

# Enhancements for FFGS improved operations

Hydrologic Research Center

28 April 2016

# Enhancements to be discussed

- A. Multiple Mesoscale Model Input
- B. Urban Flash Flood Warning
- C. Use of satellite inundation mapping to correct soil moisture
- D. Landslide occurrence prediction

# A. Multiple Mesoscale Model Input

## BSMEFFG - Black Sea Middle East Flash Flood Guidance System

Beta Version: System is Still in Development Phase

Current Date: 2013-01-22 04:29 UTC
Nav Date: 2013-01-22 02:00 UTC

Year: 2013 Month: 01 Day: 22 Hour: 02 REGION: REGIONAL

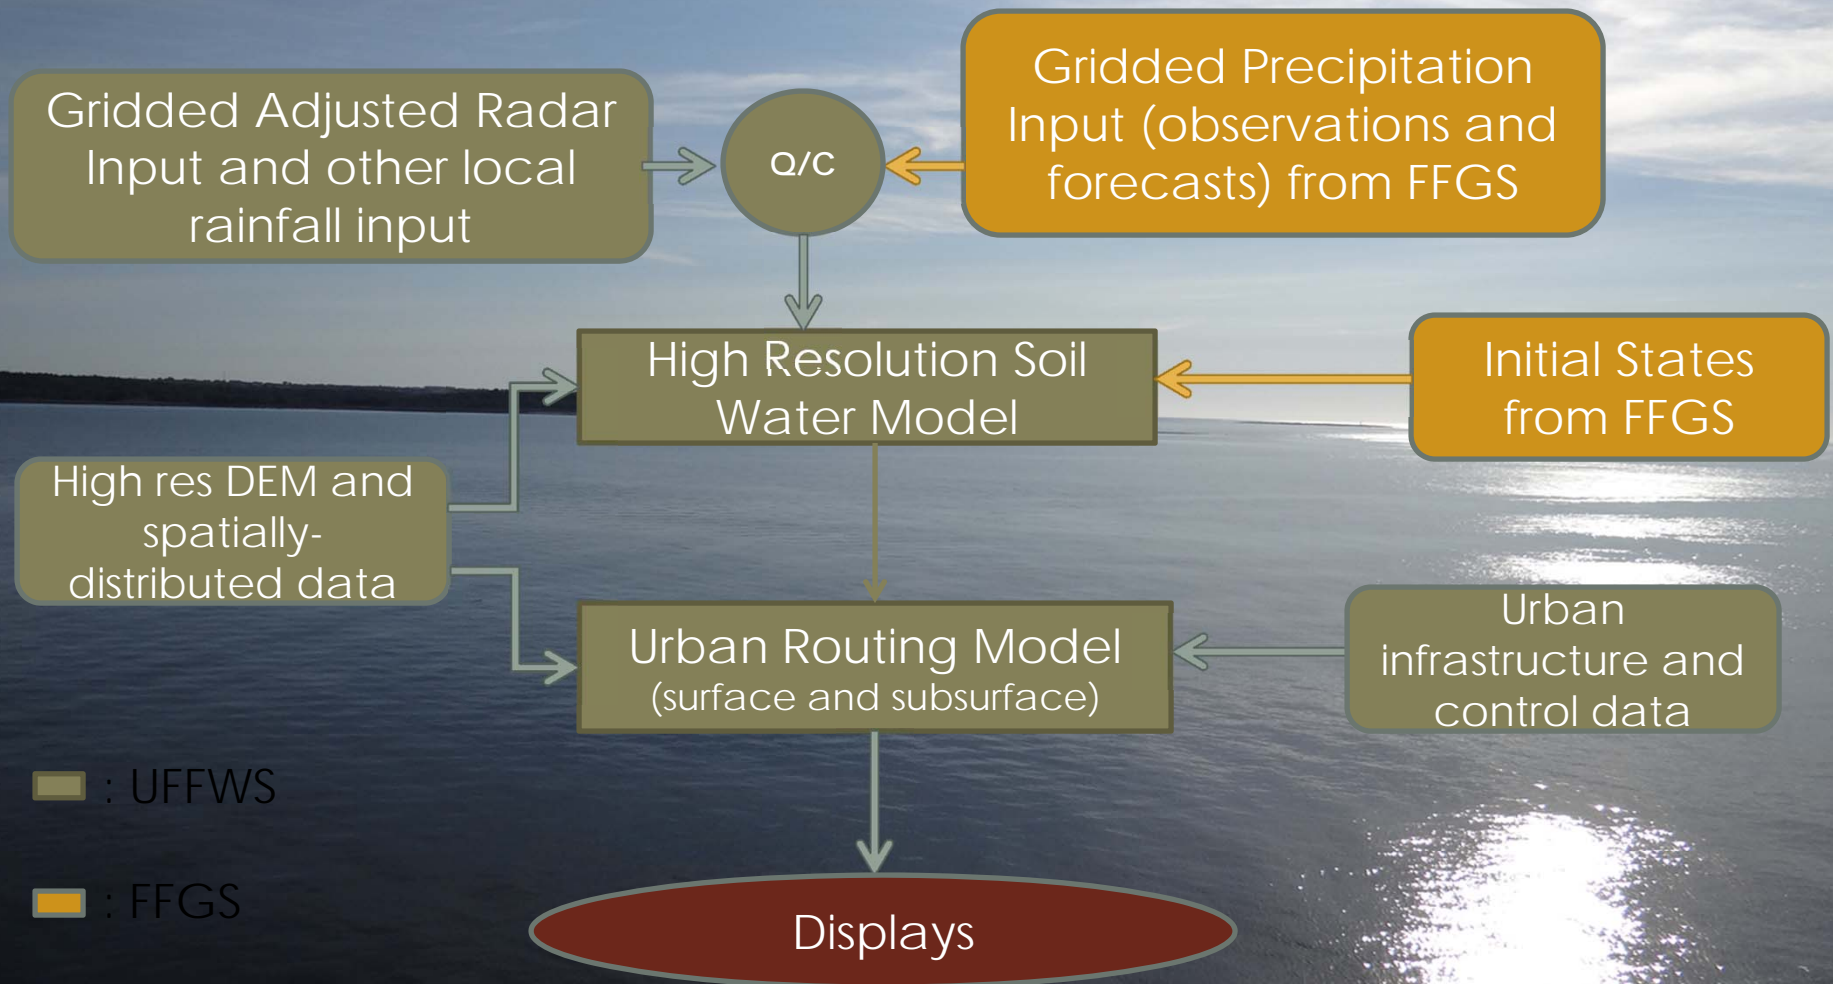

DT	RADAR Precipitation	MWGHE Precipitation	GHE Precipitation	Gauge MAP	Merged MAP	ASM	FFG	IFFT	PFFT	ALADIN Forecast	FMAP	FFFT
01- hr												
03- hr												
06- hr												
24- hr

 [EXPORTS REGIONAL 2013-01-22](#)

Surfnet Gauge Observations at 2013-01-22 00:00 UTC

## B. Urban Flash Flood Warning

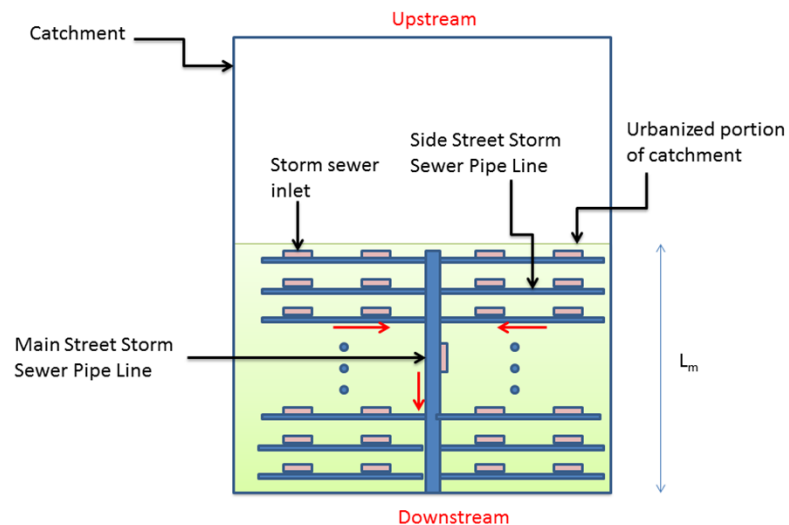

# Basic technical elements UFFWS

$$\frac{\partial y}{\partial t} + \frac{\partial(vy)}{\partial x} = 2q_L/B - f$$

$$S_f = S_0 - \frac{\partial y}{\partial x}$$

# Basic technical elements UFFWS

Total Rainfall Generating Inlet Capacity:  
 $(N_s + N_m) Q_T = (1/3.6) U_0 f_A A$

Total Storm Sewer Volume Capacity:

$$X_S^0 = \sum_{k=0}^M (\pi D_k^2 / 4) L_k$$

Time to Storm Sewer Overflow:

$$T_S^0 = - (1 / b) \ln \{ 1 - b X_S^0 / [(1/3.6) U_0 f_A A] \}$$

Scaling of Bankfull Q and Bankfull v:

$$Q_{BNKF} = \alpha A^\beta$$

# Demonstration of feasibility (city of Pretoria)

# C. Inundation Mapping for SM Estimation

## MRC FLASH FLOOD GUIDANCE SYSTEM - MRCFFG

In Operation Since 2009

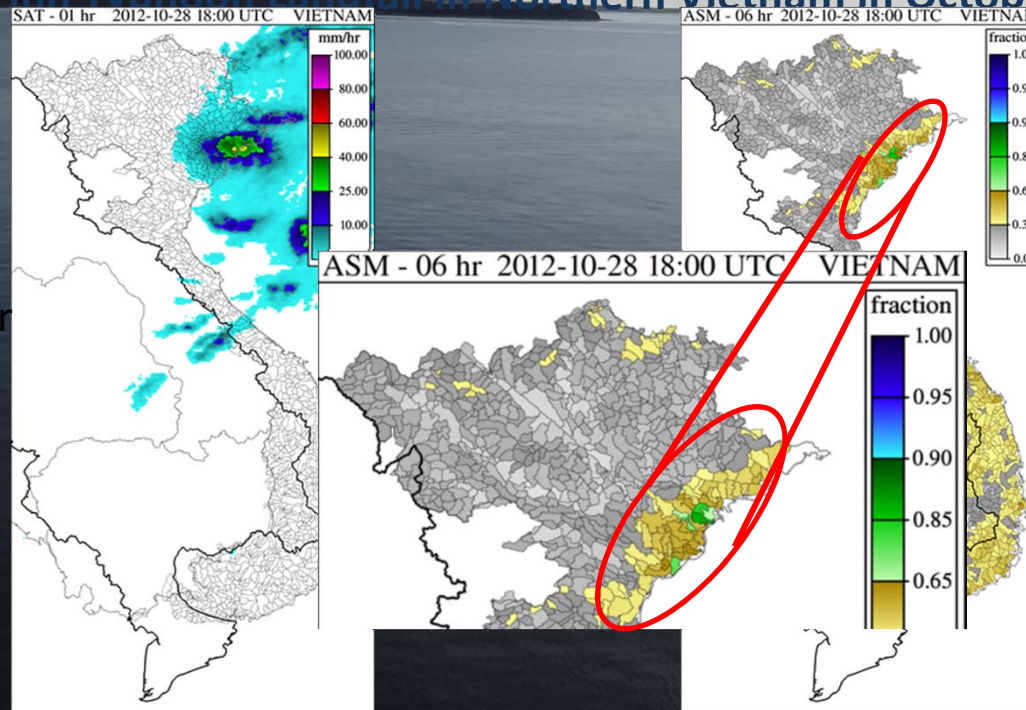

**Development/Implementation/Training:** Hydrologic Research Center

**Purpose:** Provide Regional Products with High Resolution to Forecasters in Thailand, Lao PDR, Cambodia and Vietnam to Provide Real-Time Warnings for Flash Floods

### Sample Products for Flash Flood Prone Basins Delineated in Vietnam

(Son Tinh Typhoon Landfall in Northern Vietnam in October 2012)

Precipitation  
at Landfall  
from NESDIS  
HydroEstimator

Upper-Soil Water  
Saturation Fraction  
at Landfall  
from operational  
MRCFFG  
(uses bias-adjusted  
HE pixel values)

# C. Inundation Mapping for SM Estimation

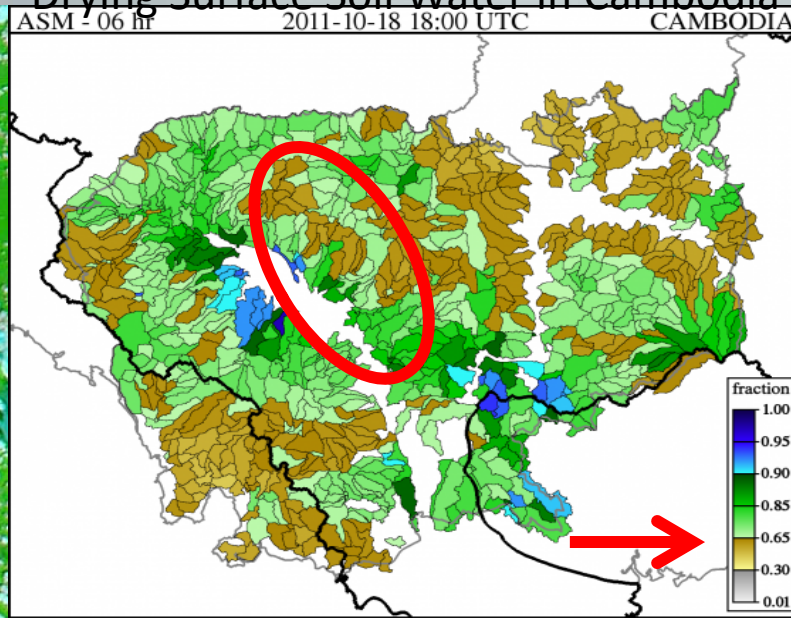

## STANDING WATER CORRECTIONS TO MODEL SOIL WATER FROM NASA PRODUCTS

MODIS-Based

MRCFFG Modeled

Observed Inundation Area in Cambodia

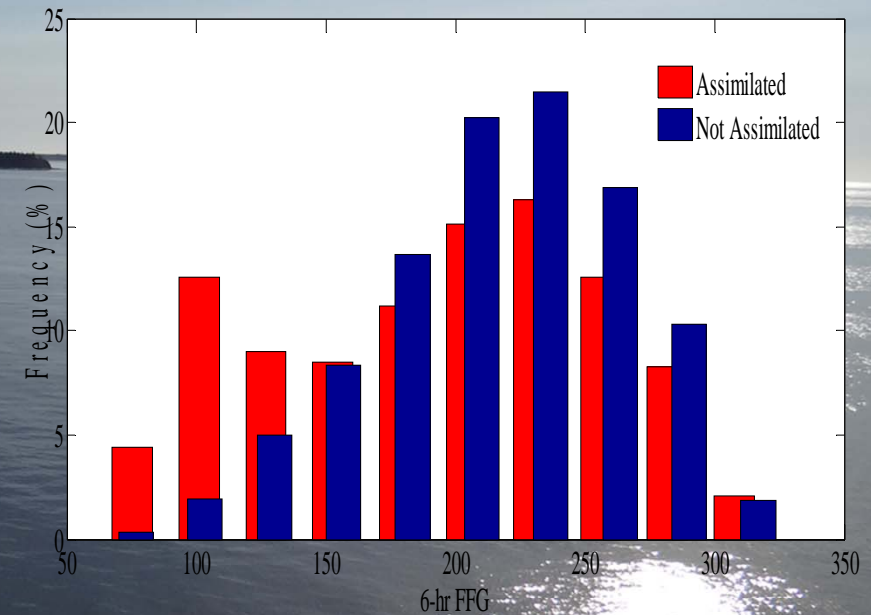

Drying Surface Soil Water in Cambodia

**HRC Current Work:** *Feasibility and Effectiveness of Correcting Operational Model Soil Water with MODIS Inundation Information in Real Time*

# C. Inundation Mapping for SM Estimation

Posner et al. *Remote Sens.* 2014, 6, 10835-10859 – Open Access

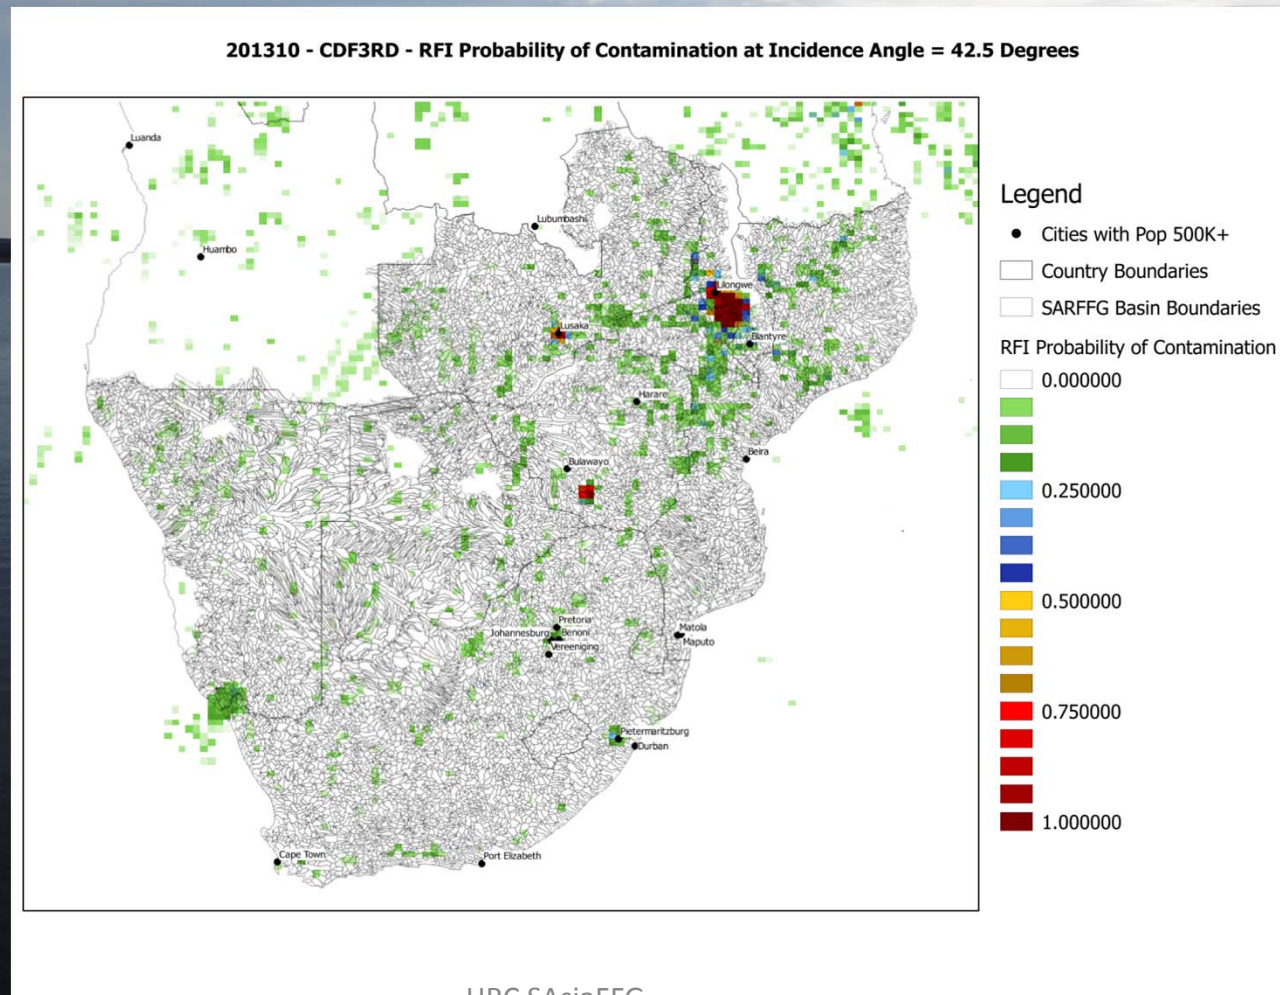

*Method: Assimilation of saturation of upper soil in catchments with inundation greater than 85% and use of soil model to adjust lower soil water.*

# C. SMOS Data

Working with WMO(Bijinski), ESA(Drusch), CESBIO(Kerr) and UGent(Verhoest) to develop a project for HRC to examine the utility of incorporating SMOS in FFG systems

Radio Frequency Interference -RFI

28 April 2016

HRC SAsiaFFG

## D. Landslide prediction using FFGS output

- D.1 Susceptibility map development in a region with an adequate database (El Salvador, Central America) (completed)
- D.2 Real Time landslide prediction using FFGS rainfall and soil water thresholds in El Salvador (completed)
- D.3 Generalization for Central America and implementation/demonstration in CAFFG (on going)

# D.1 Susceptibility Mapping

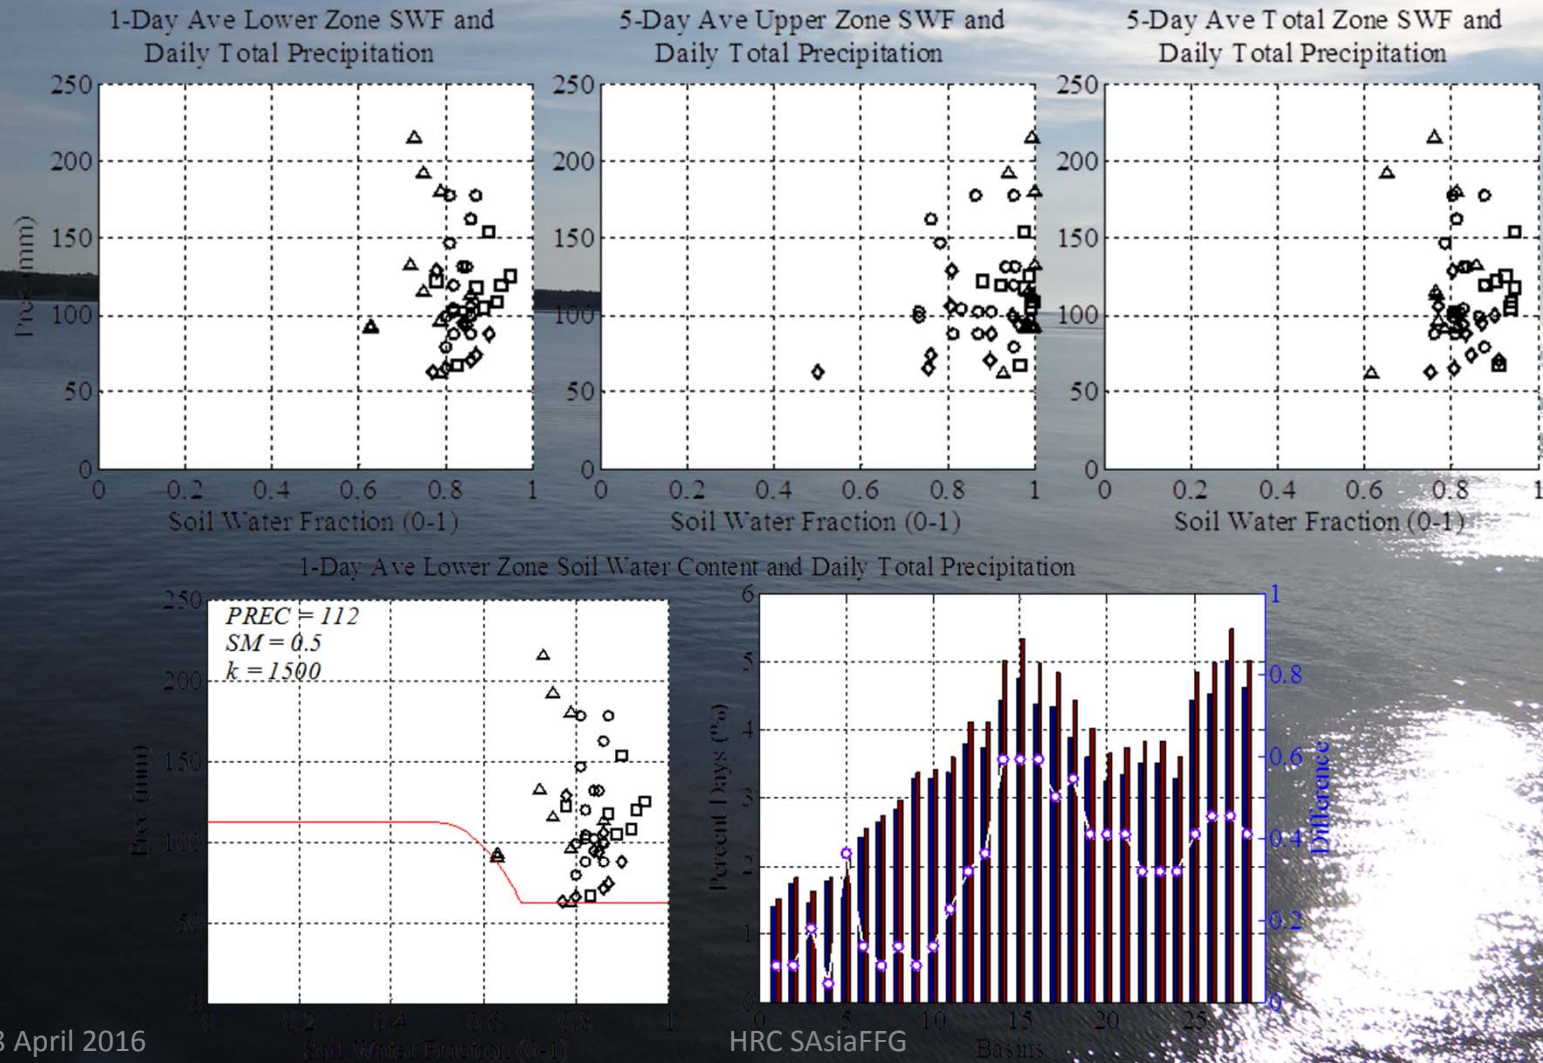

Factor  
 $W_i = \ln$

Legend  
Weight Class  
 □ Low  
 □ Medium  
 □ High  
 □ Very High

# D.2 Real-time Occurrence Prediction based on FFGS Rainfall and SM

28 April 2016

# D.3 Generalization for Central America
