

# **Impact-Based Forecasting and Risk-Based Warnings**

## **Stakeholders Workshop, Maldives**

Reimer de Graaff

6 oktober 2016

# Flood (hydrodynamic) modelling

The modelling of water levels, currents, waves and flooding during severe weather conditions or tsunamis.

... is very powerful as it:

- integrates data from various sources (global models, measurements)
- can give timely forecasts or assess risk maps
- can help to better understand / teach the physics
- can be updated with new models, bathymetric surveys, computer capacity, etc.
- can be extended to include e.g. sediment transport, water quality, spills, etc.
- can be used to assess worst-case or what-if scenarios

... but, as part of impact-based forecasting:

- should be in place before integrated in forecasting
- should be able to give quick and accurate predictions
- should be robust
- should be easy to use / hand-over

# Contents

- Brief Introduction Deltares
- Hydrodynamic modelling software
  - Delft3D / DFLOW-FM
  - SWAN / XBeach
  - Delft-FEWS
- Examples Flood Forecasting systems
  - North Sea
  - Arabian Gulf
  - Singapore
- Options for modelling in the Maldives

# Brief introduction to Deltares

**Deltares** is an independent institute for applied research in the field of water, subsurface and infrastructure.

- applied research & specialist consultancy
- main focus on deltas, coastal regions and river basins
- extensive hydraulic/geotechnical laboratories and computer modeling facilities
- open-source policy: “dare to share”
  
- > 800 academic staff
- main office in Delft, The Netherlands
- branch offices in Singapore, USA, Jakarta, Abu Dhabi, Rio de Janeiro

# Delft3D – hydrodynamic model

- Integrated 2D and 3D modelling of water levels, currents, waves, sediment transport, seabed changes, water quality and ecology
- Areas of application: marginal seas, estuaries, rivers, lakes
- Recti- and curvilinear grids
- Open Source software

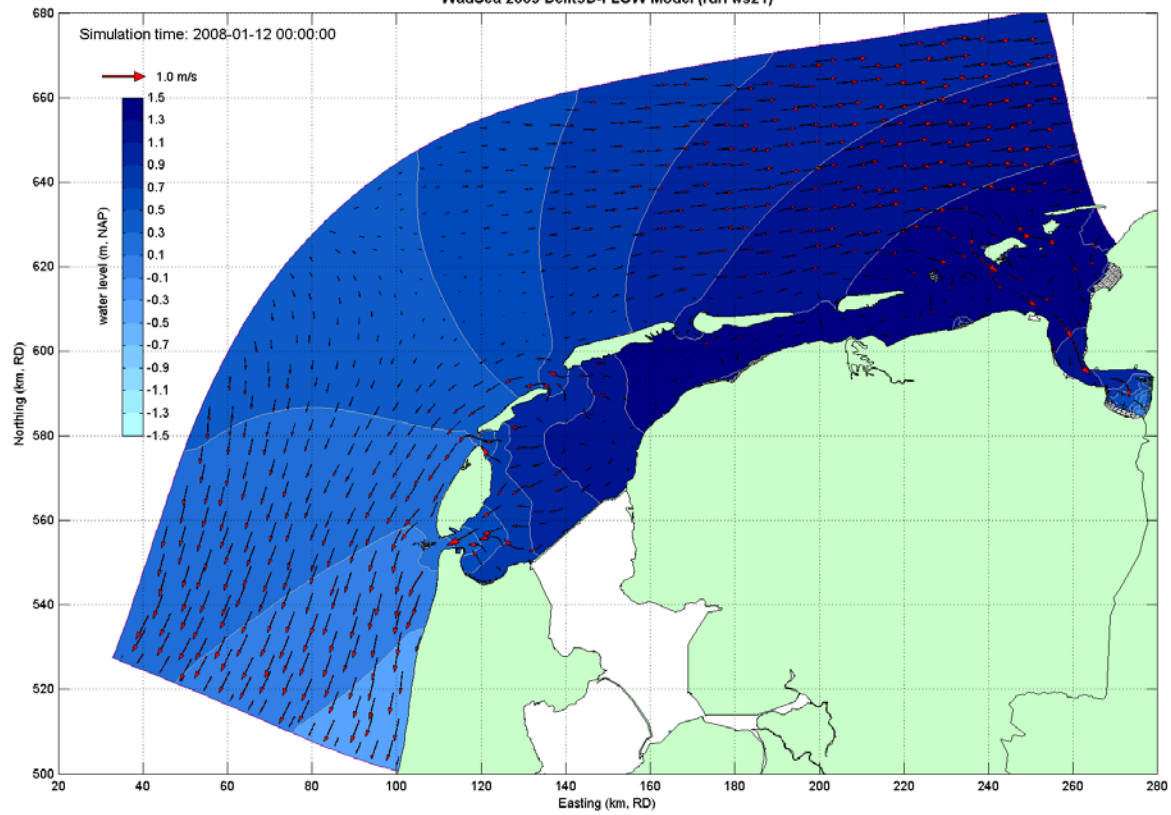

- Tide and wind-driven flow
- Drying and flooding of inter-tidal flats
- Density driven flow due to density gradients of non-uniform temperature and salinity concentration distributions
- Horizontal transport of matter on large and small scales
- Hydrodynamic impact of engineering works such as land reclamation, breakwaters and dikes
- Thermal recirculation of cooling water discharges from a powerplant
- Cyclone modelling

WadSea 2009 Delft3D-FLOW Model (run ws21)

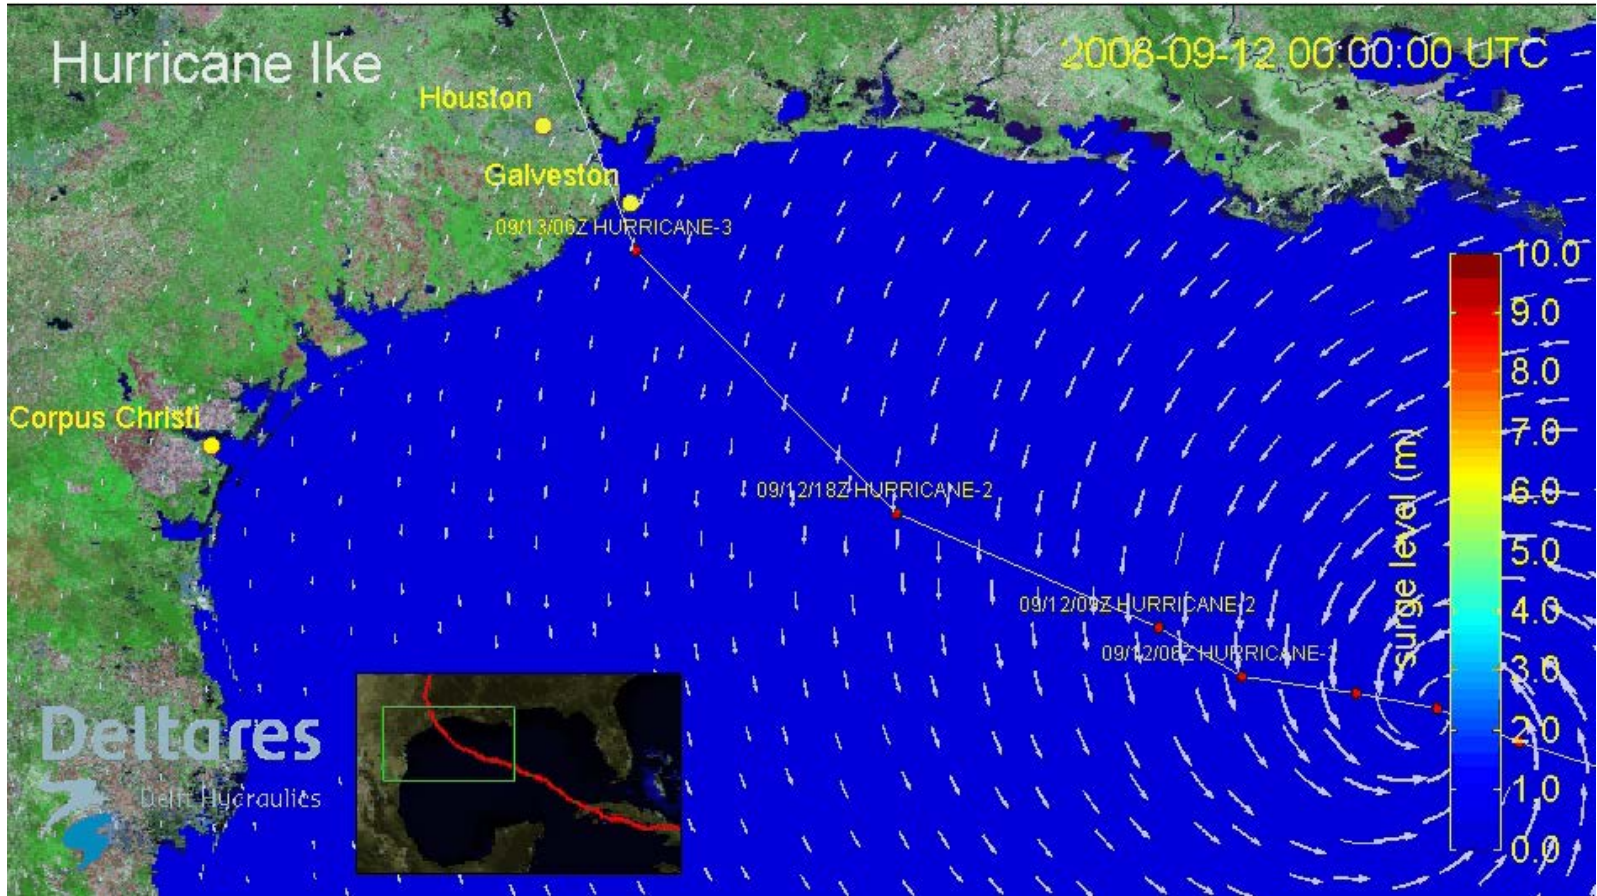

WadSea 2009 Delft3D-FLOW Model (run ws21)

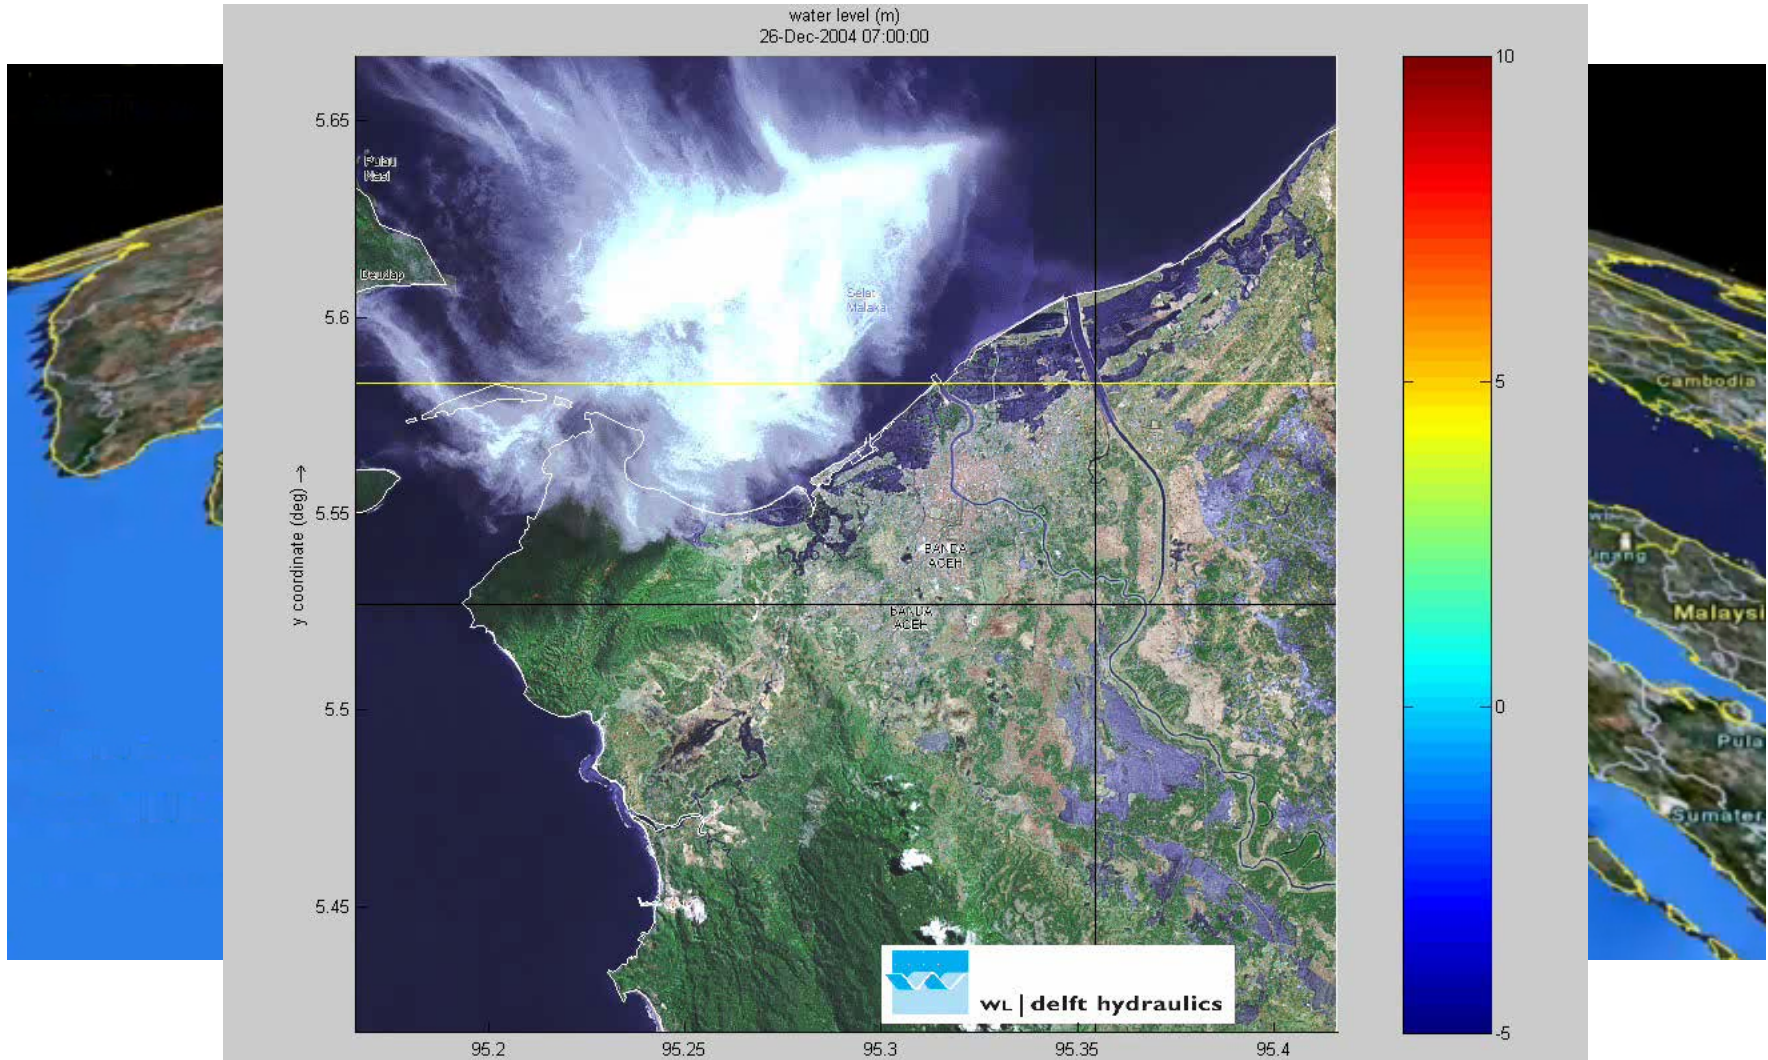

# Cyclone modelling (incl. inundation)

# Cyclone modelling (incl. inundation)

# Tsunami modelling (incl. inundation)

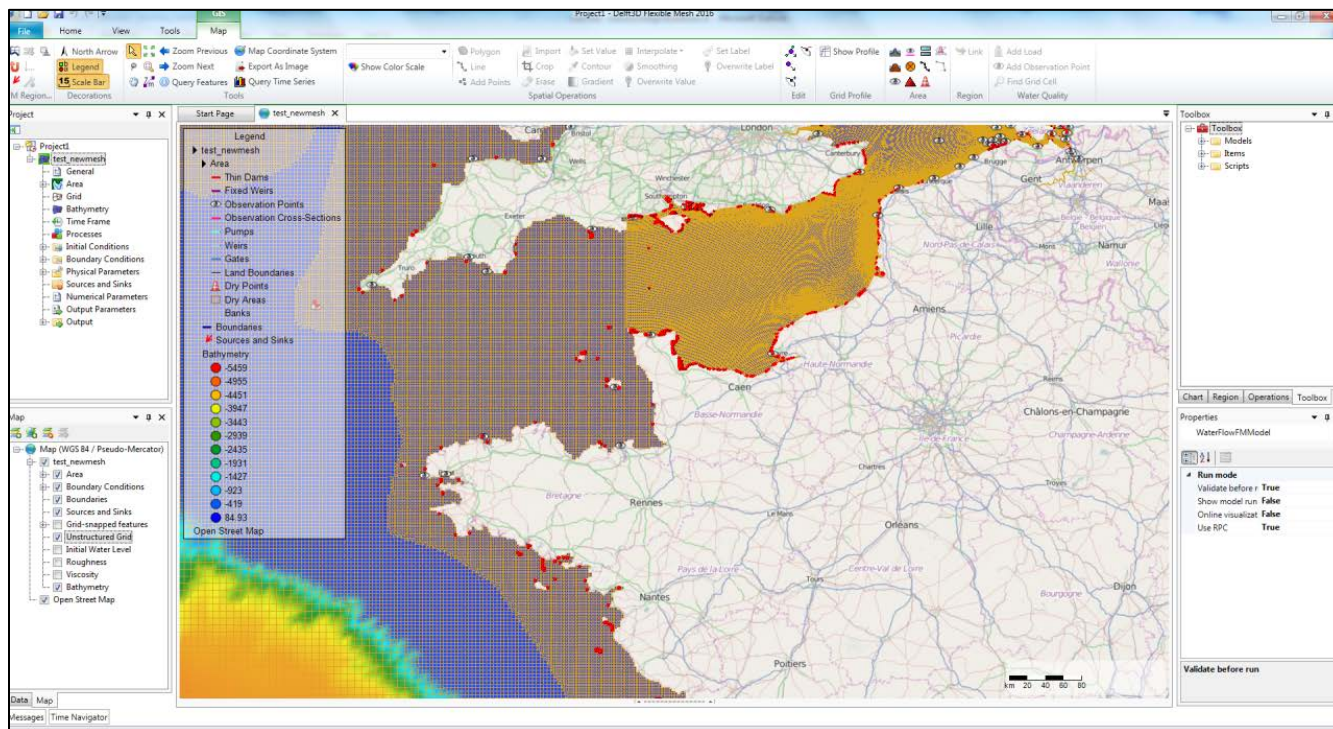

# Tsunami modelling

# Deltares software – Delft3D-Flexible Mesh

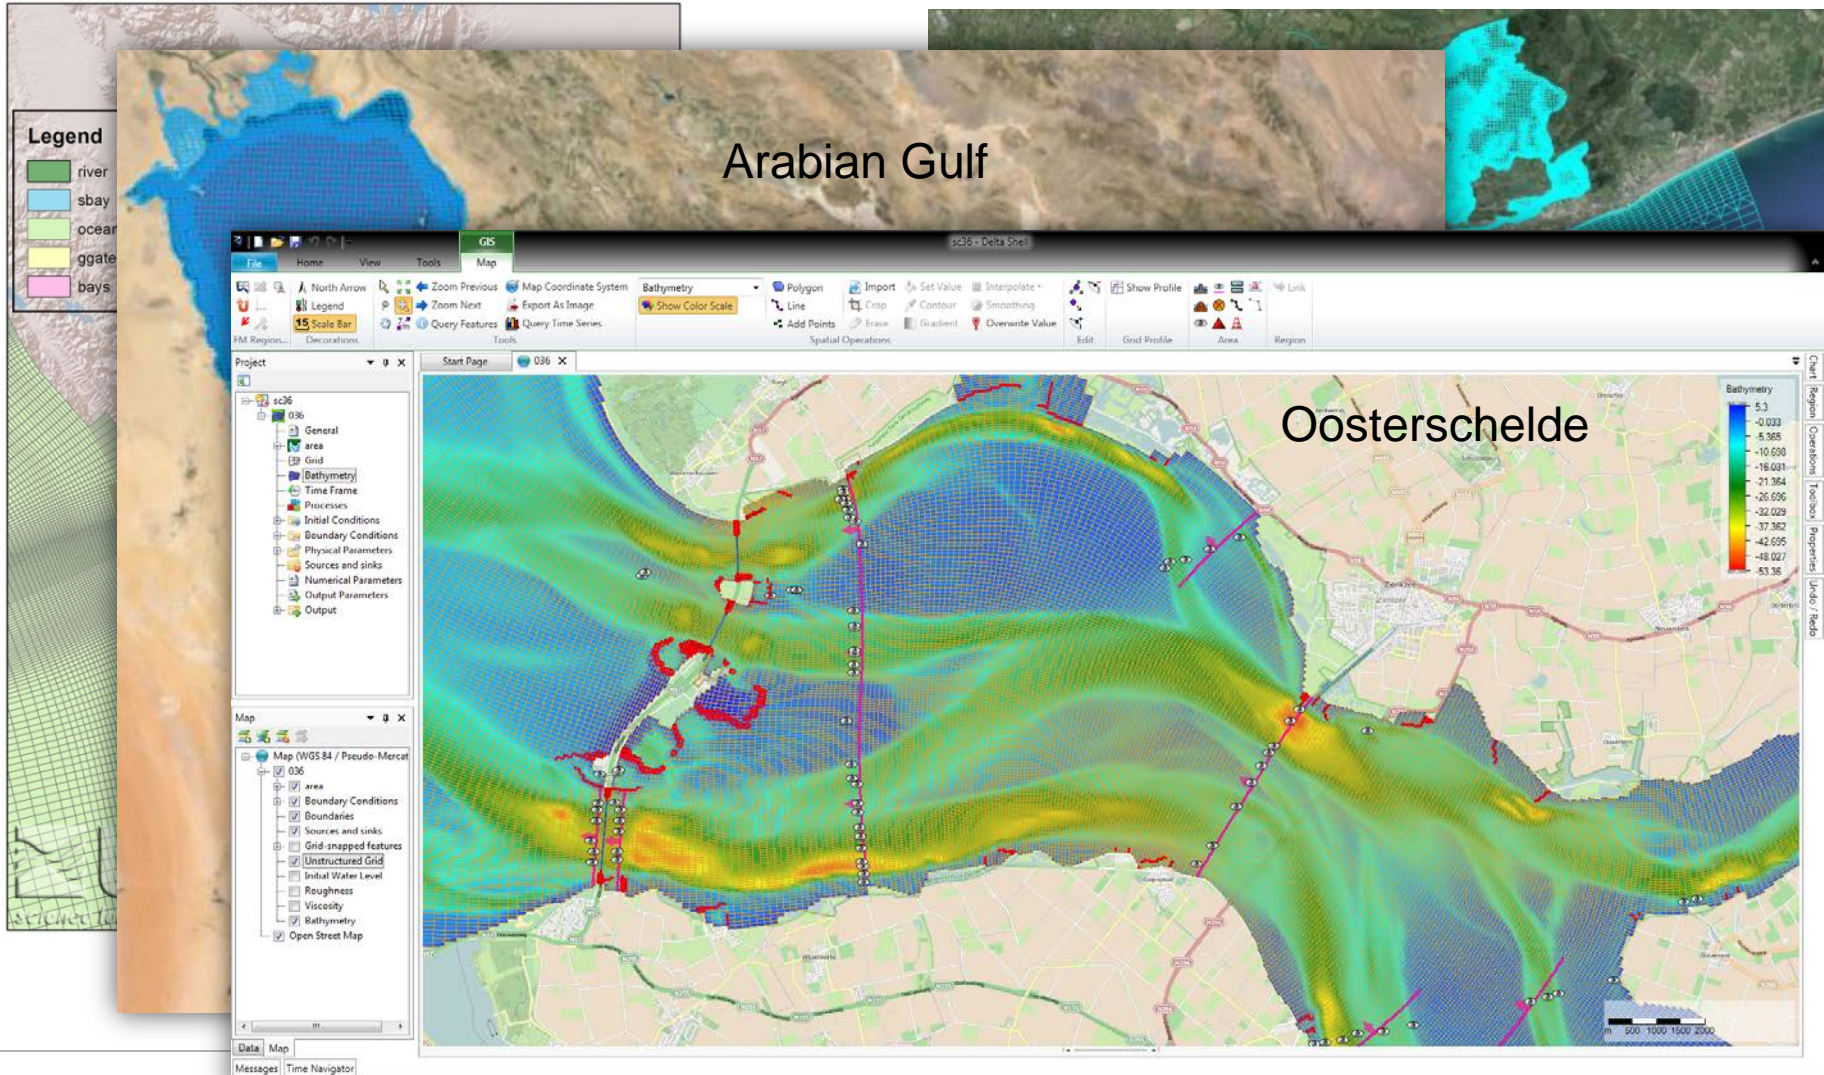

- Delft3D Flexible Mesh (FM) is the new software engine
- successor of Delft3D 4.01, launched in Nov 2015
- for hydrodynamic, sediment transport, morphodynamic, water quality and ecology simulations on unstructured grids in 1D-2D-3D
- optimal modelling flexibility and parallel computing

# FM model examples

San Francisco Bay

Venice Lagoon

# SWAN wave model

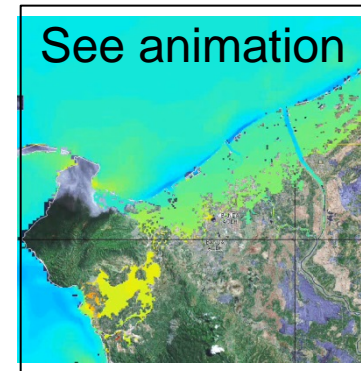

- Shallow-water wave modelling
- SWAN: developed by TU Delft, in cooperation with Deltares
- Wave propagation, wave growth, refraction, breaking, wave-wave interaction, dissipation (e.g. mud, vegetation) wave set-up and wave reflection
- Stationary and non-stationary simulations
- Generation, propagation and dissipation of waves
- Combined sea and swell waves
- Dynamic coupling with Delft3D modules

# XBeach model

- New open-source numerical model
- for wave propagation, long (infragravity) waves and mean flow, sediment transport and morphological changes of the nearshore area, beaches and dunes during storms
- developed by Deltares, UNESCO-IHE, TU Delft and University of Miami
- Very effective model for combined sea + swell wave propagation, and flooding of atoll islands

- open shell system for managing the forecasting process
- handles all data flows, modelling, archiving and dissemination
- interface to external data sources and models
- modular and highly configurable
- runs stand-alone, or in a fully automated distributed client-server environment
- forecasting of hydrodynamics, but also water quality parameters, dredging plumes, spills, etc.
- what-if scenarios
- designed for robustness with advanced back-up/shadow functionalities
- worldwide applications by governments and local/regional institutes (NL, UK, US, AUS, UAE, Brazil, Singapore, etc.)
- active user community with yearly user meetings

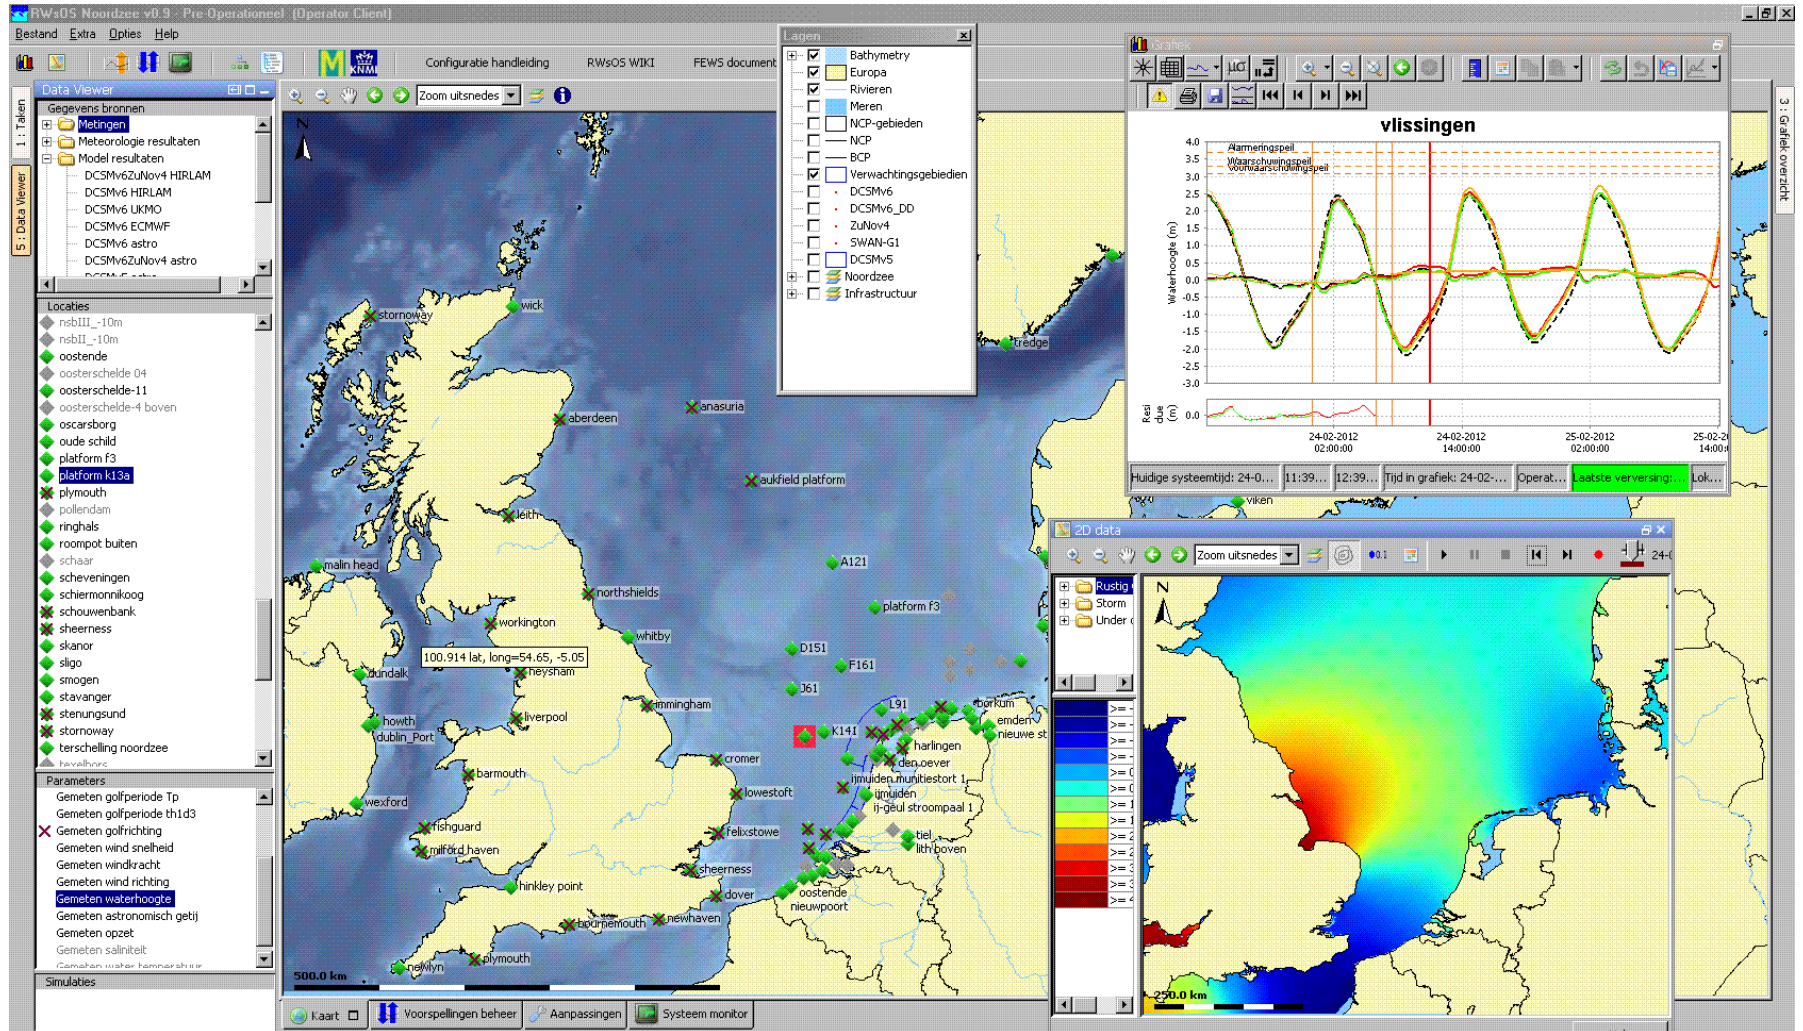

# Deltares software - Delft-FEWS

# Delft-FEWS Forecasting Systems

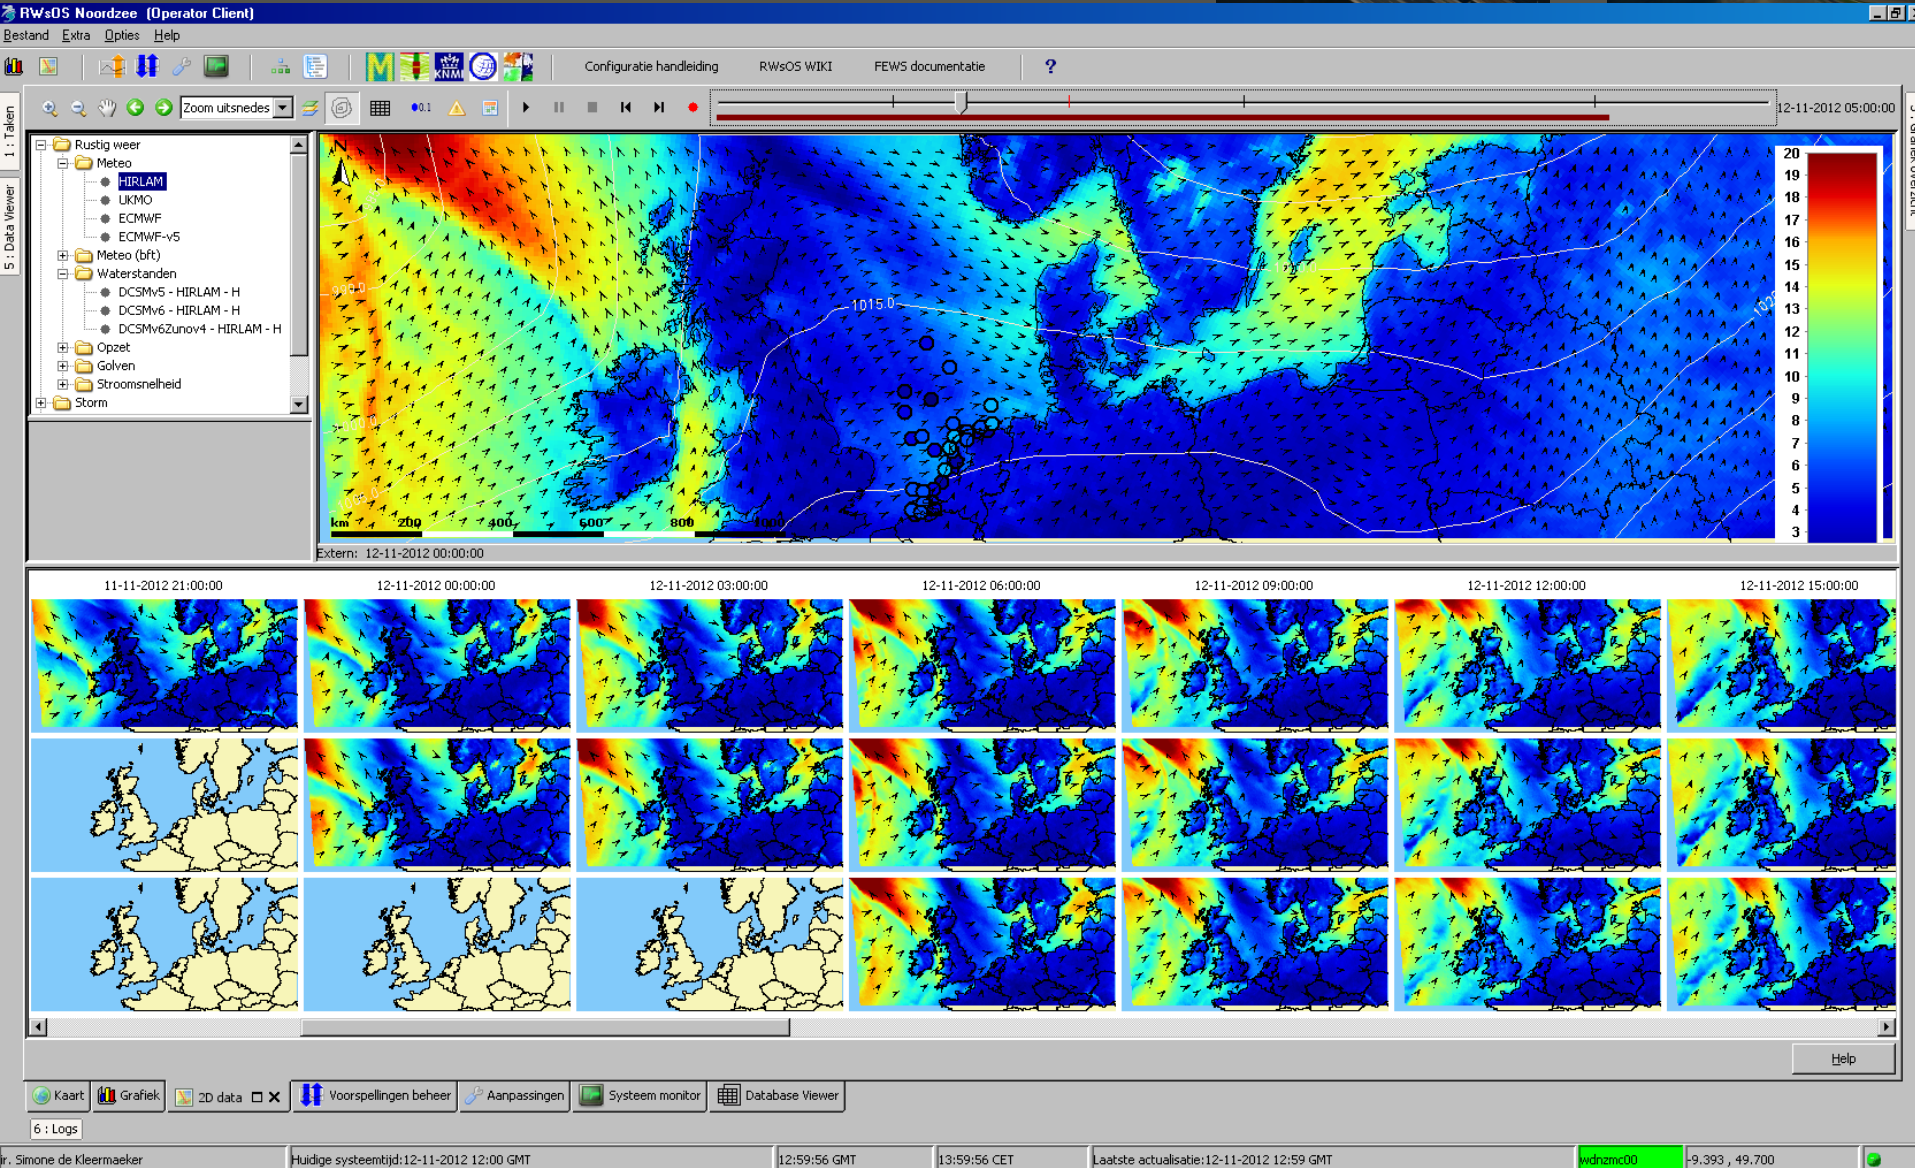

# FEWS North Sea – Flood Forecasting System

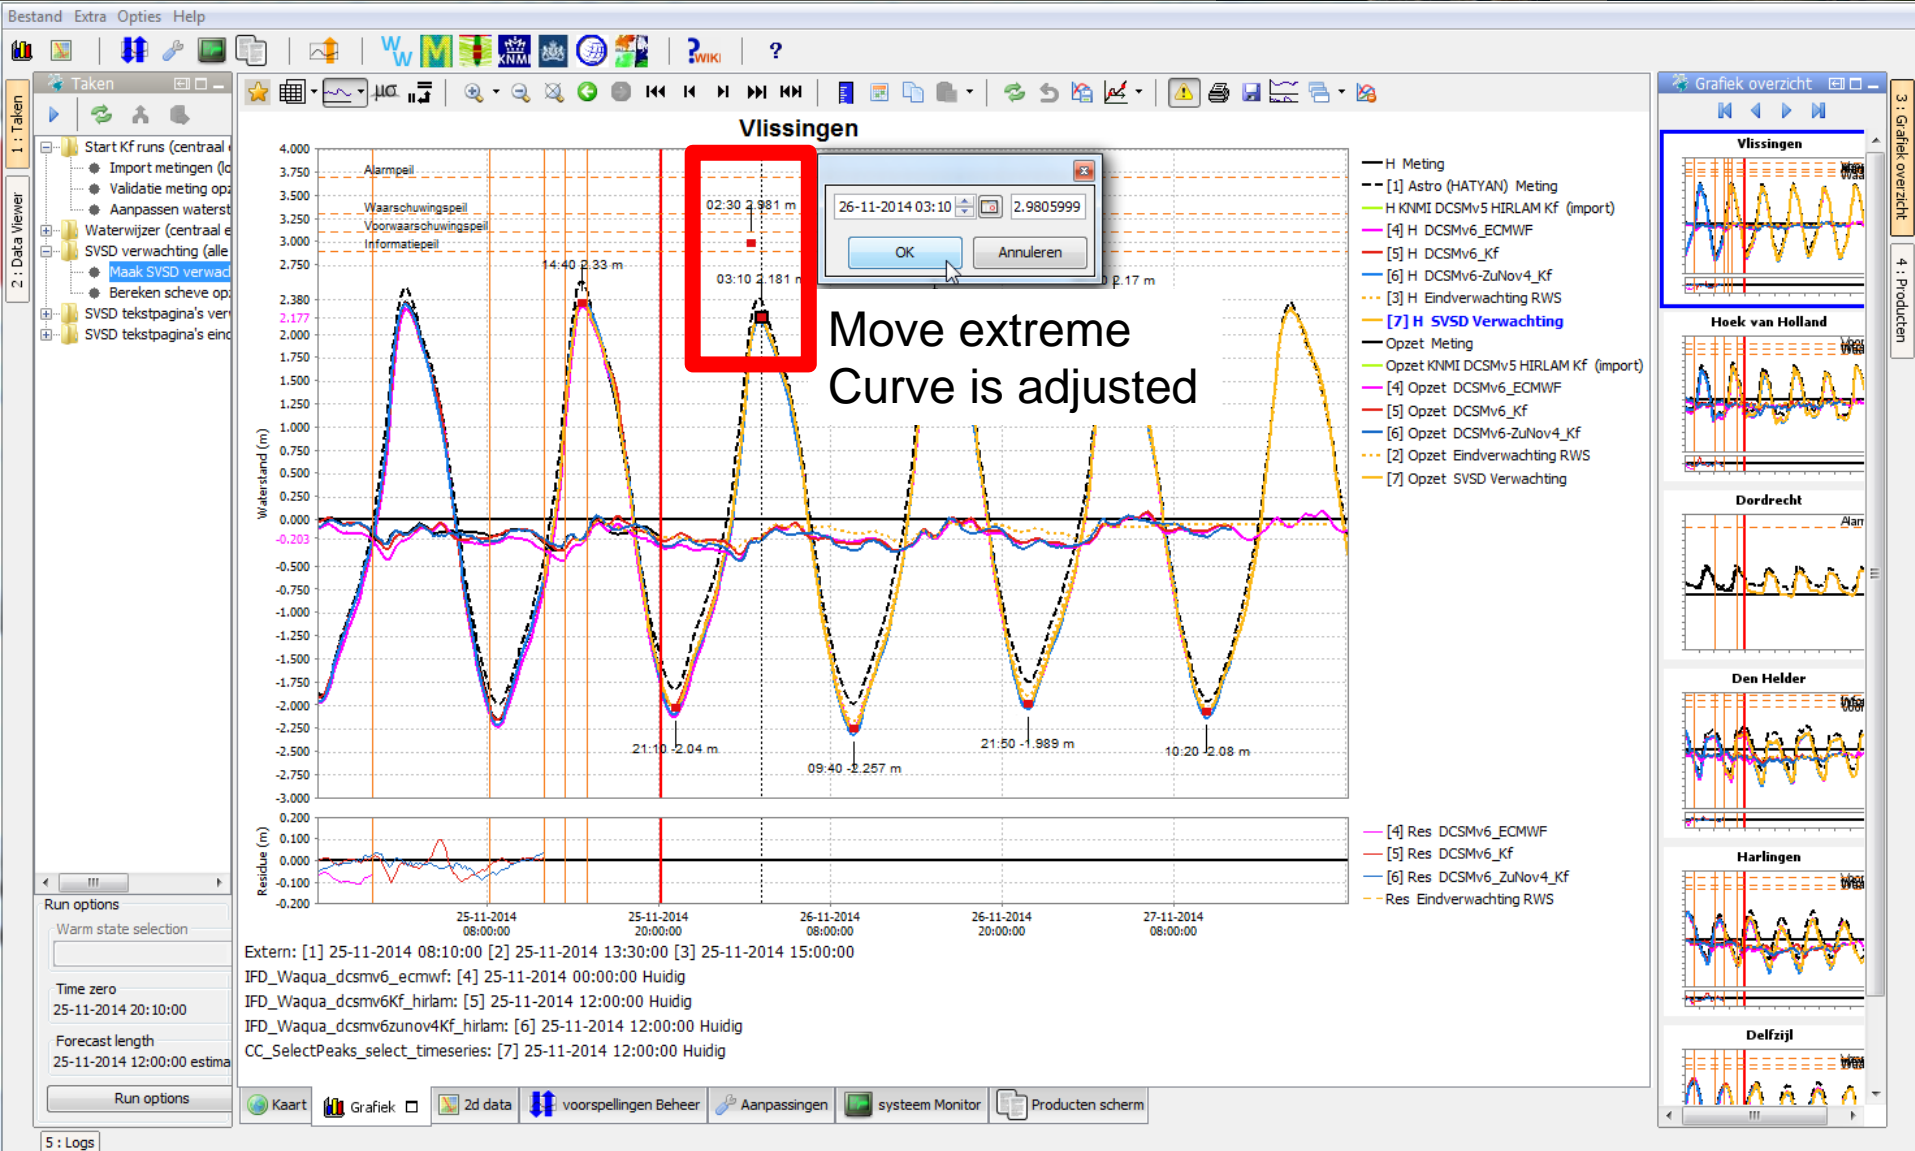

Water-level forecasts at stations along the Dutch coast are provided every 6 h, with a 48-hour lead time. Developed for Rijkswaterstaat.

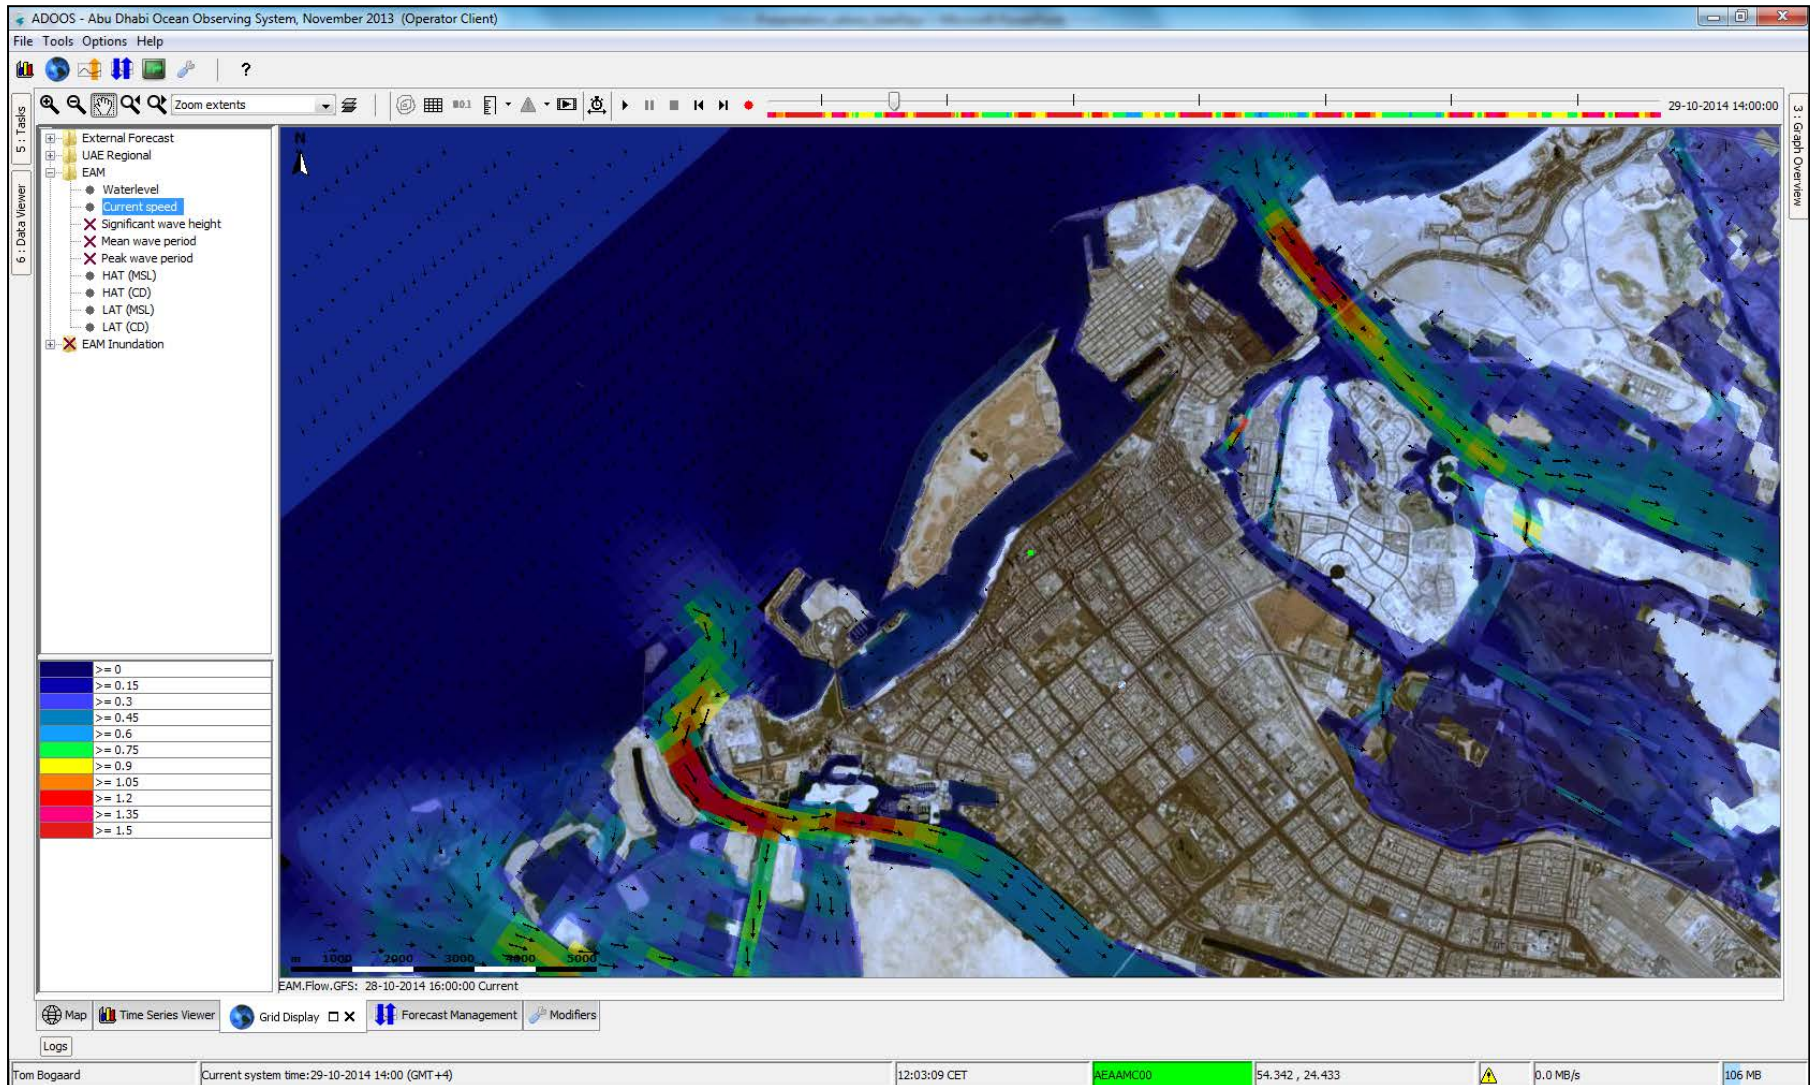

# FEWS North Sea - multiple meteo forecasts

# Fews Horth Sea – Forecast optimisation

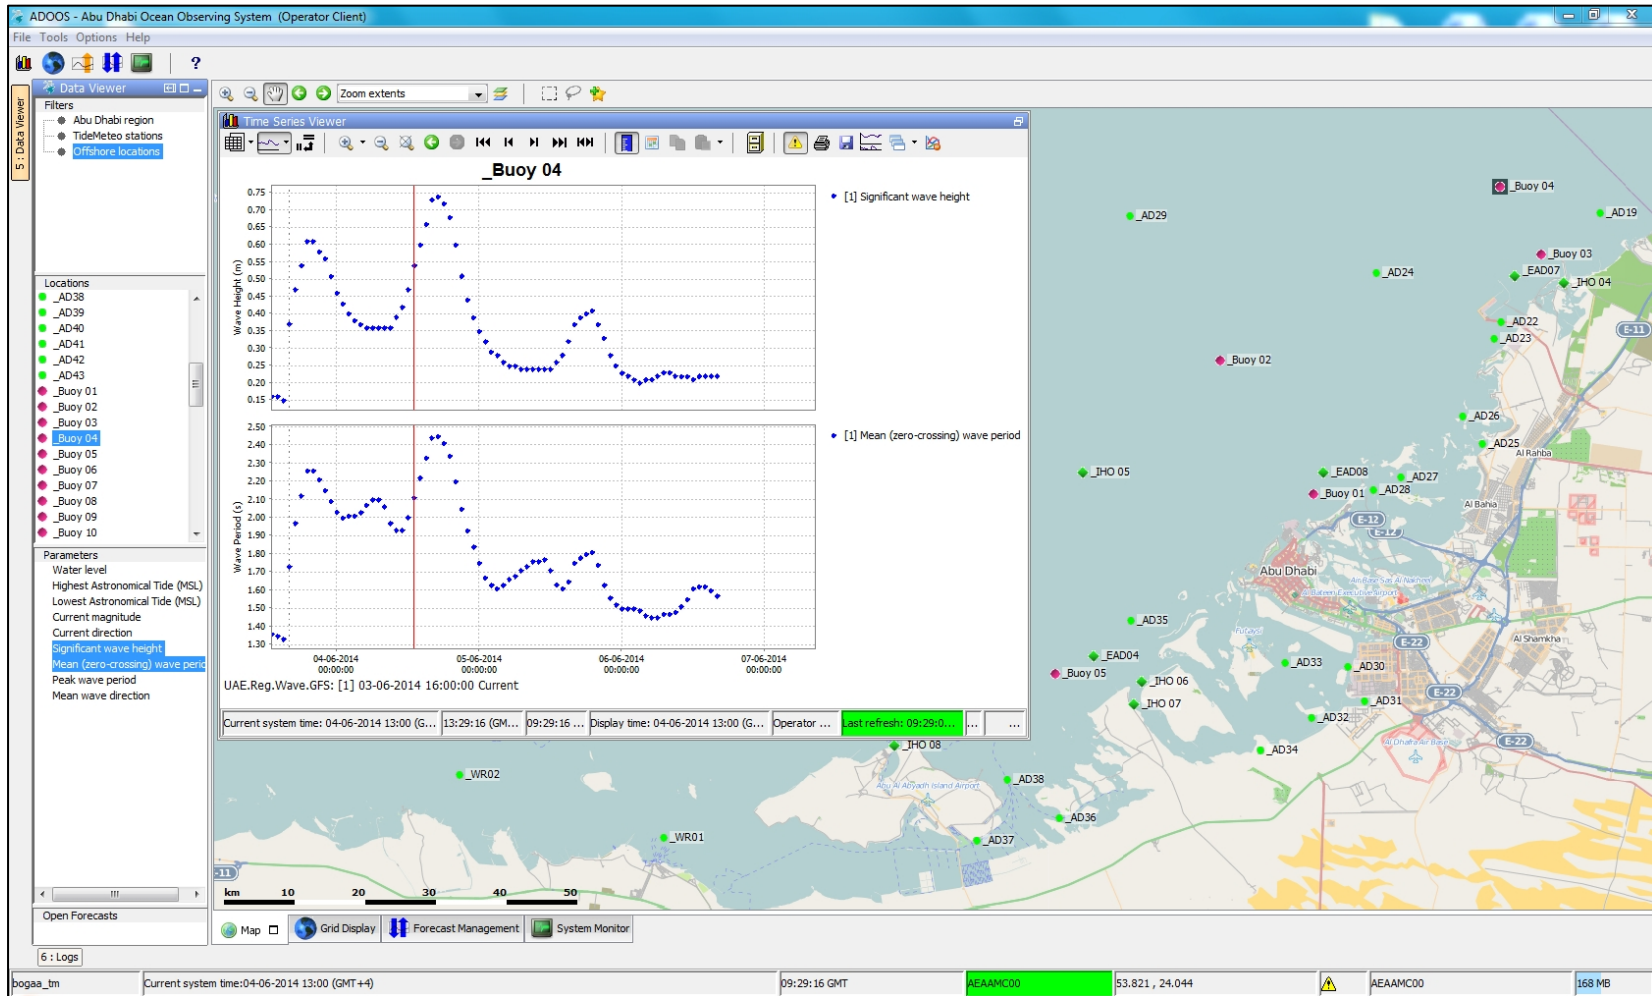

# Abu Dhabi Ocean Observing System

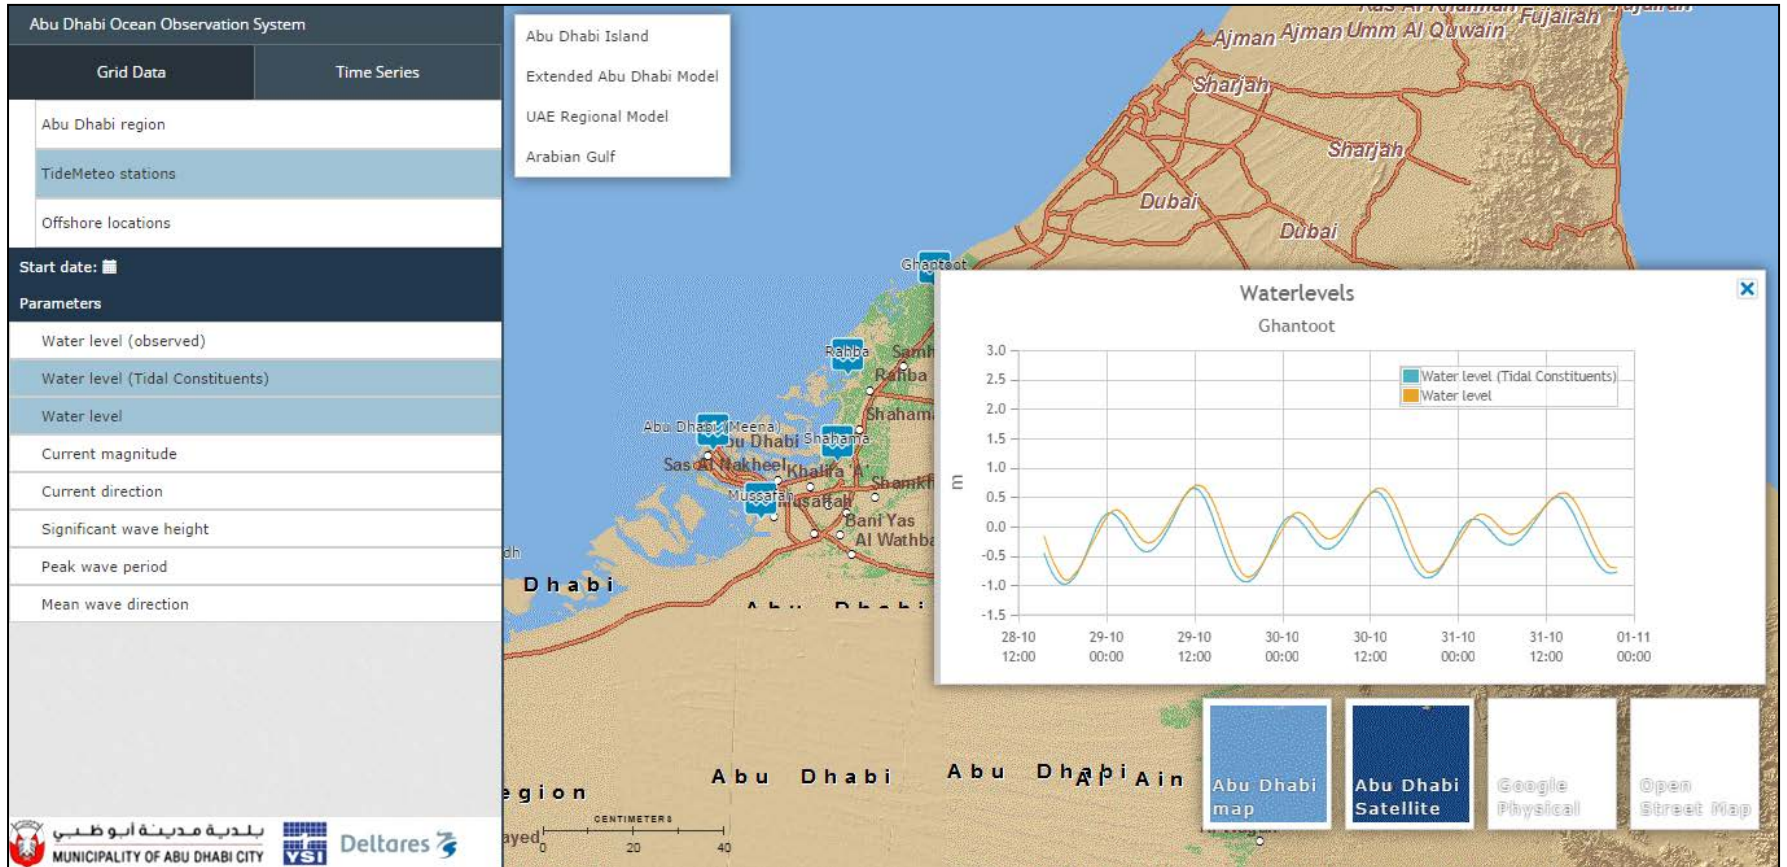

# Abu Dhabi Ocean Observing System

## FEWS Client

# Abu Dhabi Ocean Observing System

## Webviewer

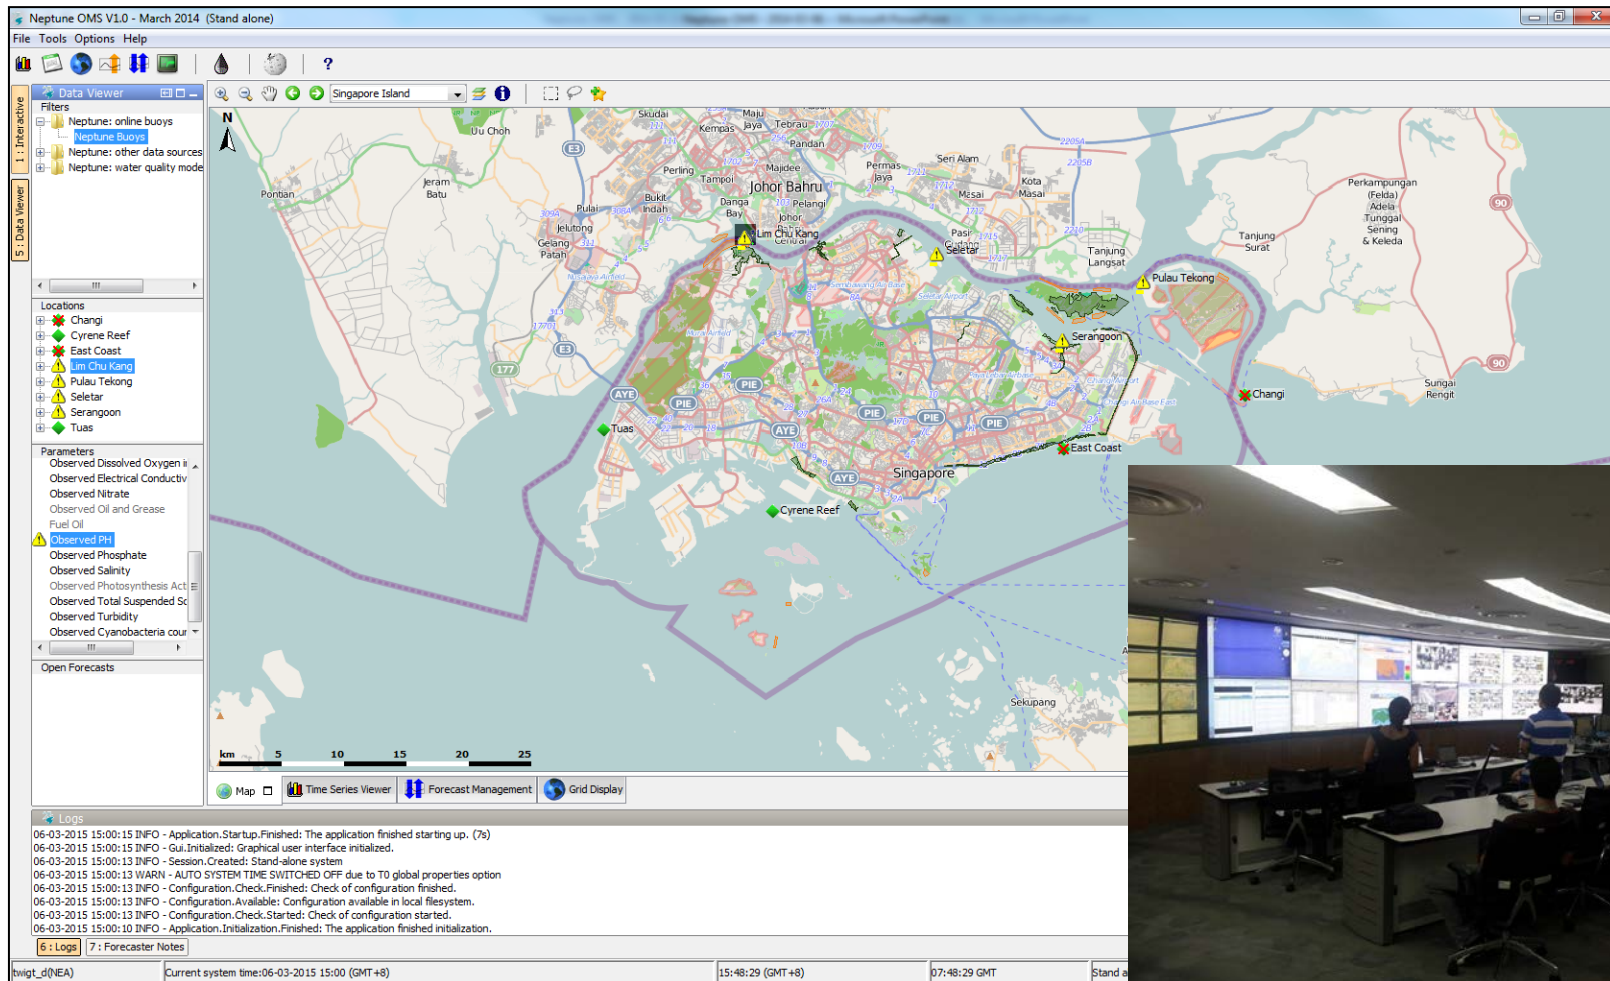

# Singapore – FEWS Water Quality

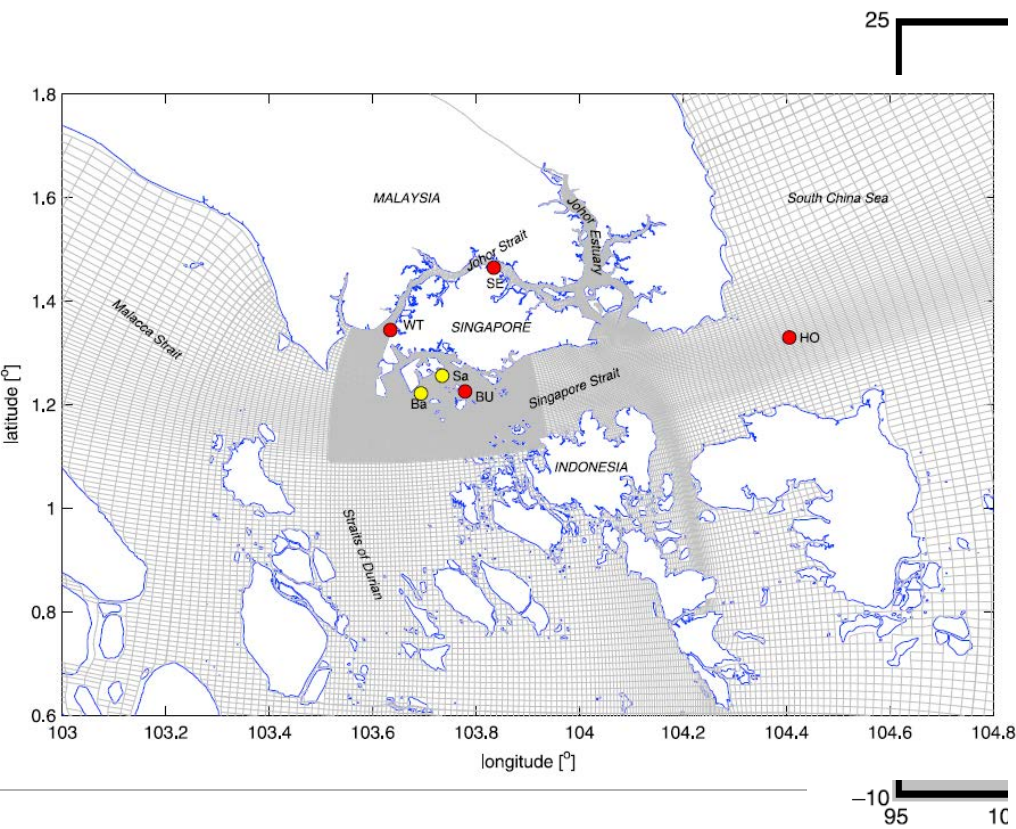

# Singapore – FEWS Water Quality

Runs operationally (24x7) at National University of Singapore (NUS) for daily usage by NEA through a client application.

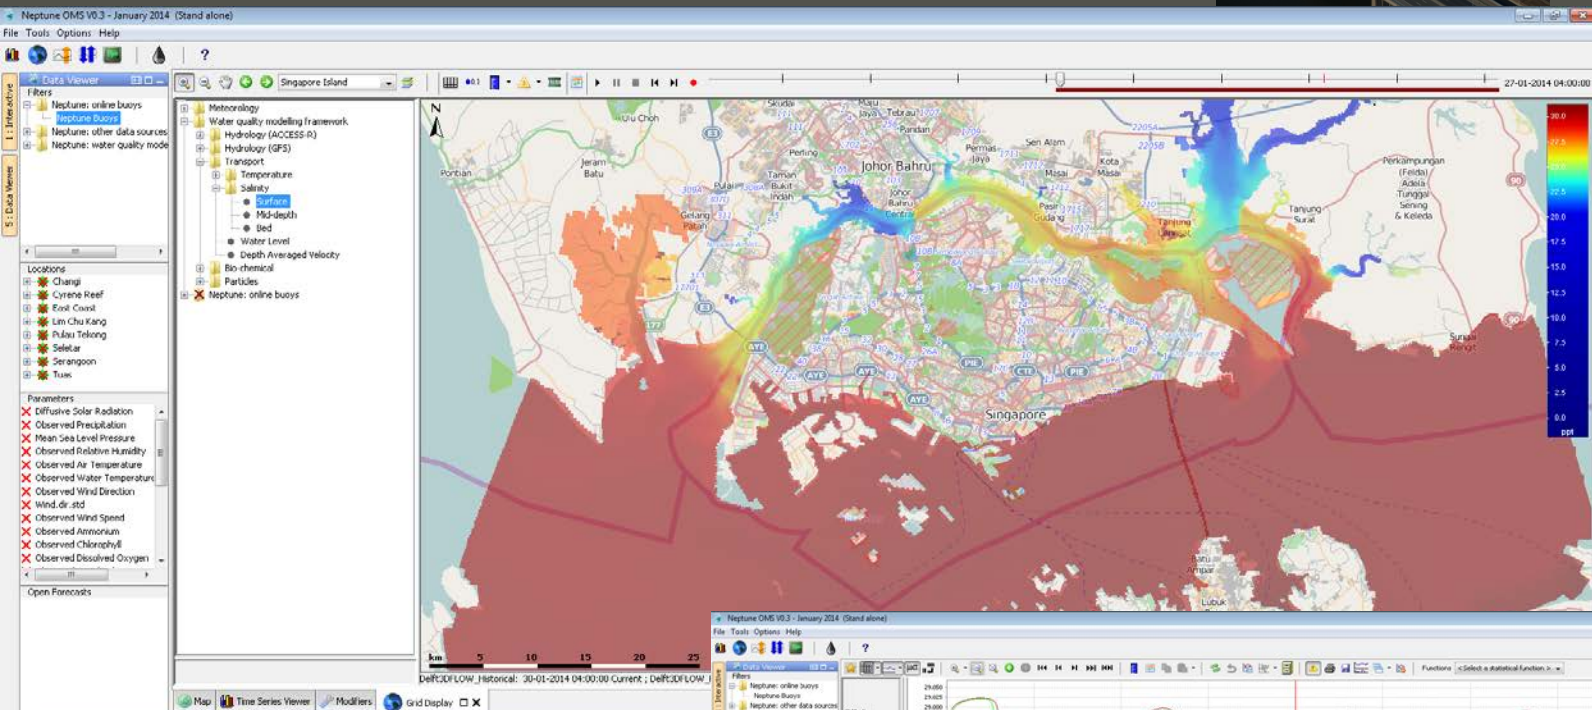

# Hydrodynamics around Singapore

- The Singapore Strait connects the semi-diurnal Malacca Strait with the diurnal South China Sea
- Three domains for better compromise (accuracy, performance)

# Several desired components

**Transport**  
(showing salinity at different vertical levels)

# Options for modelling in the Maldives

## Hydrometeorological conditions

- Tropical climate
- Distinct dry (NE) and wet (SW) monsoon
- Average tide (HAT-LAT range 1.2 m)
- Strong tidal currents ( $\sim 1$  m/s) between atoll islands
- No severe cyclones, tropical storms (North Maldives)

## Tracks and Intensity of All Tropical Storms

Saffir-Simpson Hurricane Intensity Scale

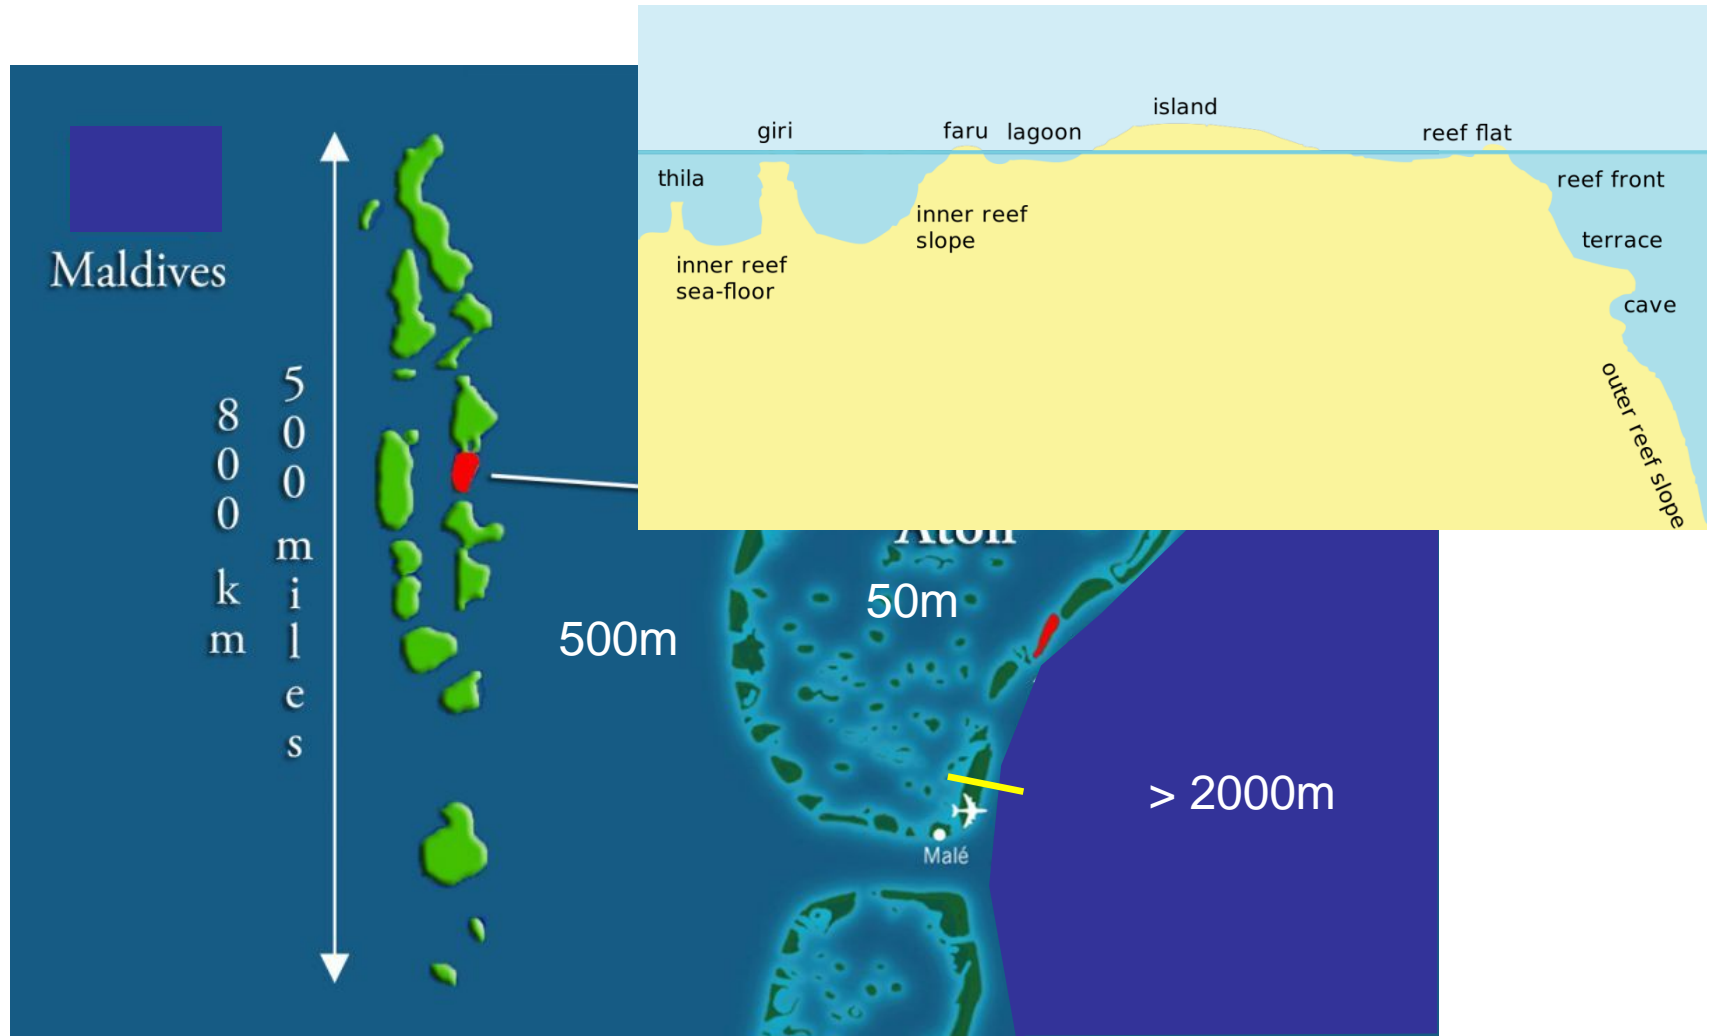

# Options for modelling in the Maldives

## Hydrometeorological conditions

- Tropical climate
- Distinct dry (NE) and wet (SW) monsoon
- Average tide (HAT-LAT range 1.2 m)
- Strong tidal currents ( $\sim 1$  m/s) between atoll islands
- No severe cyclones, tropical storms (North Maldives)
- Persistent swell waves from SW – SE, dissipated by atoll islands
- Mixed with wind-waves (sea), from strong monsoon winds, from tropical storms or during thunderstorms
- Limited storm surge (surrounded by deep water)
- Tsunami: mostly vertical (due to steep shelf slope)

# Options for modelling in the Maldives

# Options for modelling in the Maldives

## Hydrometeorological conditions

- Tropical climate
- Distinct dry (NE) and wet (SW) monsoon
- Average tide (HAT-LAT range 1.2 m)
- Strong tidal currents ( $\sim 1$  m/s) between atoll islands
- No severe cyclones, tropical storms (North Maldives)
- Persistent swell waves from SW – SE, dissipated by atoll islands
- Mixed with wind-waves (sea), from strong monsoon winds, from tropical storms or during thunderstorms
- Limited storm surge (surrounded by deep water)
- Tsunami: mostly vertical (due to steep shelf slope)
- El Nino effects
- Climate change:
  - sea level rise (25 cm in 50 years? 1m in 100 years?)
  - changing weather patterns??

# Options for modelling in the Maldives

- **Tide:** water level predictions and tidal currents (also for operational use)
- **Waves:**
  - swell wave propagation and coastal flooding
  - generation, propagation and overtopping of wind-waves (e.g. during monsoon or tropical storms/cyclones)
- Wave and inundation modelling from rainfall during thunderstorms (squalls)
- Tsunami propagation and inundation modelling (look-up database linked with published seismic warnings)
