

ARGOS-3 PP – Phase 1 & 2 Test results

DBCP 27 Meeting - Geneva September 2011

Argos-3 PP

- Project decided during DBCP 24,
- Goal: 50 Argos-3 drifters / 60 were deployed
- 5 trained Manufacturers : Clearwater, Pacific, Gyre, Metocean, Marlin Yug, Technocean
- Only 4 Manufacturers involved in developments
- Two-phase Project:
- 1. Technology Transfer towards the community & evaluations,
- 2. Barometer integration and evaluations

Goals

- i. Foster developments by buoys manufacturers,
- Evaluate Argos-3 for use by the global buoy community,
- iii. Phase 1: 32 drifters offered by CLS with hourly sensor (T, P) acquisition,
- iv. Phase 2: Barometer implementation on all drifters& 28 drifters offered by CLS with hourly sensor(T, P) acquisition.

Product definition phase 1

| Manufacturers | Buoy type | Tx Management | |
|---------------|-----------|------------------------|--|
| Metocean | 5 SVP B | ACK + Pseudo (5) + HK | |
| | 5 SVP | ACK + Pseudo (5) + HK | |
| | | | |
| Clearwater | 5 SVP B G | ACK + Pseudo (3) | |
| | 5 SVP B | ACK + Pseudo (4) | |
| | | | |
| Pacific Gyre | 10 SVP | Pseudo (4) & LIFO + HK | |
| | | LIFO management | |
| | | | |
| Marlin Yug | 1 SVP | Pseudo (5) + HK | |
| | 1 SVP B | | |
| | | | |

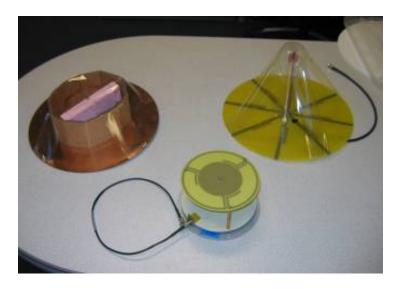

Typical Argos-3 buoy integration

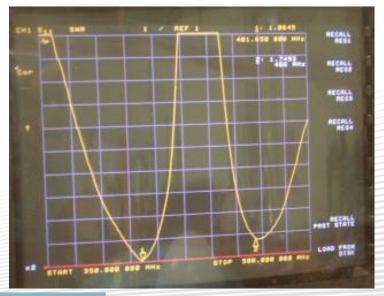

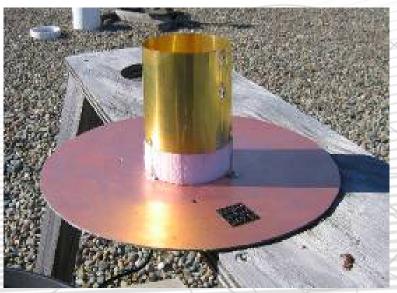

New antennas were developed

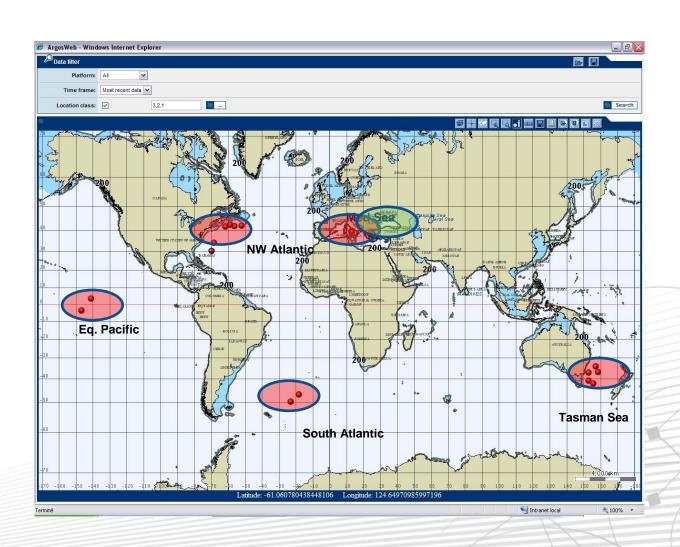

Deployment zones

Drifters were deployed

Deployment South of Majorca

Deployment South of Majorca

Product definition phase 2

| Manufacturers | Buoy type | Tx Management |
|---------------|-----------|------------------------|
| | | |
| Clearwater | 10 SVP B | ACK + Pseudo (4) |
| | | |
| Pacific Gyre | 10 SVP B | Pseudo (4) & LIFO + HK |
| | | LIFO management |
| | | |
| Marlin Yug | 8 SVP B | Pseudo (5) + HK |
| | | |

Firmware was improved to implement the Barometer.

Phase 2: Clearwater Drifters

Page 10

| Drifters | Deployment area | Working Status | |
|----------|------------------|----------------|---------------------------|
| 82540 | Not yet deployed | | |
| 82542 | Central Pacific | | |
| 82544 | Central Pacific | | |
| 82545 | Atlantic sea | | 1 week-report |
| 82546 | Atlantic sea | | 1 week-report |
| 82547 | Not yet deployed | | |
| 82549 | Central Atlantic | | |
| 82583 | South Atlantic | | No report upon deployment |
| 82584 | South Atlantic | | No report |
| 82585 | Central Atlantic | | |

Conclusion:

8 deployments,

4 drifters did report correctly.

Phase 2: Pacific Gyre Drifters

Page 1

| Drifters | Deployment area | Working status | |
|----------|-----------------|----------------|-------------------|
| 42652 | Bay of Bengal | | |
| 42658 | Bay of Bengal | | |
| 42708 | Bay of Bengal | | |
| 42716 | South Atlantic | | |
| 42737 | South Atlantic | | Irregular reports |
| 42750 | South Atlantic | | |
| 42755 | South Atlantic | | |
| 42757 | South Atlantic | | |
| 42758 | South Atlantic | | |
| 42759 | South Atlantic | | |

Conclusion:

10 deployments

9 drifters did report correctly; 1 with irregular information.

Phase 2: Marlin Yug Drifters

Page 12

| Drifters | Deployment area | Working status | |
|----------|-----------------|----------------|-------------------------------------|
| 41803 | Tasmania Sea | | |
| 41882 | Tasmania Sea | | |
| 41885 | Ligurian Sea | | shallow water deployment |
| 42957 | Tasmania Sea | | |
| 42961 | Tasmania Sea | | |
| 42964 | Tasmania Sea | | Short lifetime |
| 42965 | Med Sea | | |
| 42973 | Tasmania Sea | | Performance degradation since March |

Conclusion: 8 deployments

6 drifters did report correctly 1 had a short lifetime.

Performances on observations

Page 13

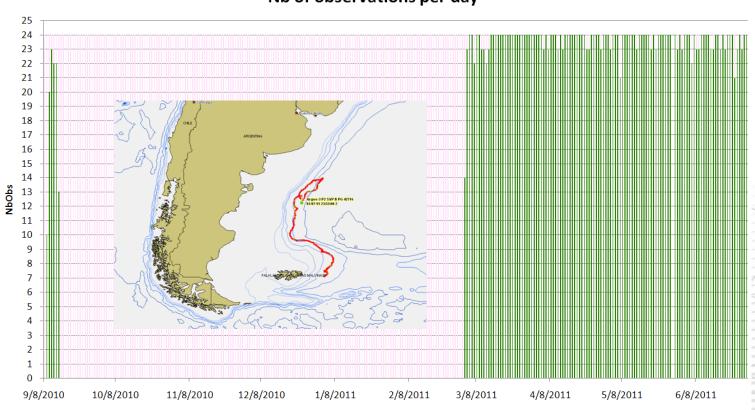

Argos-3 PP implementation was a success with a high level of performance with more than 23 Observations/day for working units over a one-year period (August 2010 – August 2011)

| Manufacturers | Nb of Hourly Observations (P, T) per day | | |
|---------------|--|--|--|
| Pacific Gyre | 23.8 | | |
| Clearwater | 23.3 | | |
| Marlin Yug | 23.2 | | |
| Metocean | 23.0 | | |

SVP B 42716

Pmt 42716 August 2010 to July 2011 Nb of observations per day

Performances over 15 days (6 drifters)

| | Nb of loc/day | Class 1 | Class 2 | Class 3 |
|---------------|---------------|----------|---------|---------|
| Before Kalman | 32 | 1317 | 1304 | 264 |
| After Kalman | 33 | 900 | 1374 | 671 |
| | | 46 > 30% | 45>47% | 9> 23% |

PP Conclusions

- Positive and constructive technology transfer,
- High performance for collecting hourly sensor acquisitions (over 98%)
- Nominal 50% reduction on Power Consumption on battery lifetime
- Optimization of the transmission leading to a better use of the satellite network and then better performances for users,
- Secured Tx (check sum control),
- Remote command to change the drifter mission,
- GPS free-system

Two new Argos-3 satellites will be added to the constellation in 2012 (MetOpB: April 2012 – Saral June 2012).

Special thanks you to:

Luca

Gary, Issac

Andy & Glen

Sergey

Tony & Emily

Shaun & Mayra

As well as all those who invested in deployments

For their investment for the Argos-3 PP
