General Definition of Verification

WMO specifies that the main goal of a verification process is to constantly improve the quality of the services (skill and accuracy) including;

- Establishment of a skill and accuracy reference against which subsequent changes in forecast procedures or introduction of new technology can be measured,
- Identification of the specific strengths and weaknesses in a forecaster's skill and the need for forecaster training and similar identification of a model's particular skill and the need for model improvement, and
- Information to the management about a forecast program past and current level of Skill to plan future improvements; information can be used in making decisions concerning the organizational structure, modernization and restructuring the national Hydrometeorological services.
