

JCOMM Observations Programme Area (OPA)

Candyce CLARK
OPA Coordinator

SOT-V, 19 May 2009, Geneva

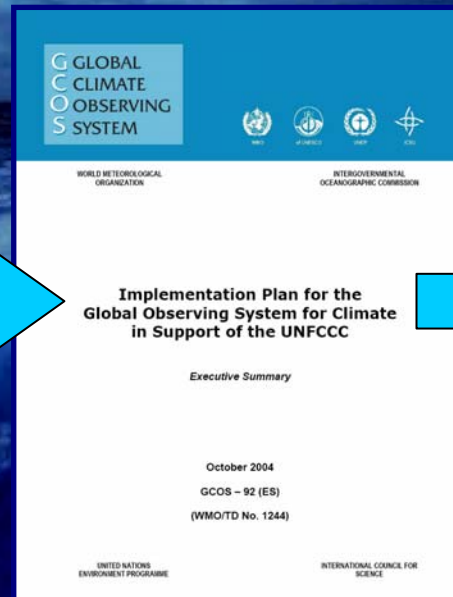

The international plan

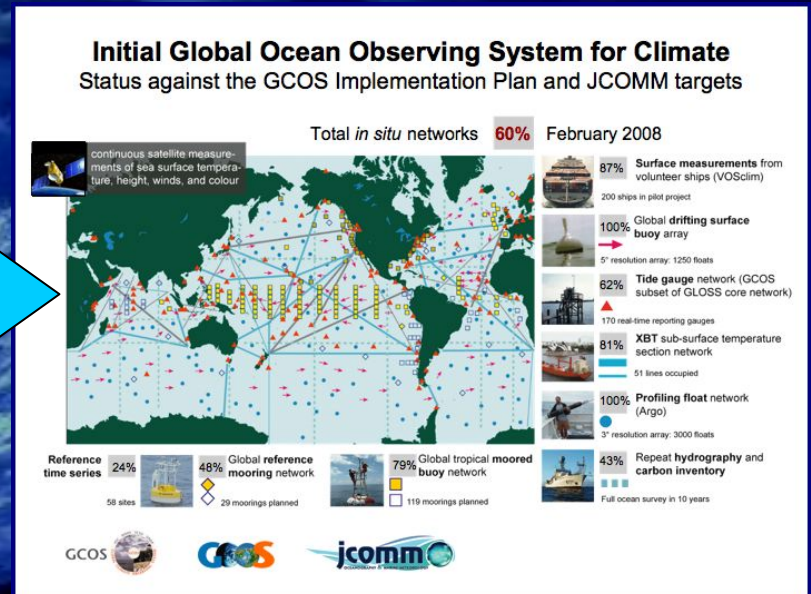

- A decade has passed since the OceanObs'99 symposium played a major role in consolidating the plans for a comprehensive ocean observing system.
- Now, for the first time in history, the world's oceans are being observed routinely and systematically.
- OceanObs'09: ensure sustainability and further development; extend present system.

1999

The organizing framework is in place: JCOMM Observations Coordination Group

All six global *in situ* implementation programs are linked internationally through WMO/IOC JCOMM coordination. **TOGETHER** they are building a global ocean observing system

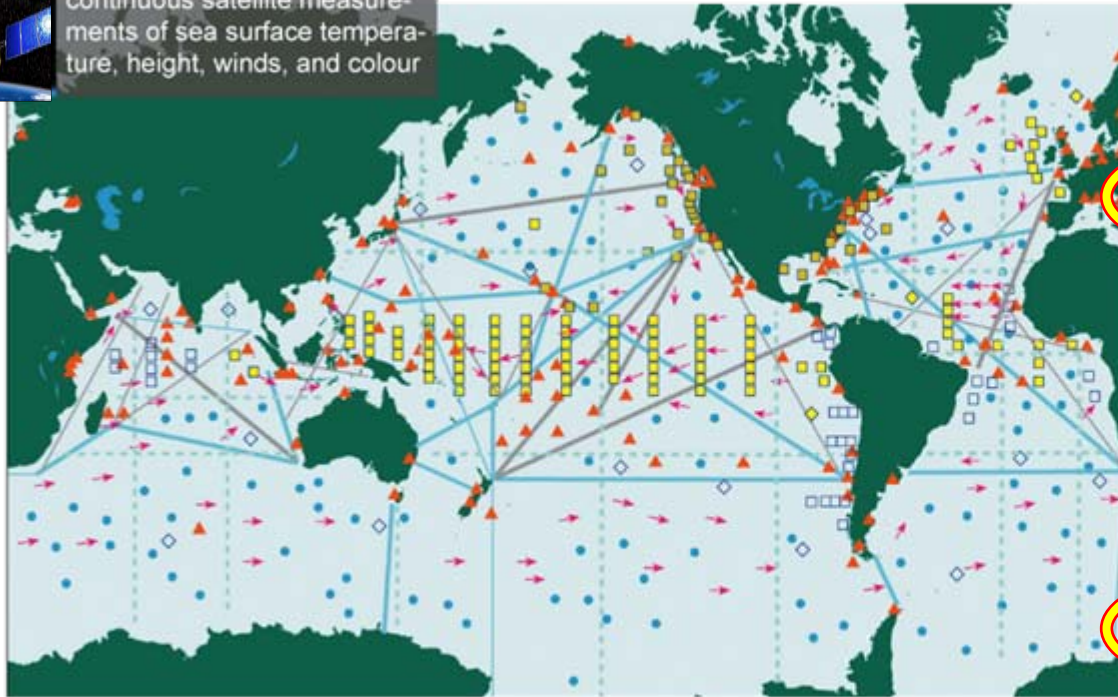

Status of the System

Initial Global Ocean Observing System for Climate

Status against the GCOS Implementation Plan and JCOMM targets

Total *in situ* networks **61%** March 2009

87% Surface measurements from volunteer ships (VOSclim)
200 ships in pilot project

100% Global drifting surface buoy array
5° resolution array: 1250 floats

66% Tide gauge network (GCOS subset of GLOSS core network)
170 real-time reporting gauges

81% XBT sub-surface temperature section network
51 lines occupied

100% Profiling float network (Argo)
3° resolution array: 3000 floats

Reference time series 54%
58 sites

48% Global reference mooring network
29 moorings planned

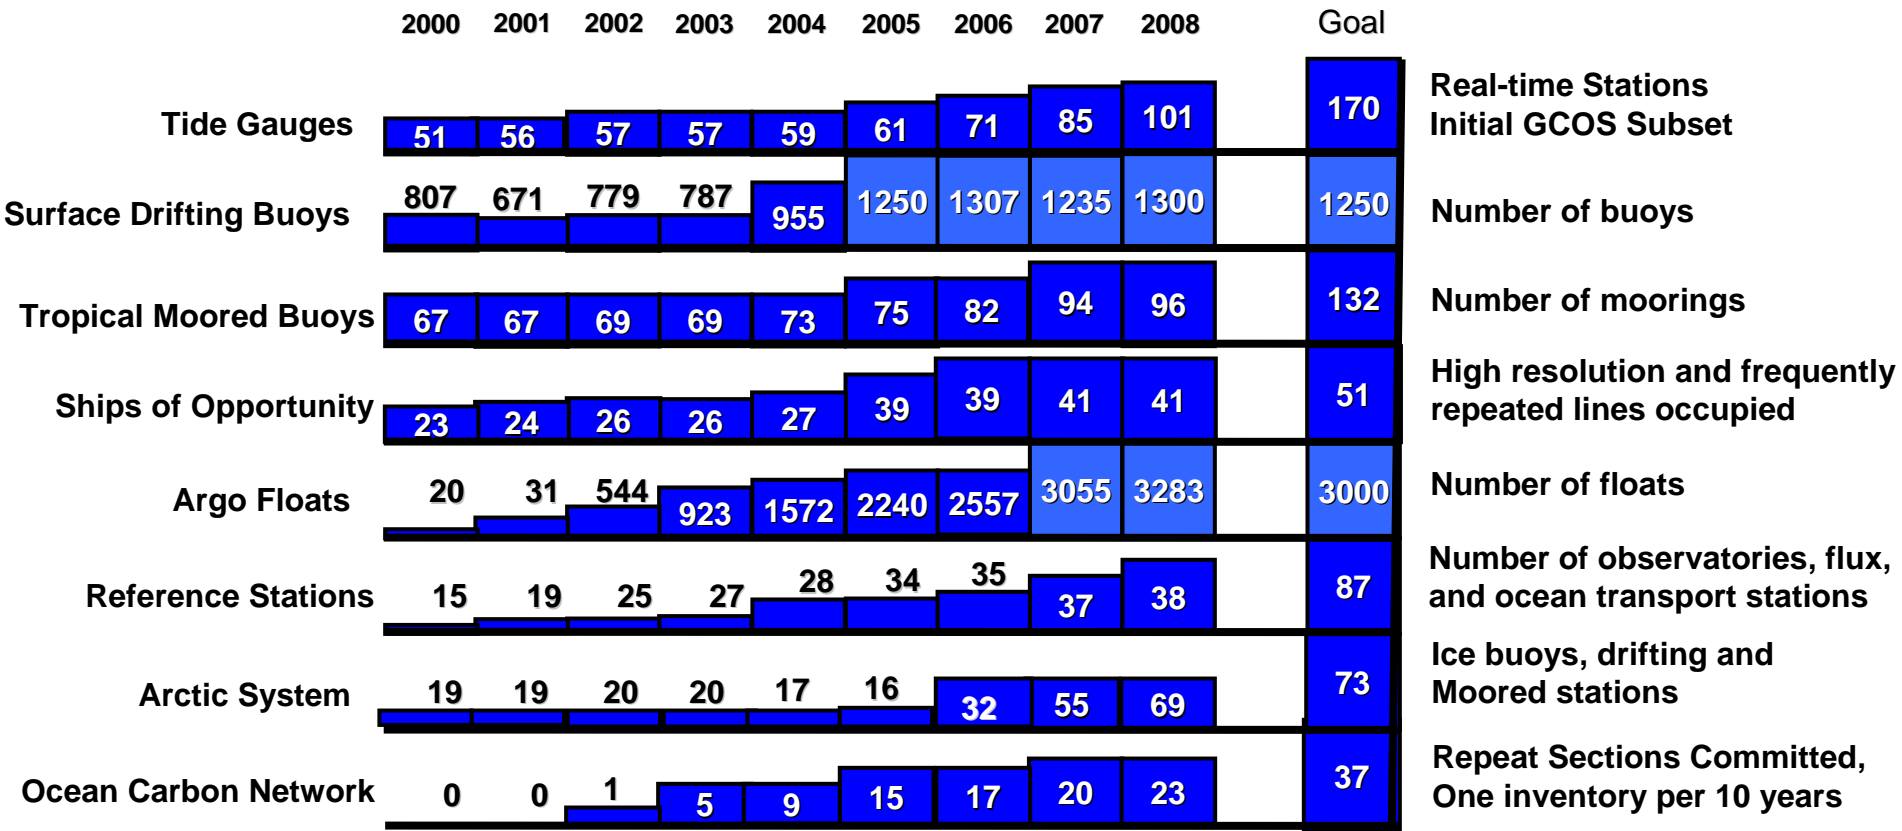

79% Global tropical moored buoy network
119 moorings planned

59% Repeat hydrography and carbon vent
Full ocean

Progress Toward Global Coverage (representative milestones)

Initial Ocean Observing System Milestones

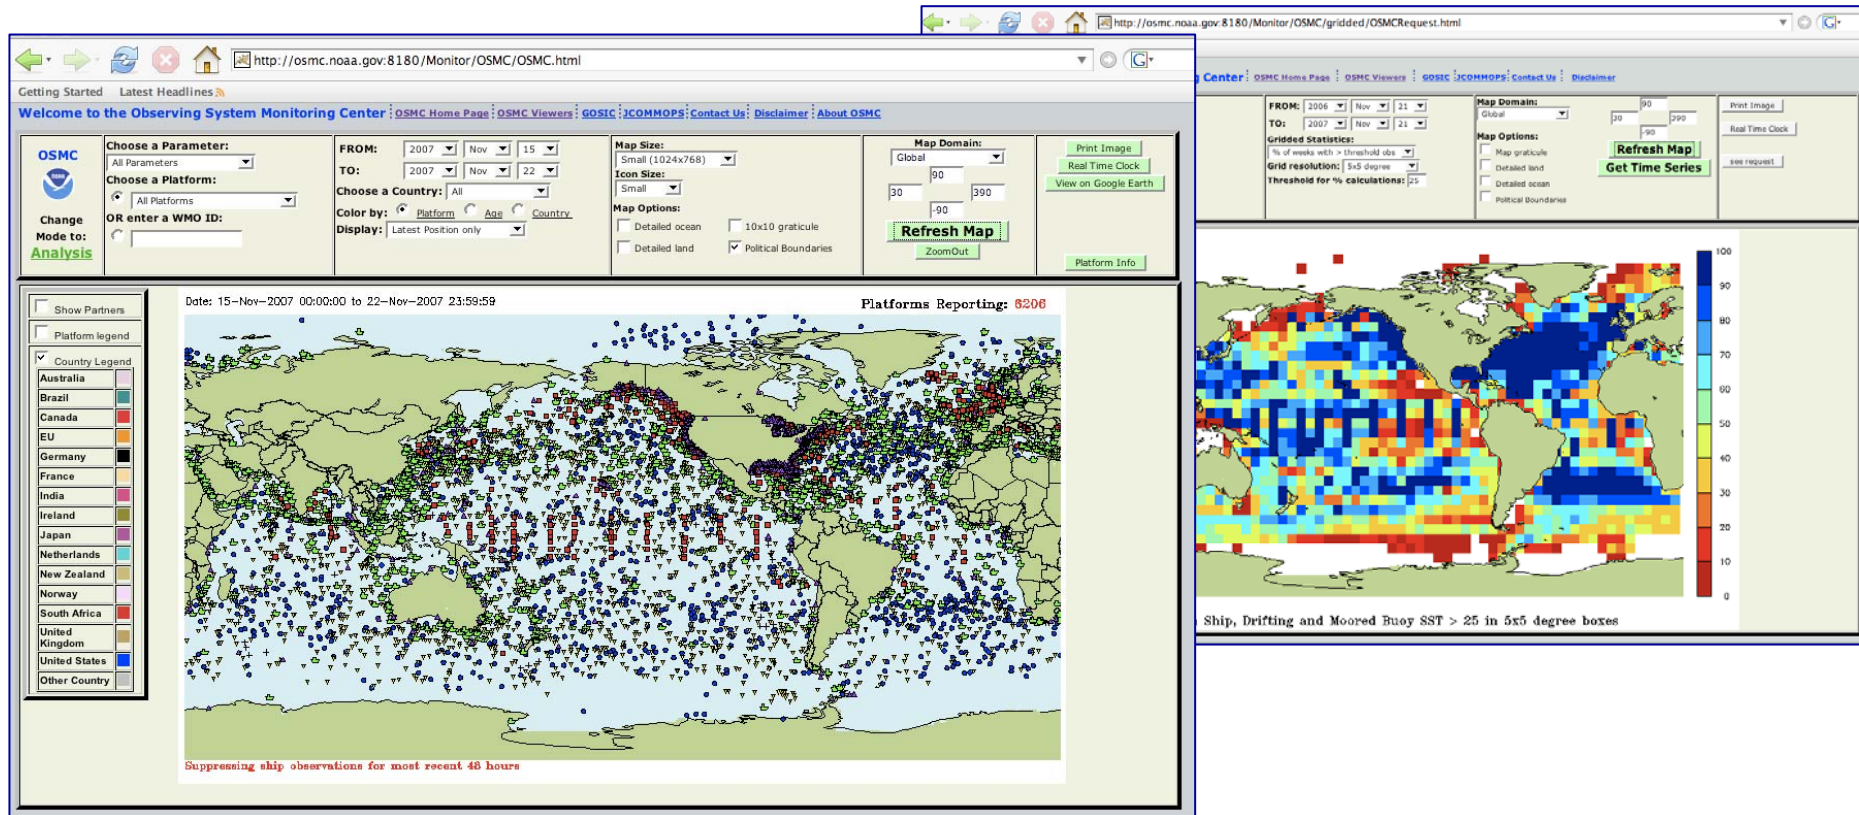

Observing Program Monitoring, Support and Analysis

Real-time system monitoring and analysis

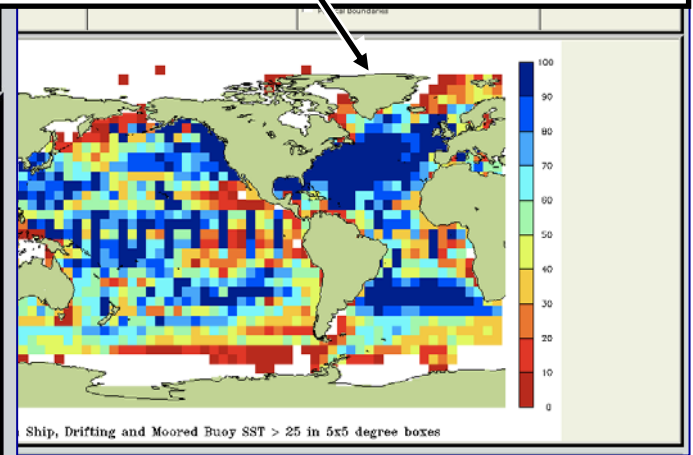

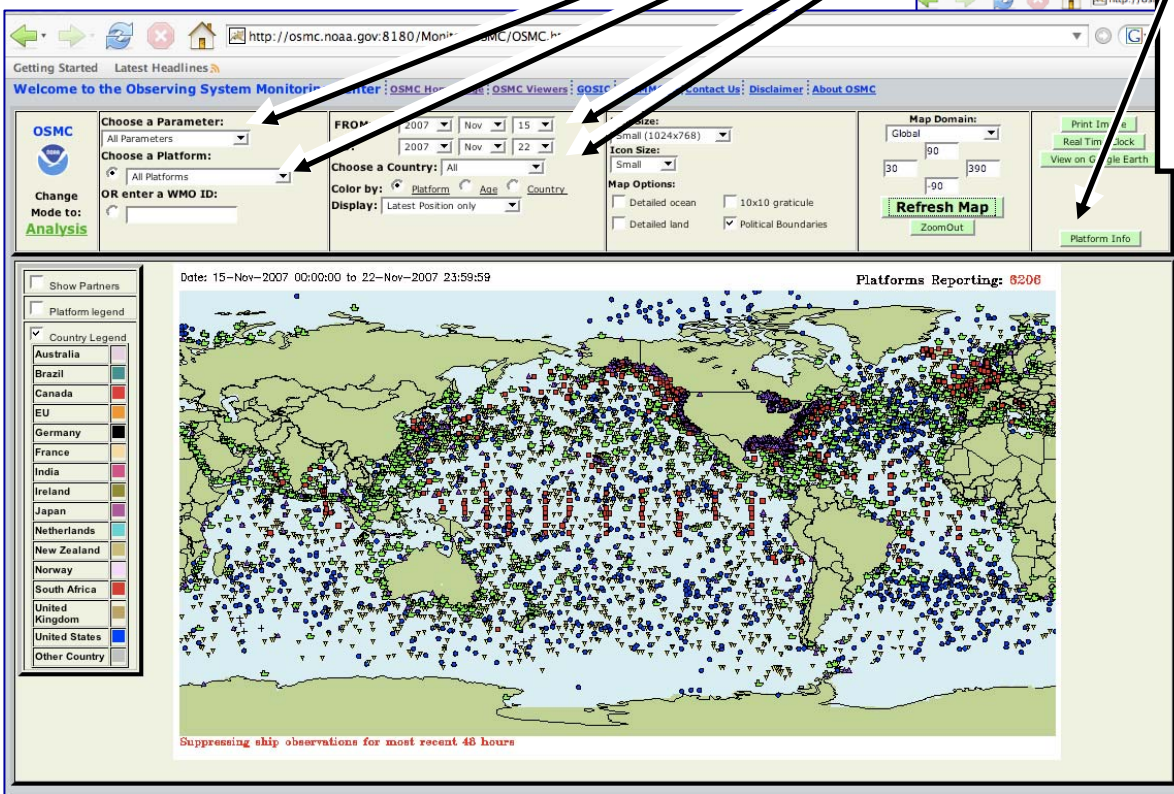

- JCOMMOPS -
- Observing System Monitoring Center (OSMC) -

Observing System Monitoring Center

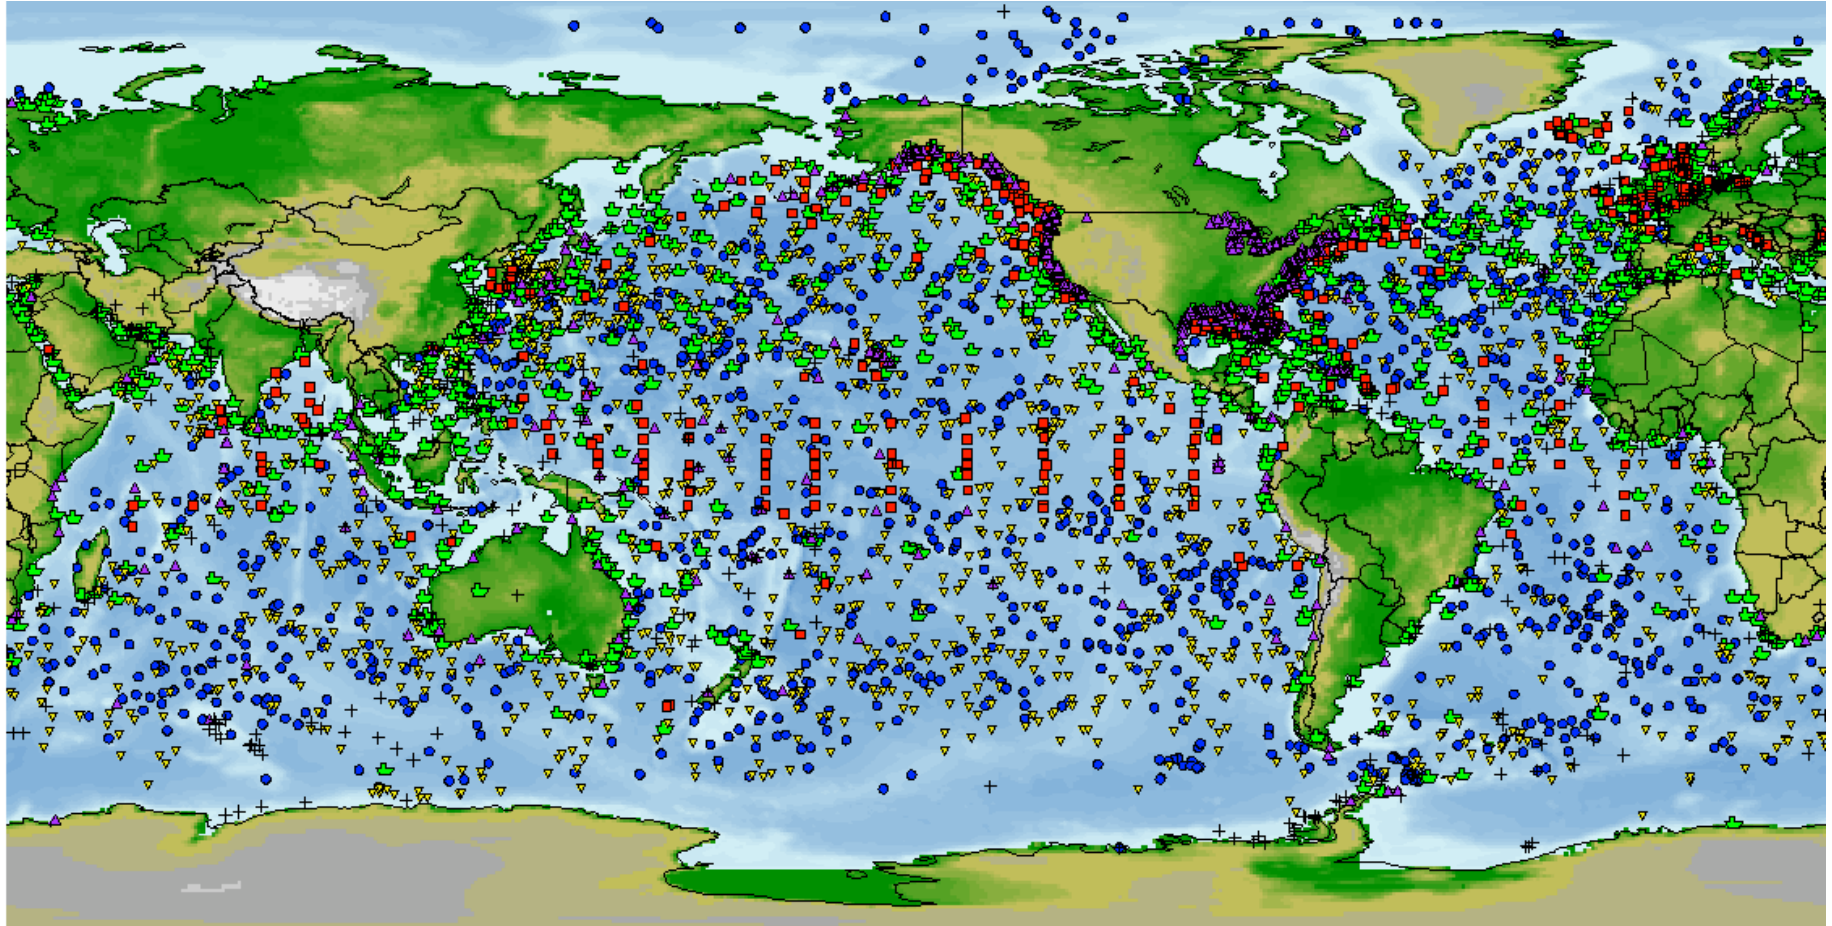

Near-real-time tool for system statistics and data

- > Sort by:
 - Platform type
 - Variables being sampled
 - Time frame
 - Contributing Country
- > Drill down for platform metadata and real-time data.
- > Analysis of sampling effectiveness.

Status of the System

8055 Platforms reporting in February

Suppressing ship observations for most recent 48 hours

Observing System Status: 2008, Q4 Temperature Profiles

Sampling requirements:
1 profile
Every 10 days
In every 3 x 3 °

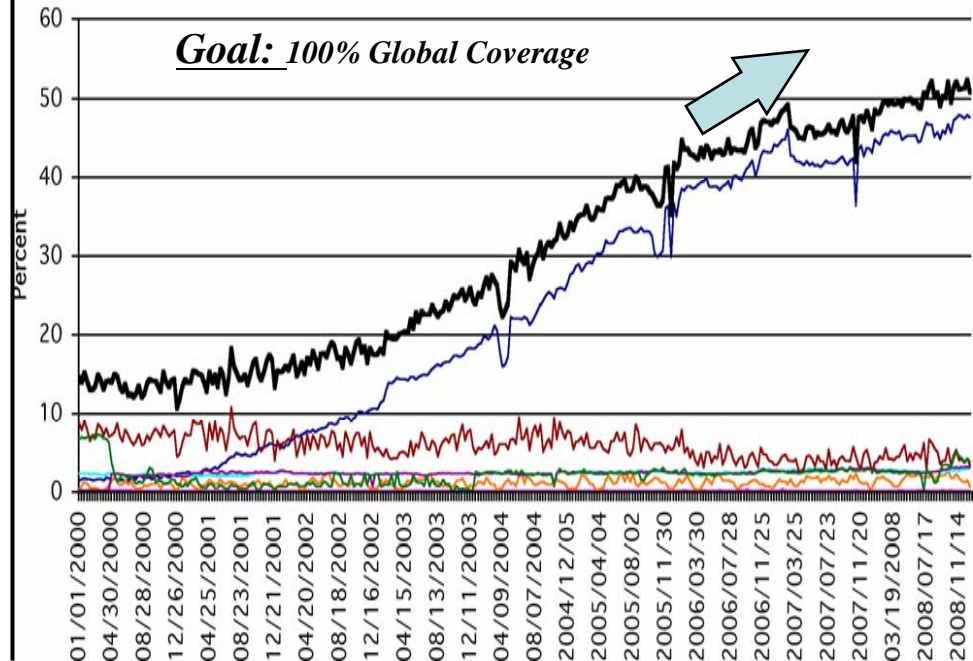

- BATHY (mostly XBTs)
- TRACKOB (surface underway data)
- TESAC (mostly Argo floats)
- BUOY (moored and drifting)

Requirement: All boxes blue

- Argo
- Bottle
- CTD
- Moored
- Sensor Chain
- XBT
- Unknown
- All

Goal: 100% Global Coverage

**Observations Coordination
Group – III**

9-11 March 2009, Paris

OCG – III

- **INTEGRATED SYSTEM - Greater than the sum of our parts**
- **Issues/actions towards a more system perspective**
- Implementation Goals – based on GCOS IP; non-climate requirements
- **Metrics – working towards ECV-based reporting will allow optimization of networks (CWG to make recommendations)**
- Coordination between satellites and *in situ*
- **JCOMM data management and services**
- JCOMMOPS, observing system technical support
- **Fortuitous timing: OceanObs'09**
- Information about the OS to external community – thanks!

OCG charges to SOT (1/2)

- Implementation Goals and Metrics
- Community-based plans for way forward (OceanObs'09 CWPs)
- BUFR templates, Meta-T, Pub 47
- Best practices (JCOMM Catalogue as contribution to WIGOS)
- Cookbook for getting data on the GTS
- JCOMMOPS

OCG charges to SOT (2/2)

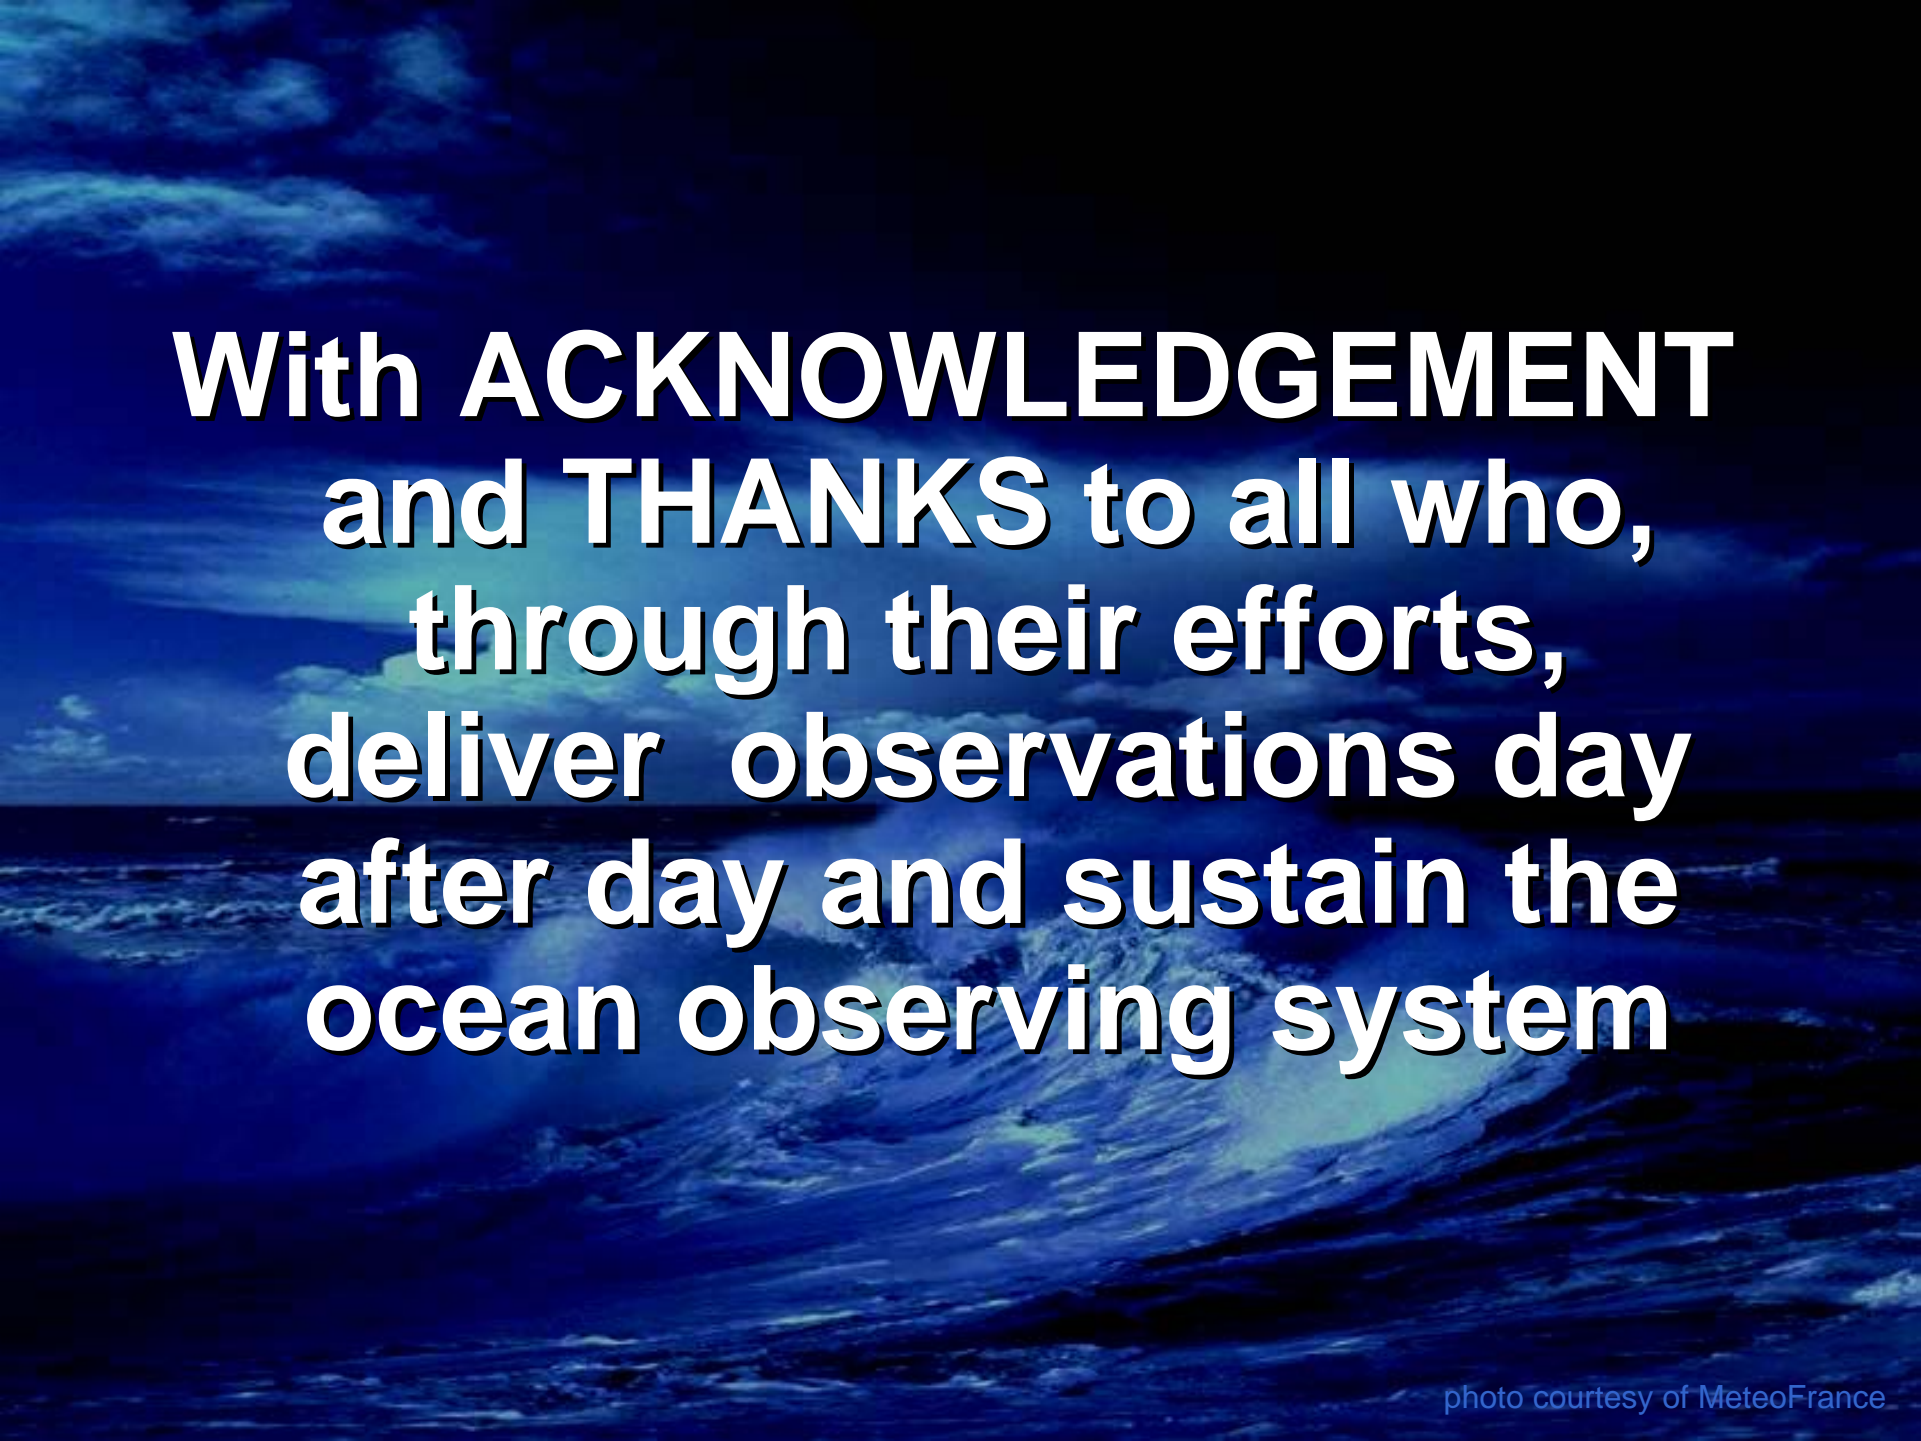

- **VOS**
 - Best practices for homogeneity and accuracy
 - Outreach to make case for climate VOS obs
- **SOOP**
 - Data transmitted near R-T, stricter QC
 - Facilitate deployment opportunities
 - SOT / IOCCP pamphlet for carbon community on PMO network
 - Plan to optimize measurements from SOOP ships
 - Continue working on XBT fall-rate!

International Partnerships are Central

A global system by definition crosses international boundaries.

NOAA's contributions are managed in cooperation with the Joint WMO/IOC Technical Commission for Oceanography and Marine Meteorology (JCOMM) -- presently 72 nations.

**With ACKNOWLEDGEMENT
and THANKS to all who,
through their efforts,
deliver observations day
after day and sustain the
ocean observing system**
