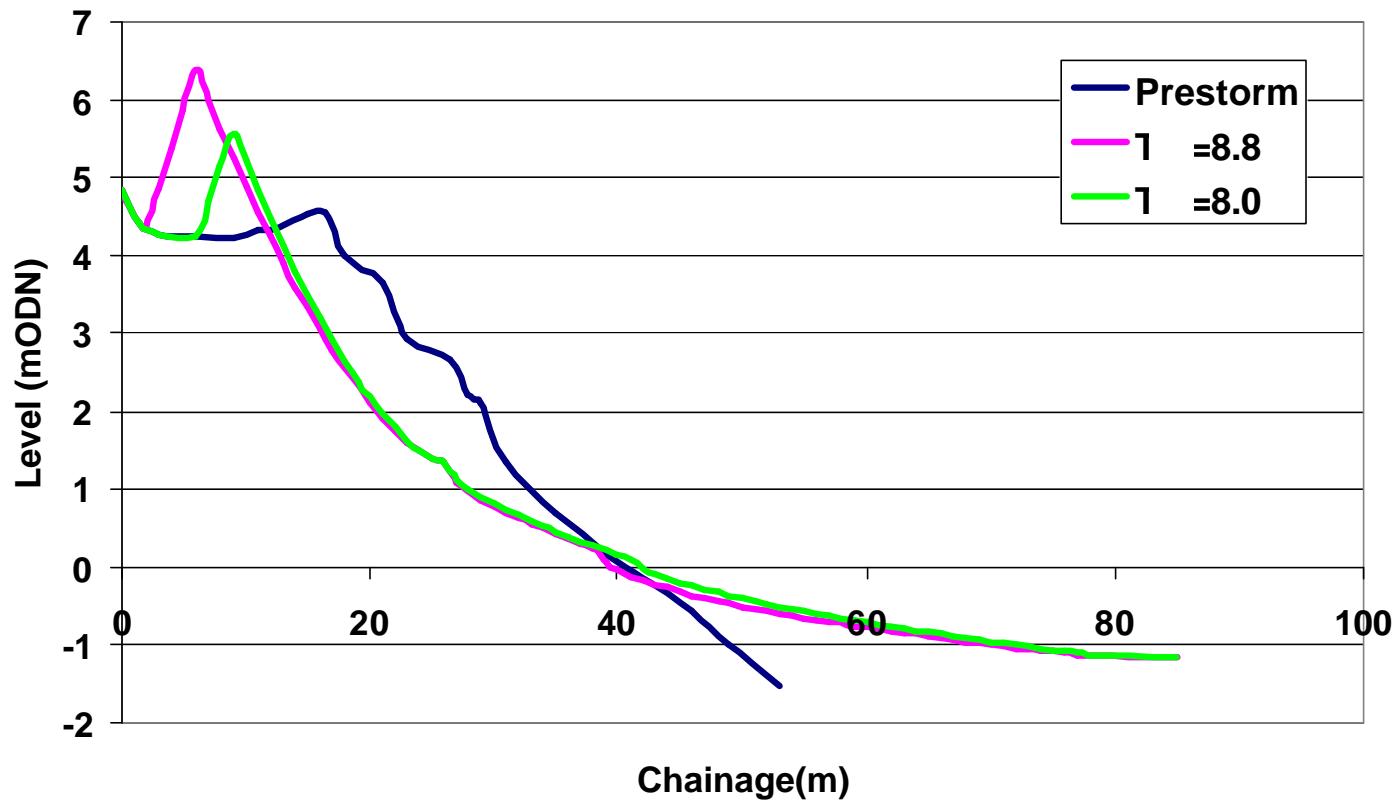

[www.Channelcoast.org](http://www.Channelcoast.org)

## *Empirical profile response modelling - impact of 10% change in $H_s$*

## *Empirical profile response modelling - impact of 10% change in $T_z$*

# *Impact on armour stability*

## *Plunging waves*

$$H_s/D D_{n50} = 6.2 P^{0.18} (S/\ddot{O}N_z)^{0.2} x_m^{-0.5}$$

$$H_s=3.6m \quad W_{50}=4.6t$$

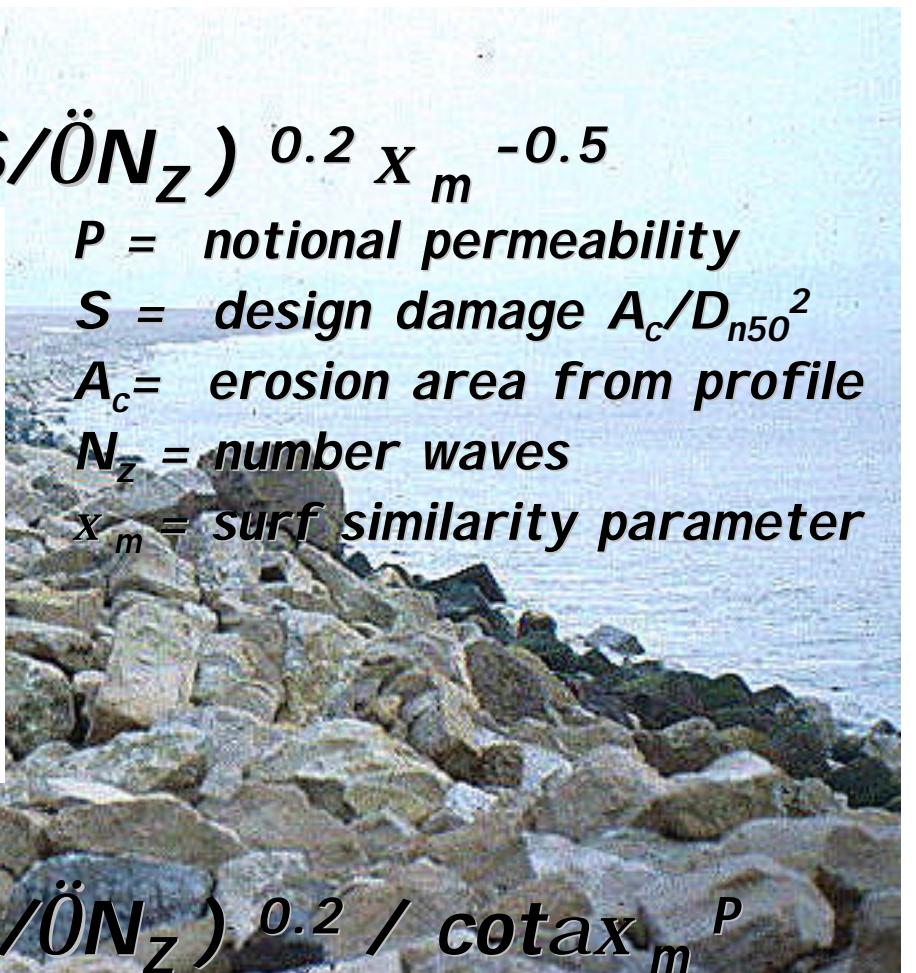

$$H_s=4.0m \quad W_{50}=6.2t$$

*Constants*

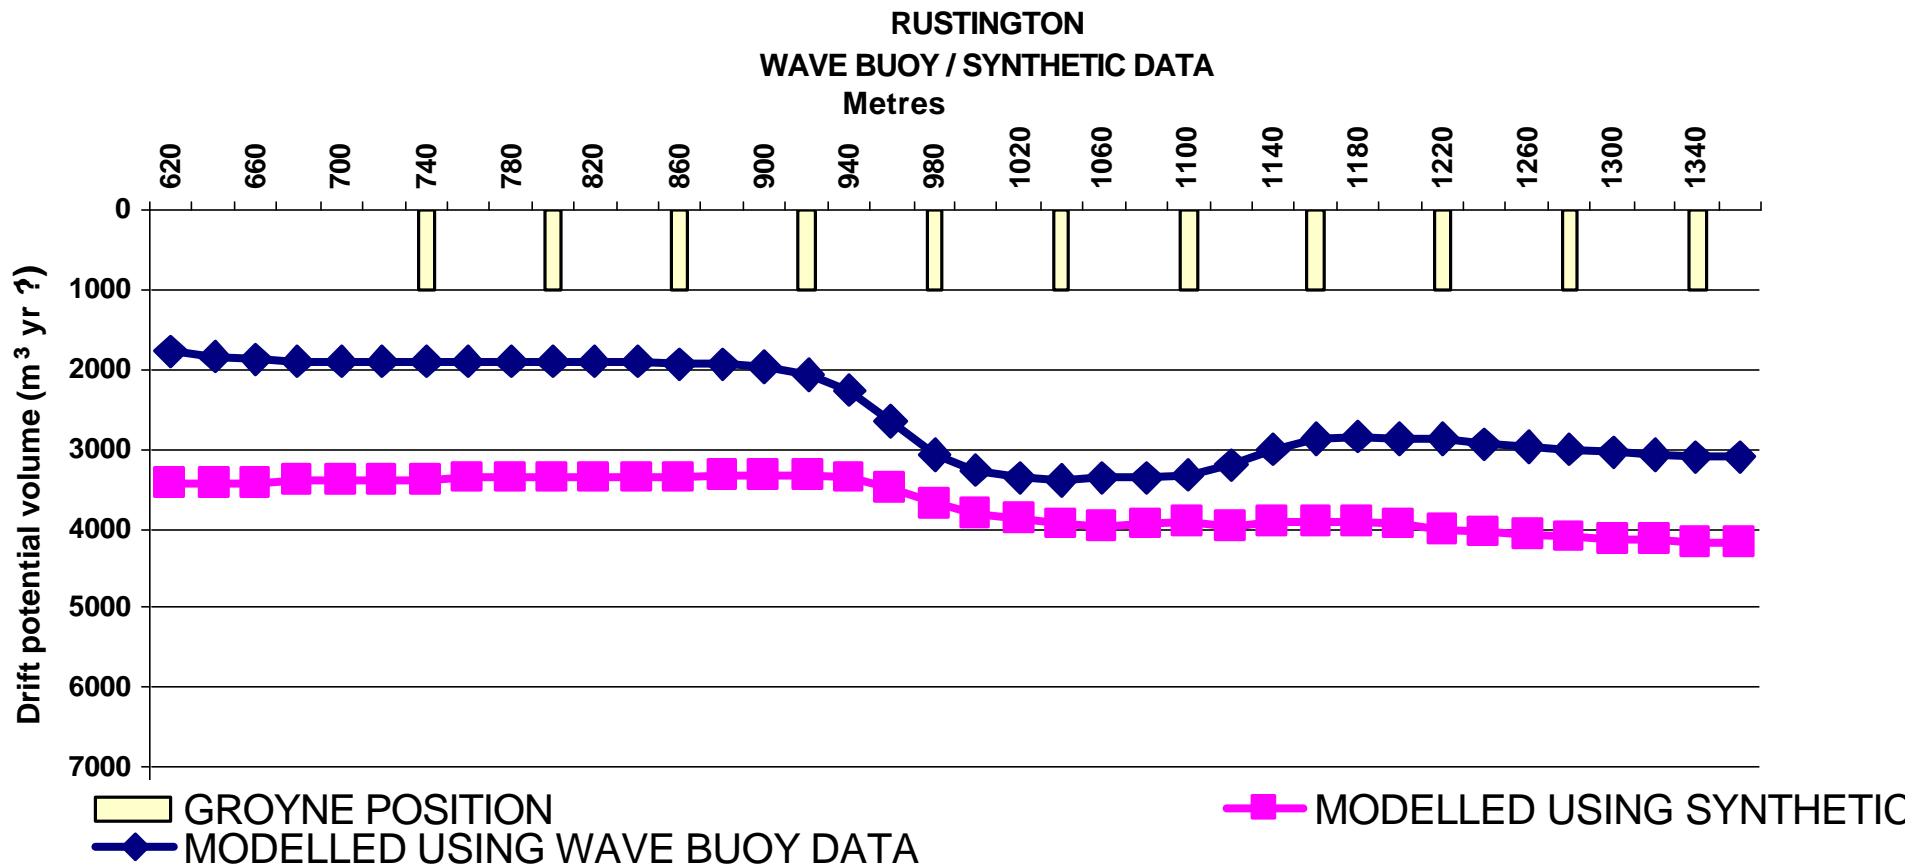

$$T_z=9.5s, P=0.3, \cot\alpha=3$$

## *Surging waves*

$$H_s/D D_{n50} = 1.0P^{-0.13}(S/\ddot{O}N_z)^{0.2} / \cot\alpha x_m^P$$

# *Sediment transport*

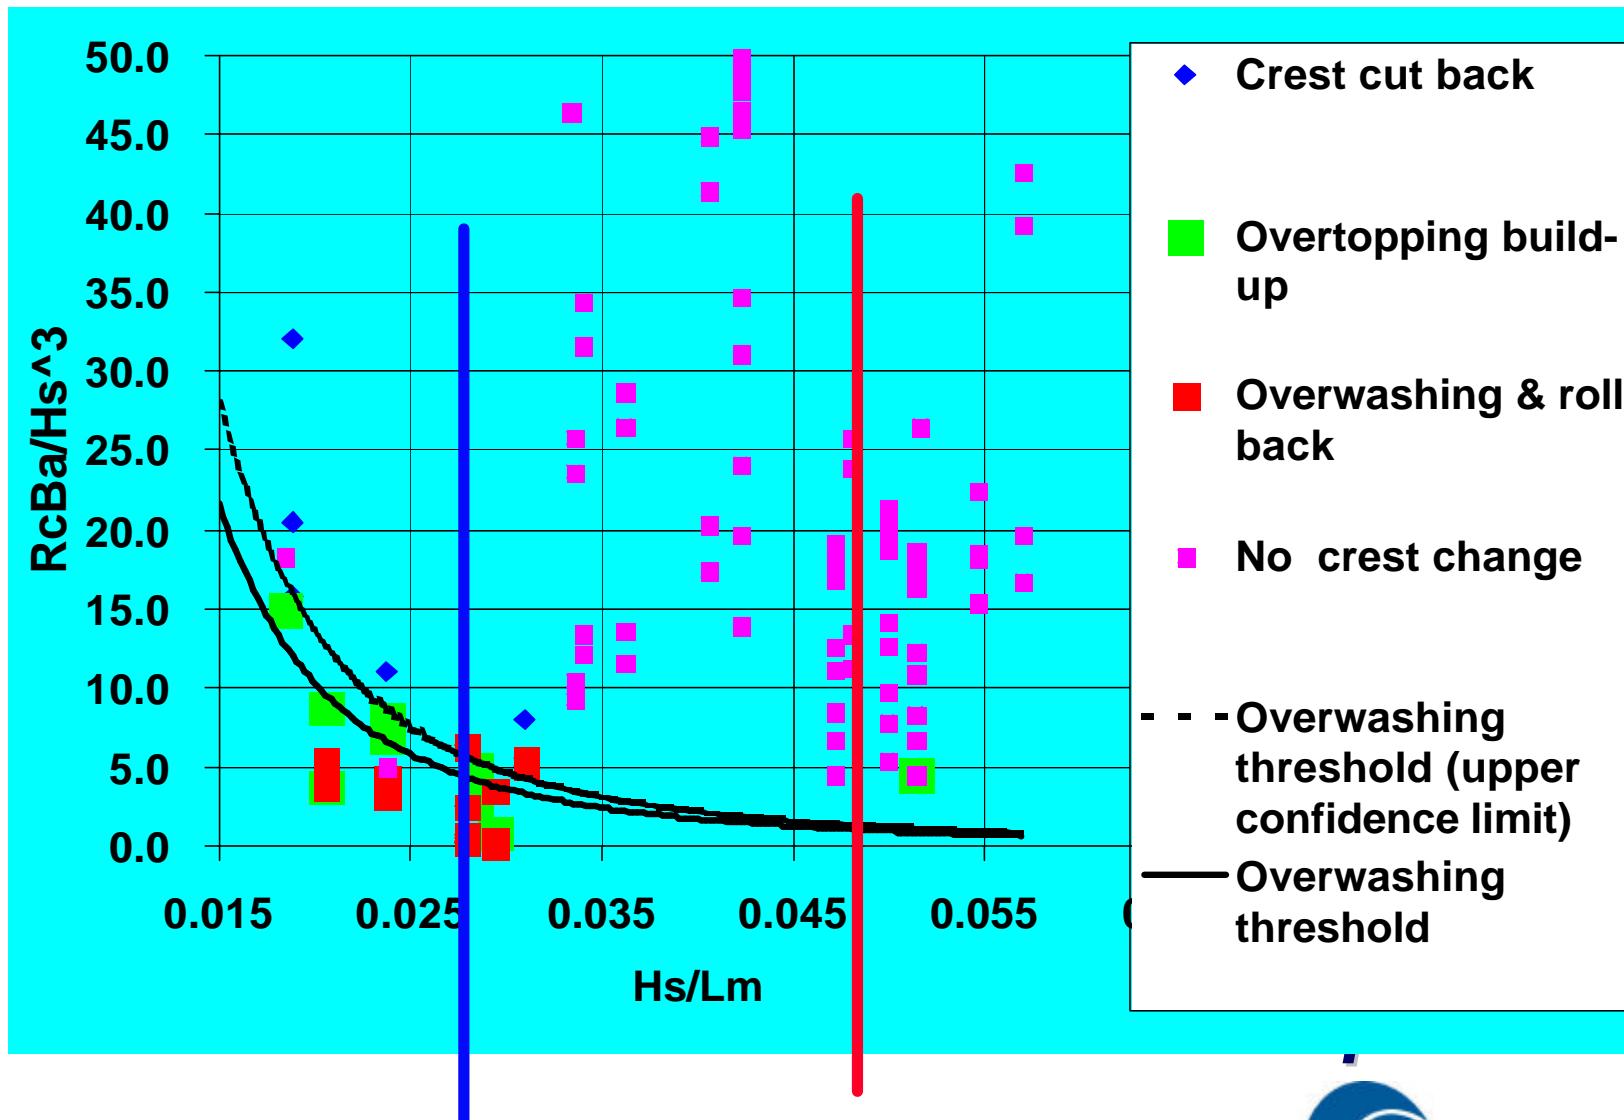

# *Identification of critical conditions to prevent barrier breaching*

[www.Channelcoast.org](http://www.Channelcoast.org)

# Wave steepness

# *Impacts of period on runup and profile response*

[www.Channelcoast.org](http://www.Channelcoast.org)

# *Concluding observations*

- *Hs over-predicted for Hs<2m*
- *Hs for extremes under-predicted*
- *Tz typically over-predicted*
- *Direction scattered – possibly related to buoy or phasing*
- *Significant shoreline management impacts*

# *Future development*

- *Conduct systematic statistical analysis*
- *Refine analysis to include longer clean data sets*
- *Analyse spectral data sets*
- *Proposals to improve Met Office model*
  - *Standardise output to 1hour*
  - *Improve extreme conditions*
  - *Examine wind input from NWP models*
  - *Improve frequency resolution*
