LSA-SAF evapotranspiration products and on-going research at RMI

by
Françoise Meulenberghs

in collaboration with Alirio Arboleda, Nicolas Ghilain and Miguel Barrios

Royal Meteorological Institute (RMI)
Belgium

- Introduction: what is LSA-SAF ?

- ET methodology and current operational products

- On-going research activities (2012-2017)

- Plans for the next period (2017-2022)

- Conclusions

- ## EUMETSAT Satellite Application Facilities (SAFs) network
  - The Satellite Application Facilities (SAFs) are a distributed network of thematic application facilities responsible for necessary research, development, and operational activities not carried out by the central facility. The SAFs are located within the National Meteorological Services (NMS) of EUMETSAT Member States, or other agreed entities linked to a user community.

- ## Land Surface Analysis (LSA) SAF

- ## LSA-SAF project team

  Cooperating entities during CDOP-2 (2012-2017):

  - **Instituto Português do Mar e da Atmosfera, IP (IPMA)**, Portugal

  - Météo-France (MF), France

  - **Royal Meteorological Institute (RMIB), Belgium**

  - Karlsruhe Institute of Technology (KIT), Germany

  - Fundacao da Faculdade de Ciencias da Universidade de Lisboa, FP, Instituto Dom Luiz (IDL), Portugal

  - King's College London (KCL), United Kingdom

  - University of Valencia (UV), Spain
  - VITO, Belgium

  In the future:

  - Slovenian Environment Agency (ARSO), Slovenia

  - National Institute of Meteorology and Hydrology (NIMH), Bulgaria

- ## LSA-SAF (http://landsaf.meteo.pt/)

  <u>Objectives</u>

  - to be a leading centre for r**etrieval of information on land surfaces from remote sensing data**, with emphasis on EUMETSAT satellites (MSG, Metop).
  - To provides **near-real-time** and **offline products** and user support for a wide range of **land surface variables** related with:
    - surface radiation, both long- and short-wave components;
    - vegetation, including state, stress and wild fires;
    - energy budget at the surface and mass exchange, combining information on the radiation budget and vegetation state.

  <u>SAF user community</u>

  - The design of LSA SAF products was initially driven by the needs of the **meteorological,** particularly NWP, community. There is, however, a growing number of other important areas, including **agricultural** and **forestry** applications, **land use**, and the broader topics of **climate** and **environment monitoring**.

- **Royal Meteorological Institute (RMI) of Belgium contribution to LSA-SAF**

 - Development of **evapotranspiration** (operational)

But also:

- Development of latent and sensible heat fluxes
- Collaboration with other LSA-SAF teams (development of LST all-weather, GPP)
- Collaboration with other SAFs (H-SAF and CM-SAF)

- ## Physics: water and energy budget

- ## Methodology

MSG SEVIRI pixel

Tiles:

Bare soil

Forest

Crops

Grassland

…

For each tile i of image k

$$LE_i = \frac{L_v \rho_a}{\left(r_{a_i} + r_{c_i}\right)}\left[q_{sat}\left(T_{sk,i}\right) - q_a\left(T_a\right)\right]$$

$$H_i = \frac{\rho_a}{r_{a_i}}\left[c_p\left(T_{sk,i} - T_a\right) - gz_a\right]$$

$$G_i = \beta_i\, Rn_i \qquad \beta_i = f\left(LAI_i\right)$$

$$Rn_i - H_i - LE_i - G_i = 0$$

$$Rn_i = (1-\alpha)S_\downarrow + \varepsilon\left(L_\downarrow - \sigma T_{sk,i}^4\right)$$

Parameterizations adapted from ECMWF TESSEL model (van den Hurk et al, 2000; Ghilain et al, 2011)

Link between LE and ET:

$LE = L_v\, ET$

LE: latent heat flux [W m^{-2}]

ET: evapotranspiration [kg m^{-2} s^{-1}]

L_v : latent heat of vaporisation

$L_v \sim 2{,}5\; 10^6$ J kg^{-1}

For each pixel of image k

$$LE_k = \sum_i \zeta_i LE_i$$

Evapotranspiration [mm h^{-1}]

$$ET_k = 3600\, LE_k\, /L_v$$

MET product

**For each pixel of day d**

Evapotranspiration [mm d^{-1}]

$$ET_d = \Sigma\, ET_k$$

DMET product

Two images are generated: the first one contains instantaneous ET estimates in mm/h while the second one is the quality flag image, provides information on the quality of estimates pixel by pixel

ET (mm/h) for 2010/10/29 at 12:00 UTC

Associated quality flag (-)

- Evapotranspiration (ET): example of products

MET (mm h^{-1}): available each 30 min Example: 28th April 2010 (different hours (UTC) from left to right).

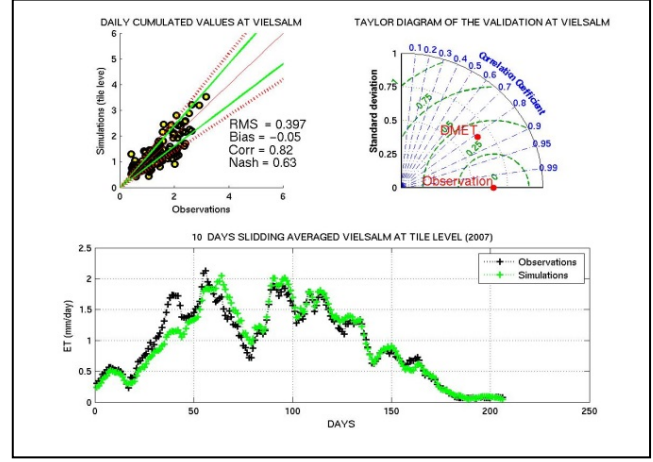

06:00   09:00   12:00   15:00   18:00

DMET (mm d^{-1}): available daily Example: 8th to 12th September 2011 (from left to right).

8/9/2011   9/9/2011   10/9/2011   11/9/2011   12/9/2011

- **Scientific validation and operational quality monitoring**

  Vielsalm (BE) - mixed forest

  - Update scientific validation → Validation Report

  - Quality monitoring (each 6 months)
    → Quality Monitoring Report

- ## Publications and conferences
  - E.g.: Ghilain, N., Arboleda, A., Trigo, I.F., Batelaan, O.and Gellens-Meulenberghs, F., 2015b: Tracking down soil moisture from MSG SEVIRI: fullfilling the promises of geostationnary satellites, Remote Sens. Environ., in review.
  - E.g. 2015: EUMETSAT user conference, Toulouse (FR); GEWEX/ESA workshop on EO of the water cycle, Frascati (IT).
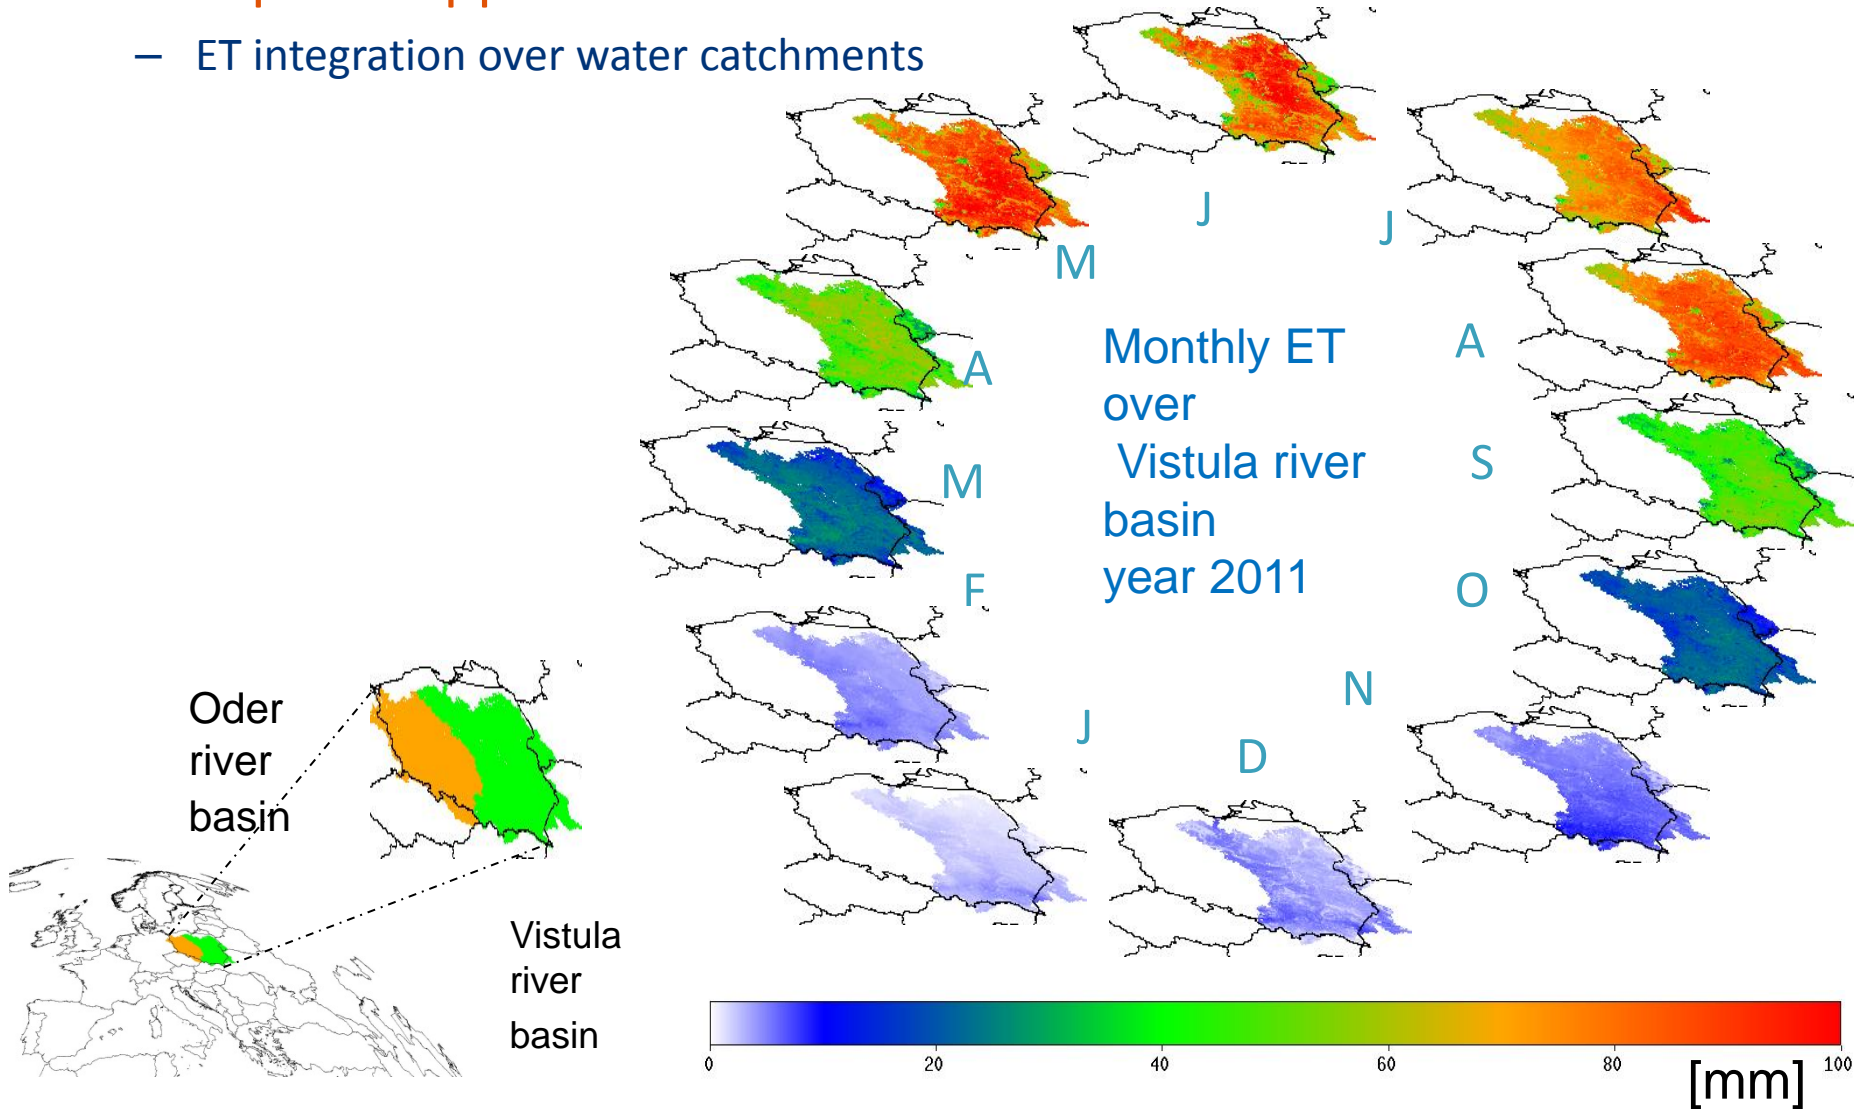

- ## Collaboration with users and participation to trainings
  - A few users' publications:
    - Sepulcre Canto, G., Vogt, J., Arboleda, A, Antofie, T., 2014: Assessment of the EUMETSAT LSA-SAF evapotranspiration product for drought monitoring in Europe, Int. J. Applied EO Geoinf, 30, 190-202.
    - Hu, G., Jia, L., & Menenti, M. 2015: Comparison of MOD16 and LSA-SAF MSG evapotranspiration products over Europe for 2011, Remote Sens. Environ., 156, 510-526.
    - Romaguera, M., Krol, M. S., Salama, M. S., Su, Z., & Hoekstra, A. Y., 2014a: Application of a remote sensing method for estimating monthly blue water evapotranspiration in irrigated agriculture, Remote Sensing, 6(10), 10033-10050.
  - Trainings: e.g. 2015: EUMETSAT/WMO "Land SAF/Satellite Products Training Course on Applications in Agro Meteorology », 23-27/03/2015, Addis Ababa, Ethiopia. Lectures on Land SAF concepts; Evapotranspiration – Concepts and exercices of using LSA-SAf ET products.
  - LSA-SAF Users Workshops: e.g. 2015: Reading (UK).

- Example of application 1
  - ET integration over water catchments

Monthly ET over
Vistula river
basin
year 2011

Oder river basin

Vistula river basin

[mm]

• Example of application 2

– Drought monitoring

Rhin river basin

Danube river basin

- ## Recent activities
  - Improvement of ET product in arid and semi-arid areas (using additional satellite input)

- ## Step 1: introduction vegetation indices from MSG SEVIRI
  ## [Leaf area index (LAI), fraction of vegetation cover]
Op version
New version

22/5/2011   23/5/2011   24/5/2011

Results obtained with the new remote-sensing variables produce higher ET values over arid/semi-arid areas with low or no impact on tempered regions of Europe.

- ## Step 1: introduction vegetation indices from MSG SEVIRI
  ## [Leaf area index (LAI), fraction of vegetation cover]

The result of the comparison between the old and new version to ground observations shows a clear improvement over semi-arid areas : correlation scores have been improved, and variability is comparable to the observations.

However, the scores at Sahelian sites have been found to be still very low, showing that the model is quite more sensitive to soil water availability than vegetation input and that the current soil moisture information was not adequate for those regions.

LSA SAF
The EUMETSAT Network of Satellite Application Facilities
Land Surface Analysis

- Step 2: assessment of SSM from LST derived heating rates

14/8/2011

H SAF H 14
SSM (SMDAS-2
real time)

Background
decision
map

SSM – MSG LST

SSM
merged

- • Step 2: assessment of SSM from LST derived heating rates

On the SM derived from LST, soil moisture patterns like annually wetlands extends/shrinks emerge as in this example over the Niger inner delta for the month of November from 2007 to 2011

Detected drought in 2011

- Step2: assessment of SSM from LST derived heating rates

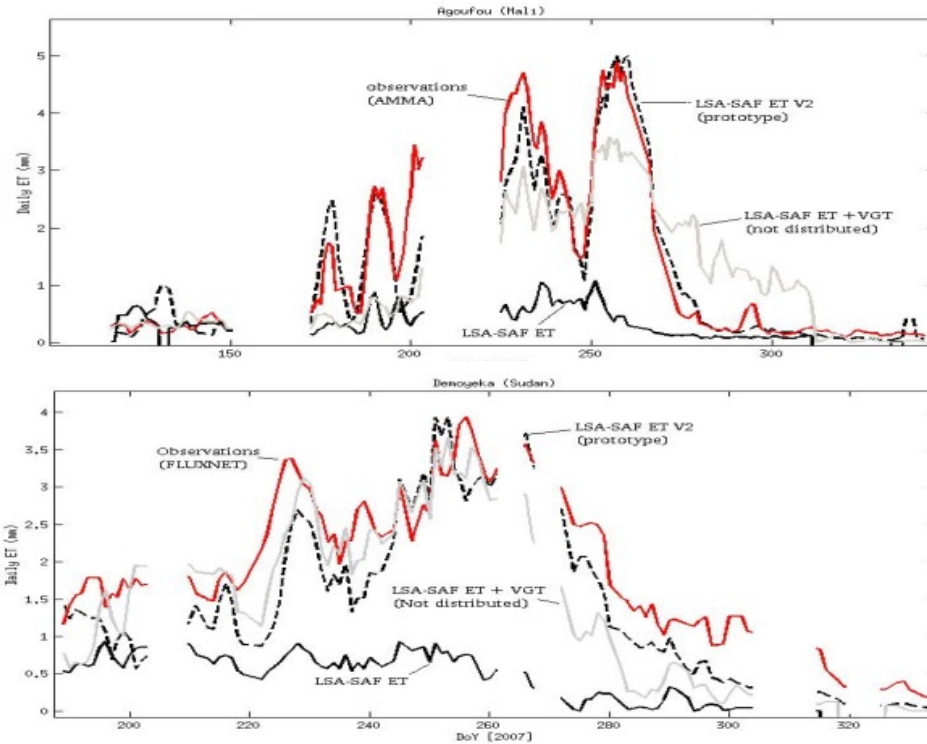

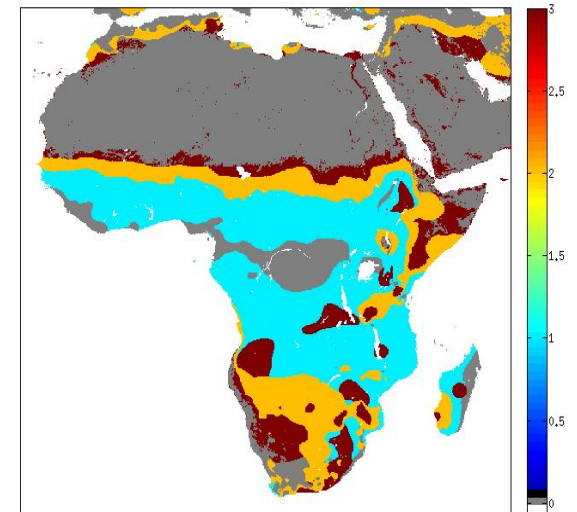

Background decision map

→improved performances using LST based SSM in Savannah.

LSA SAF
Land Surface Analysis

- **Other activities: through a combination of geostationary and polar satellites**
  - Exploration of use of vegetation products direved from polar satellite

proba VEGETATION

Daily ET (forcing
including Proba-V LAI):
year 2015

Anklam

Zarnekow

Spreewald

Schechenfilz
Nor

Case of wetlands:
An ongoing specific project (Belspo 'HiWET project', see http://hydr.squarespace.com/projecthiwet/) is dedicated to the study of ET in wetlands allowing to concentrate research on relationship between ET, vegetation characteristics and ecosystem health.

- **LSA-SAF CDOP3 phase (2017-2022)**
  – Continuation of CDOP-2 on-going activities for MSG op. product
  – **Reprocessing of full MSG archive (from 2004)**
    - → homogeneous data set (request extensive validation)
    - Expected to be ready in 2020
  – **New developments for MTG FCI**
  – Publications and conferences
  – Collaboration with users and participation to trainings

- **CM-SAF CDOP3 phase (2017-2022)**
  – Development of new datasets (ET and surface fluxes) over the
    Meteosat archive (from 1983)

- **Research continuation on ET based on EO with an increased spatial resolution**
  – Investigation of visible, thermal and microwave based products from
    Proba-V and Sentinels satellites to derive ET.

- **Developing new operational products (from 2017)**
  – Participation to Copernicus Global Land Monitoring

Conclusions

- ET cannot be directly observed through EO;

- Nevertheless, satellite EO allows to characterize land surface variables able to improve ET modelling;

- Research is on-going at RMI since years to assess ET by assimilation of geostationary and polar EO data;

- Operational products are already available in the frame of LSA-SAF and are expected to be useful in a large set of applications including hydrology;

- Contact with users in encouraged in view to develop products fitted to their needs.

We acknowledge data providers from FLUXNET, ISMN and NMS who supported the validation of our products. Our research is funded by EUMETSAT, ESA through its Prodex program and research programs of Belspo.

Thanks for your attention !

Any questions ?
