CONCORDIASI

The Concordiasi experiment

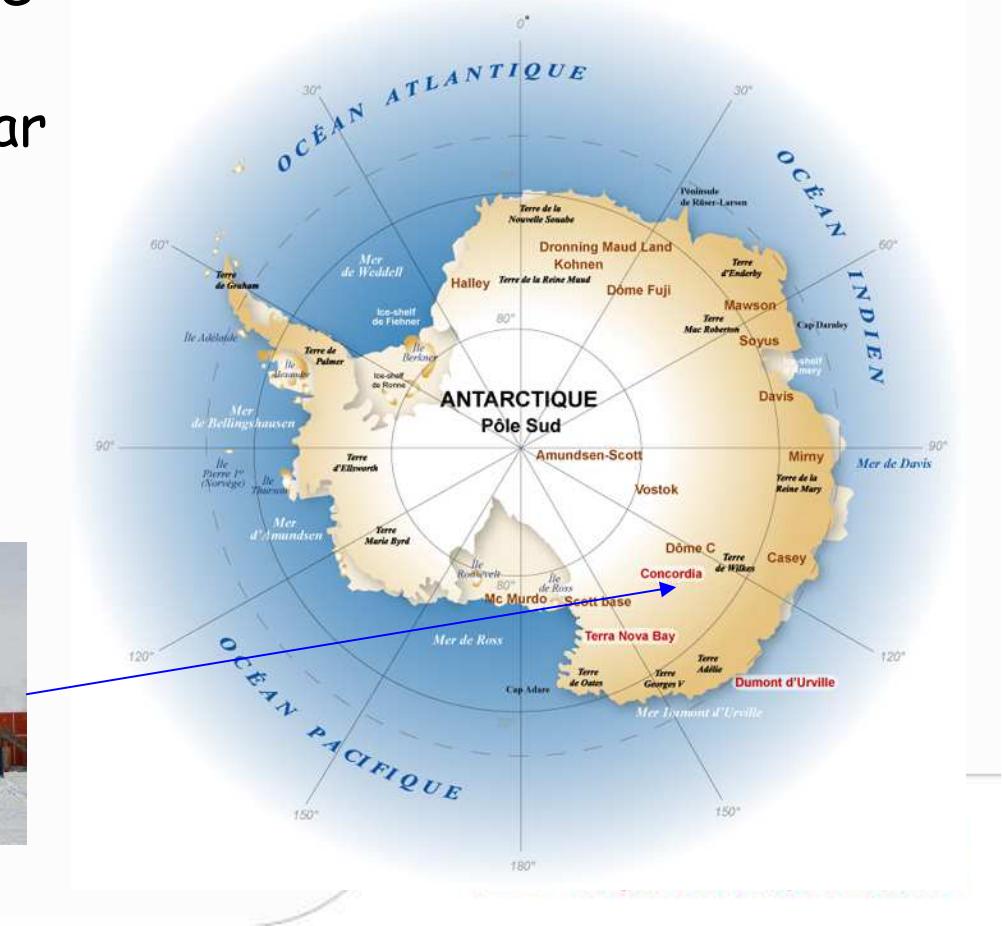

Concordiasi = CONCORDIA-IASI

A French-US initiative for climate / meteorology over Antarctica

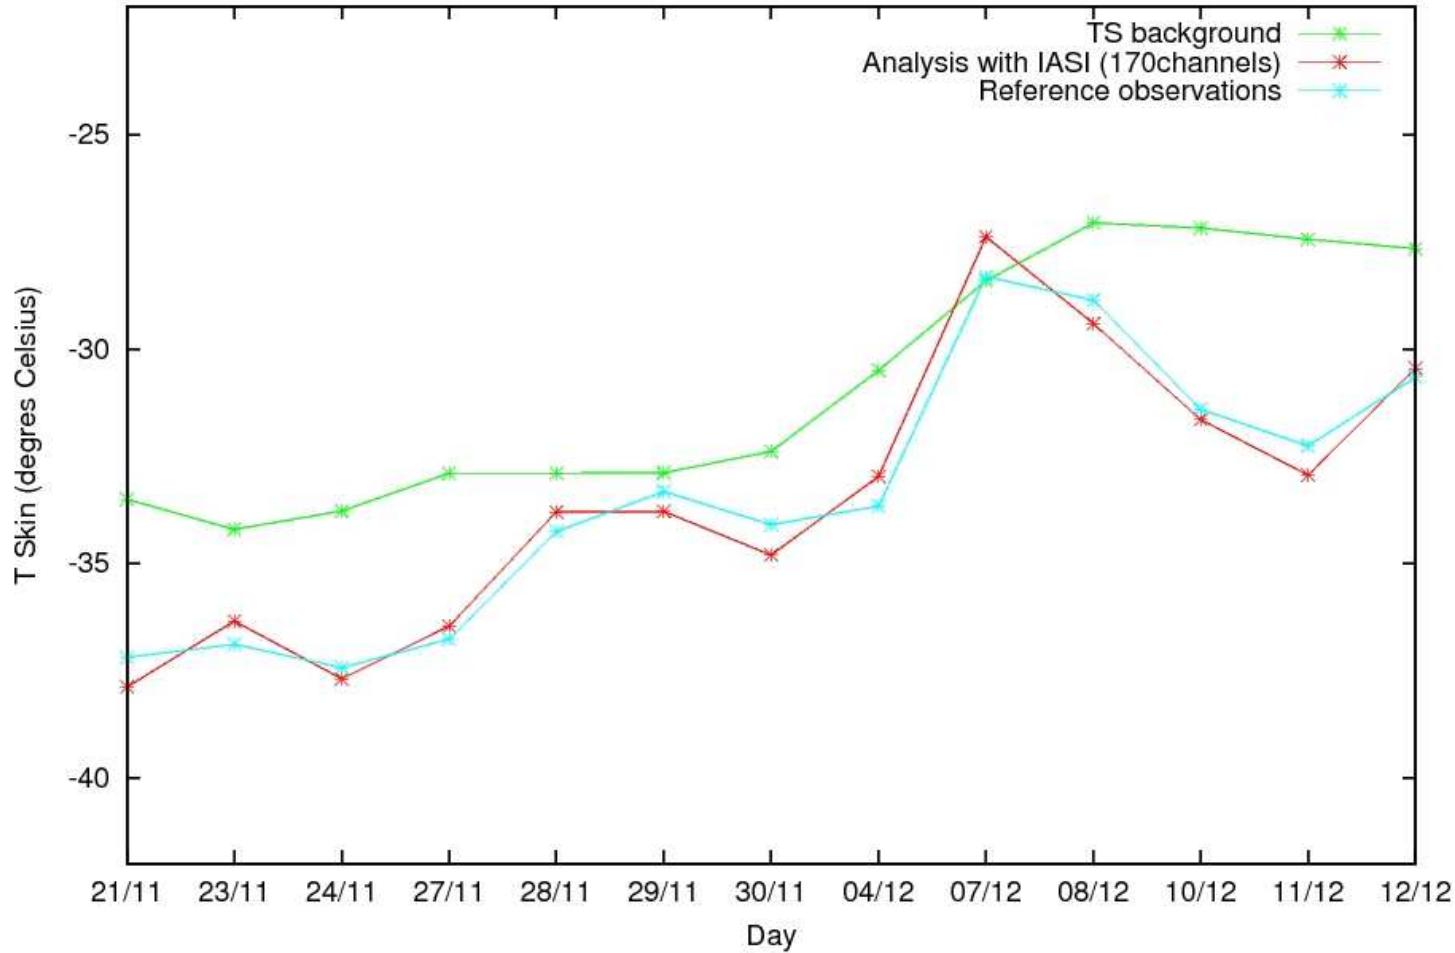

Improve the use of space-borne atmospheric sounders over polar regions, in particular IASI on board MetOp

Benefit from the continental French-Italian station
Concordia

IASI retrievals at Concordia

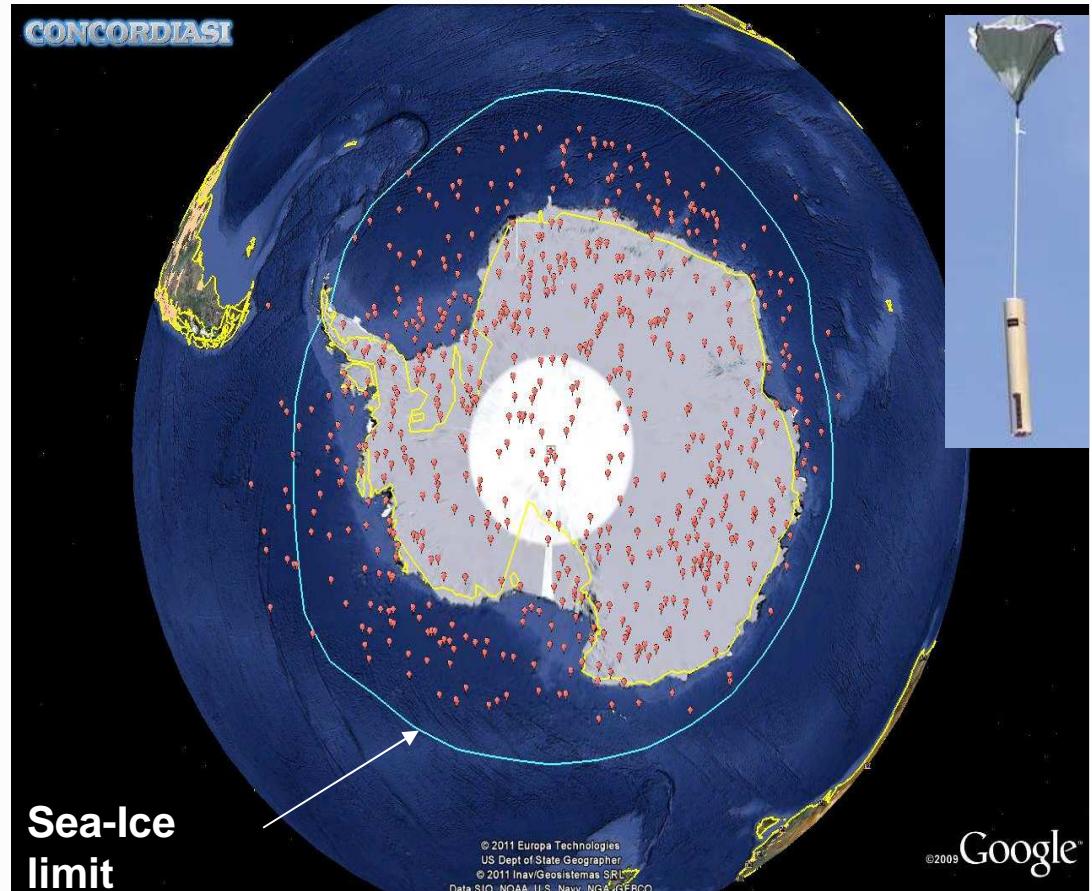

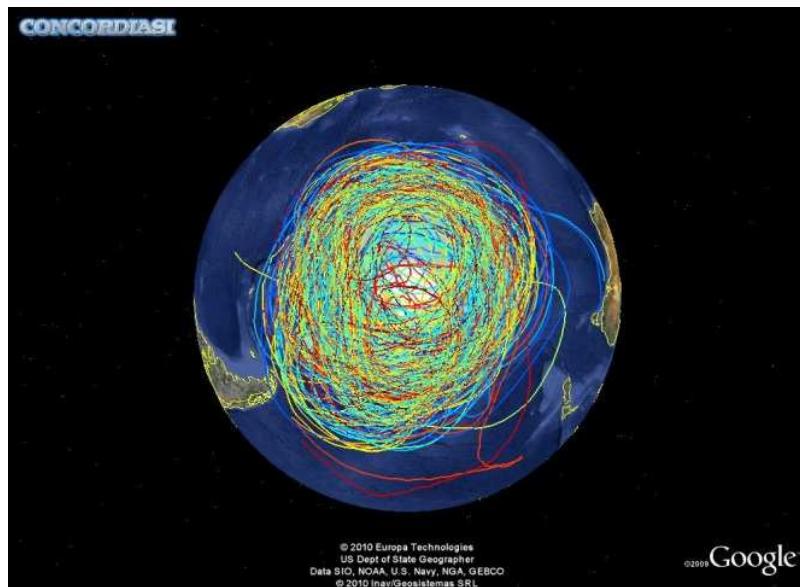

Temporal variation of TSkin - clear cases November and december 2009

Good agreement of retrievals for Skin Temperature, compared to
in situ data

(BSRN, manual measurements)

640 Dropsondes (20100923-20101201)

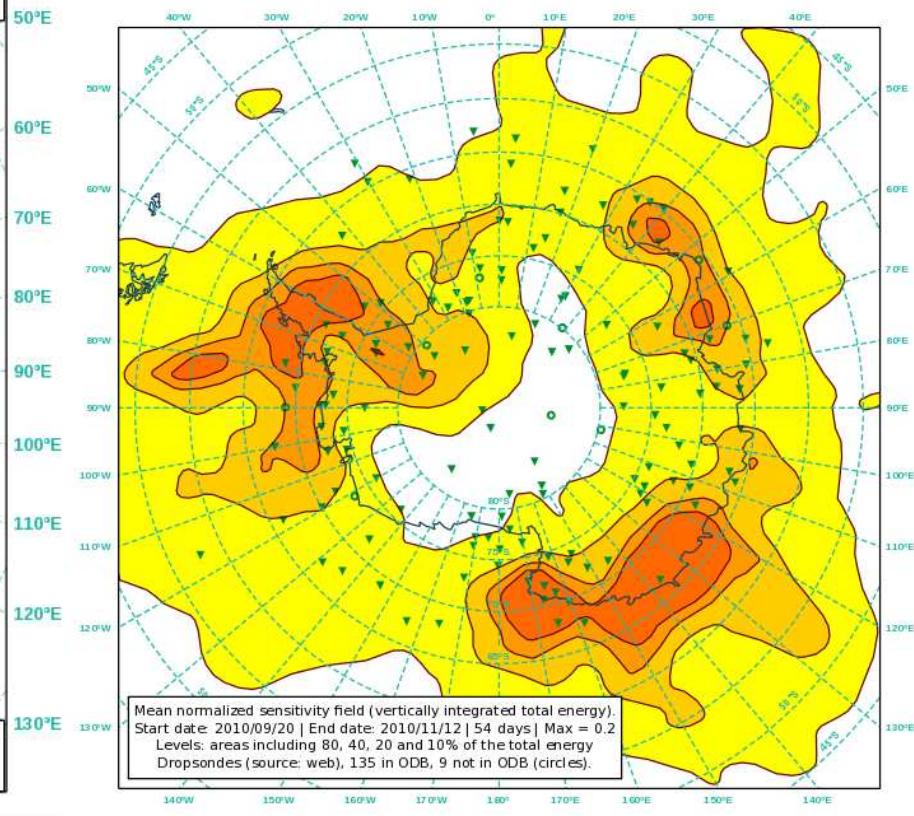

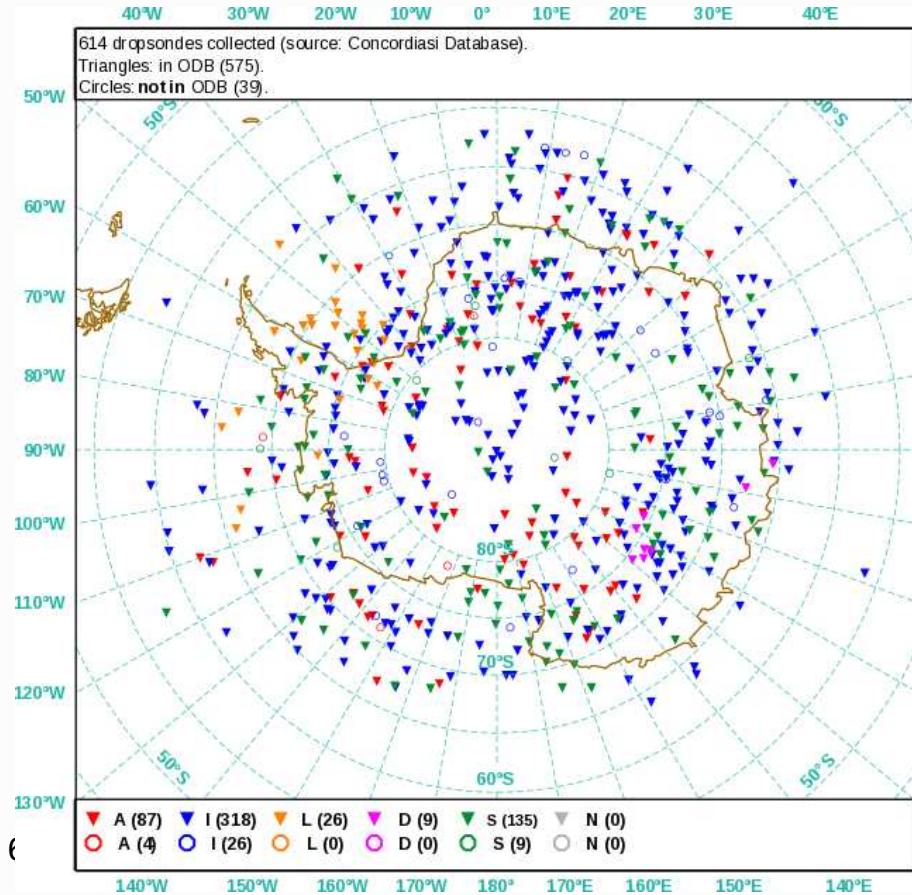

13 driftsondes launched

Flight-level data and dropsonde observations on GTS

Dropsondes to calibrate the assimilation

Most of the sondes are dropped when coinciding MetOp overpasses + A-train
Part of the dropsondes are deployed in sensitive areas
Some in the Weddell Sea or near Concordia

Sensitive areas

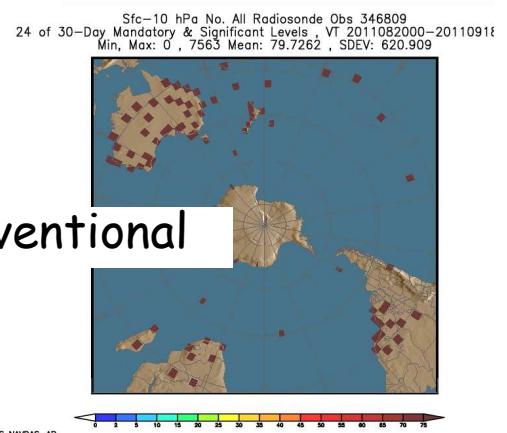

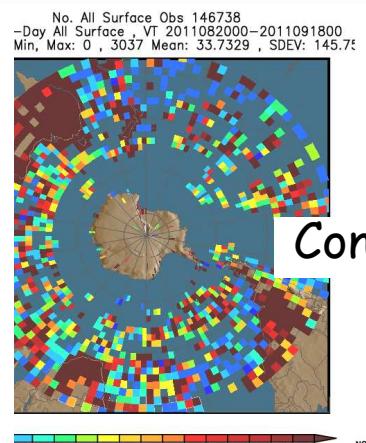

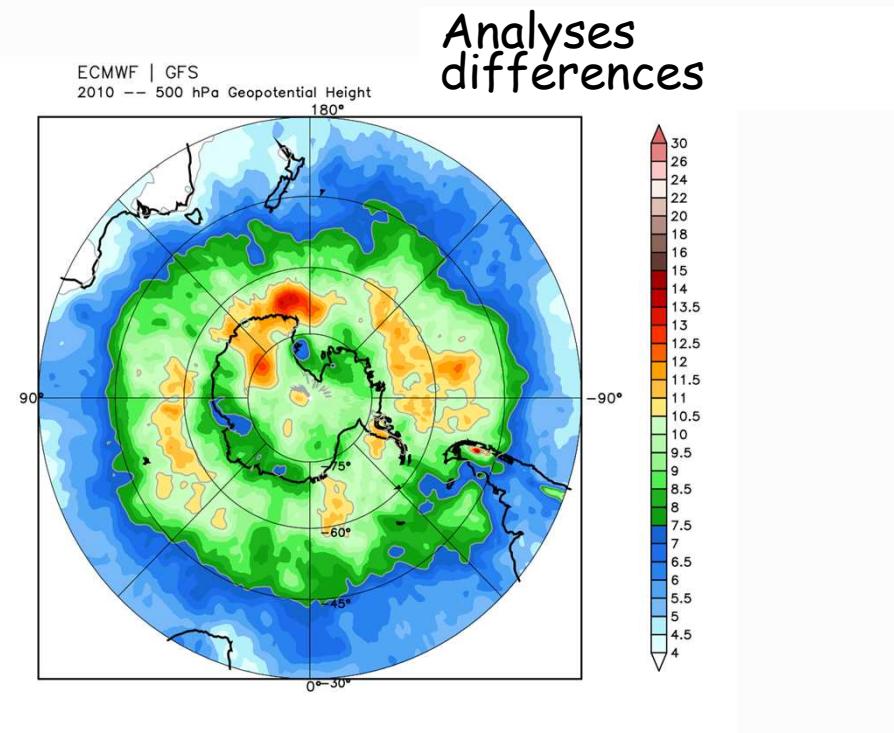

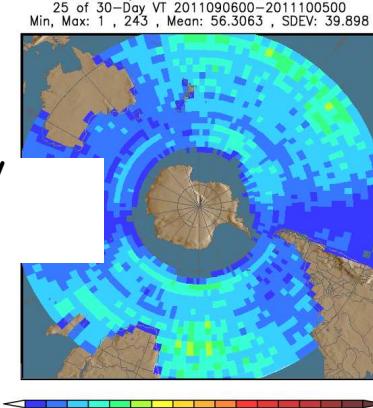

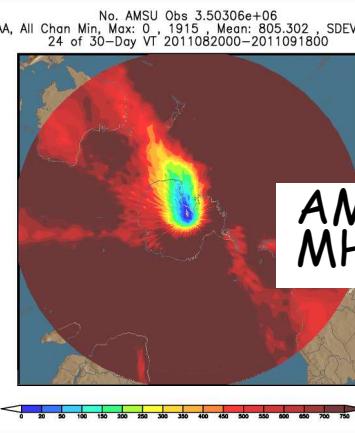

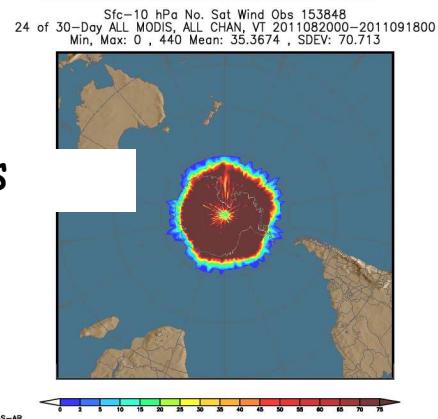

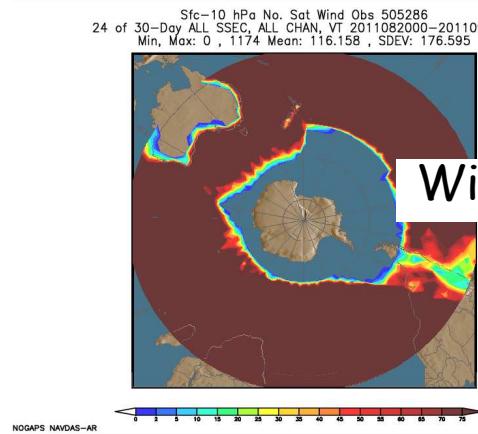

Model uncertainty in the Southern Polar Area

The Ring of Uncertainty 45°S to 70°S

To the north: Geostationary satellite winds, ship surface obs, commercial aircraft routes

To the south: Antarctic raobs and land surface data, MODIS and AVHRR winds

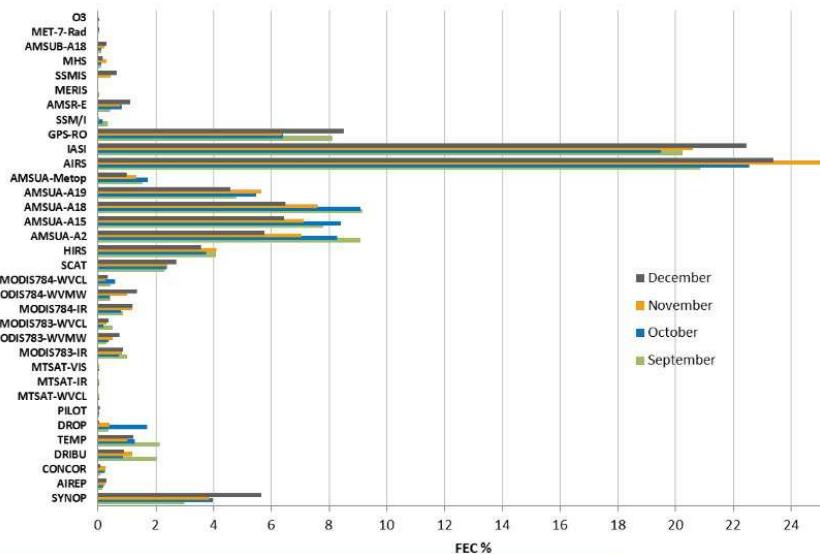

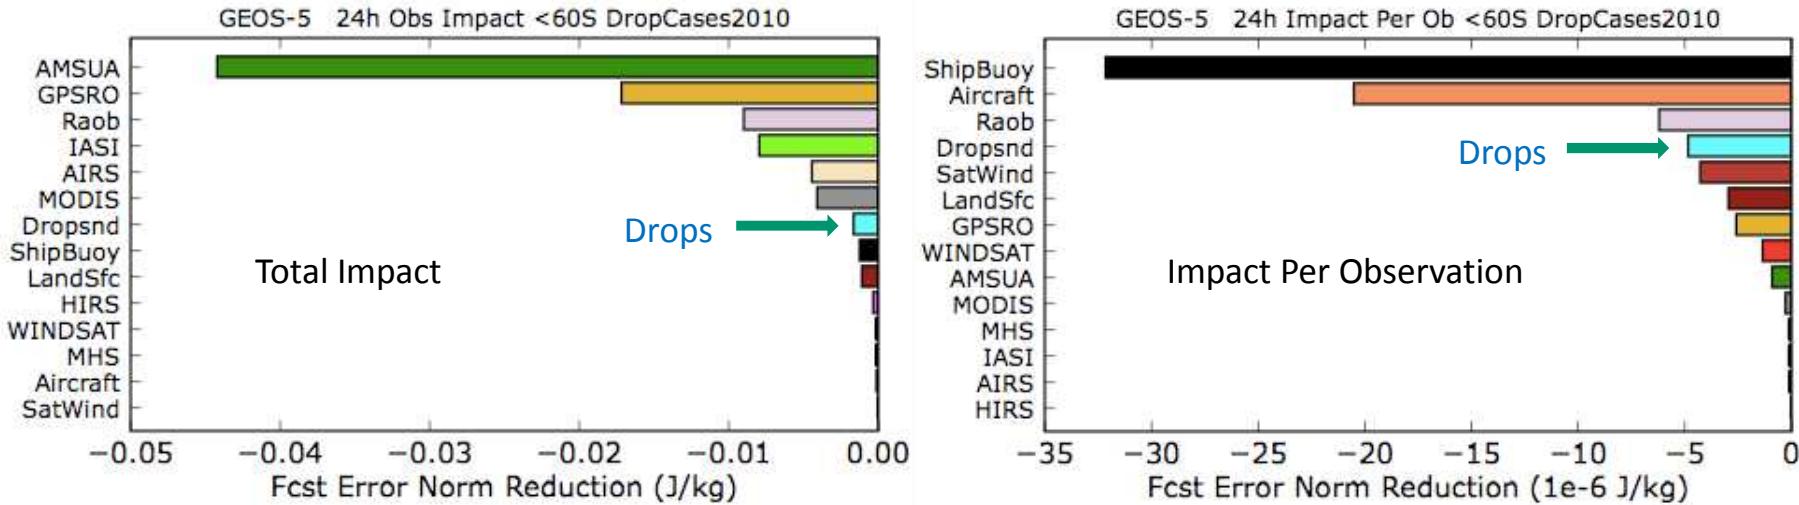

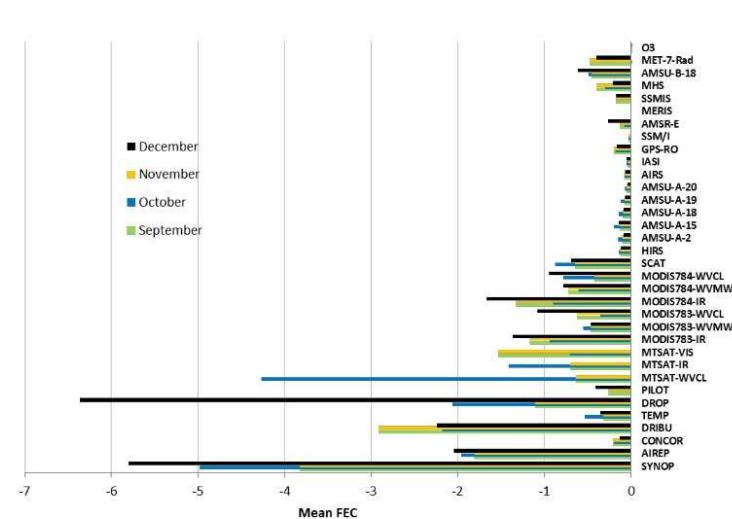

Impact of observations

GEOS-5 and ECMWF Observation Impacts for Concordiasi

Average for All Drop Cases - 60°S-90°S Observations

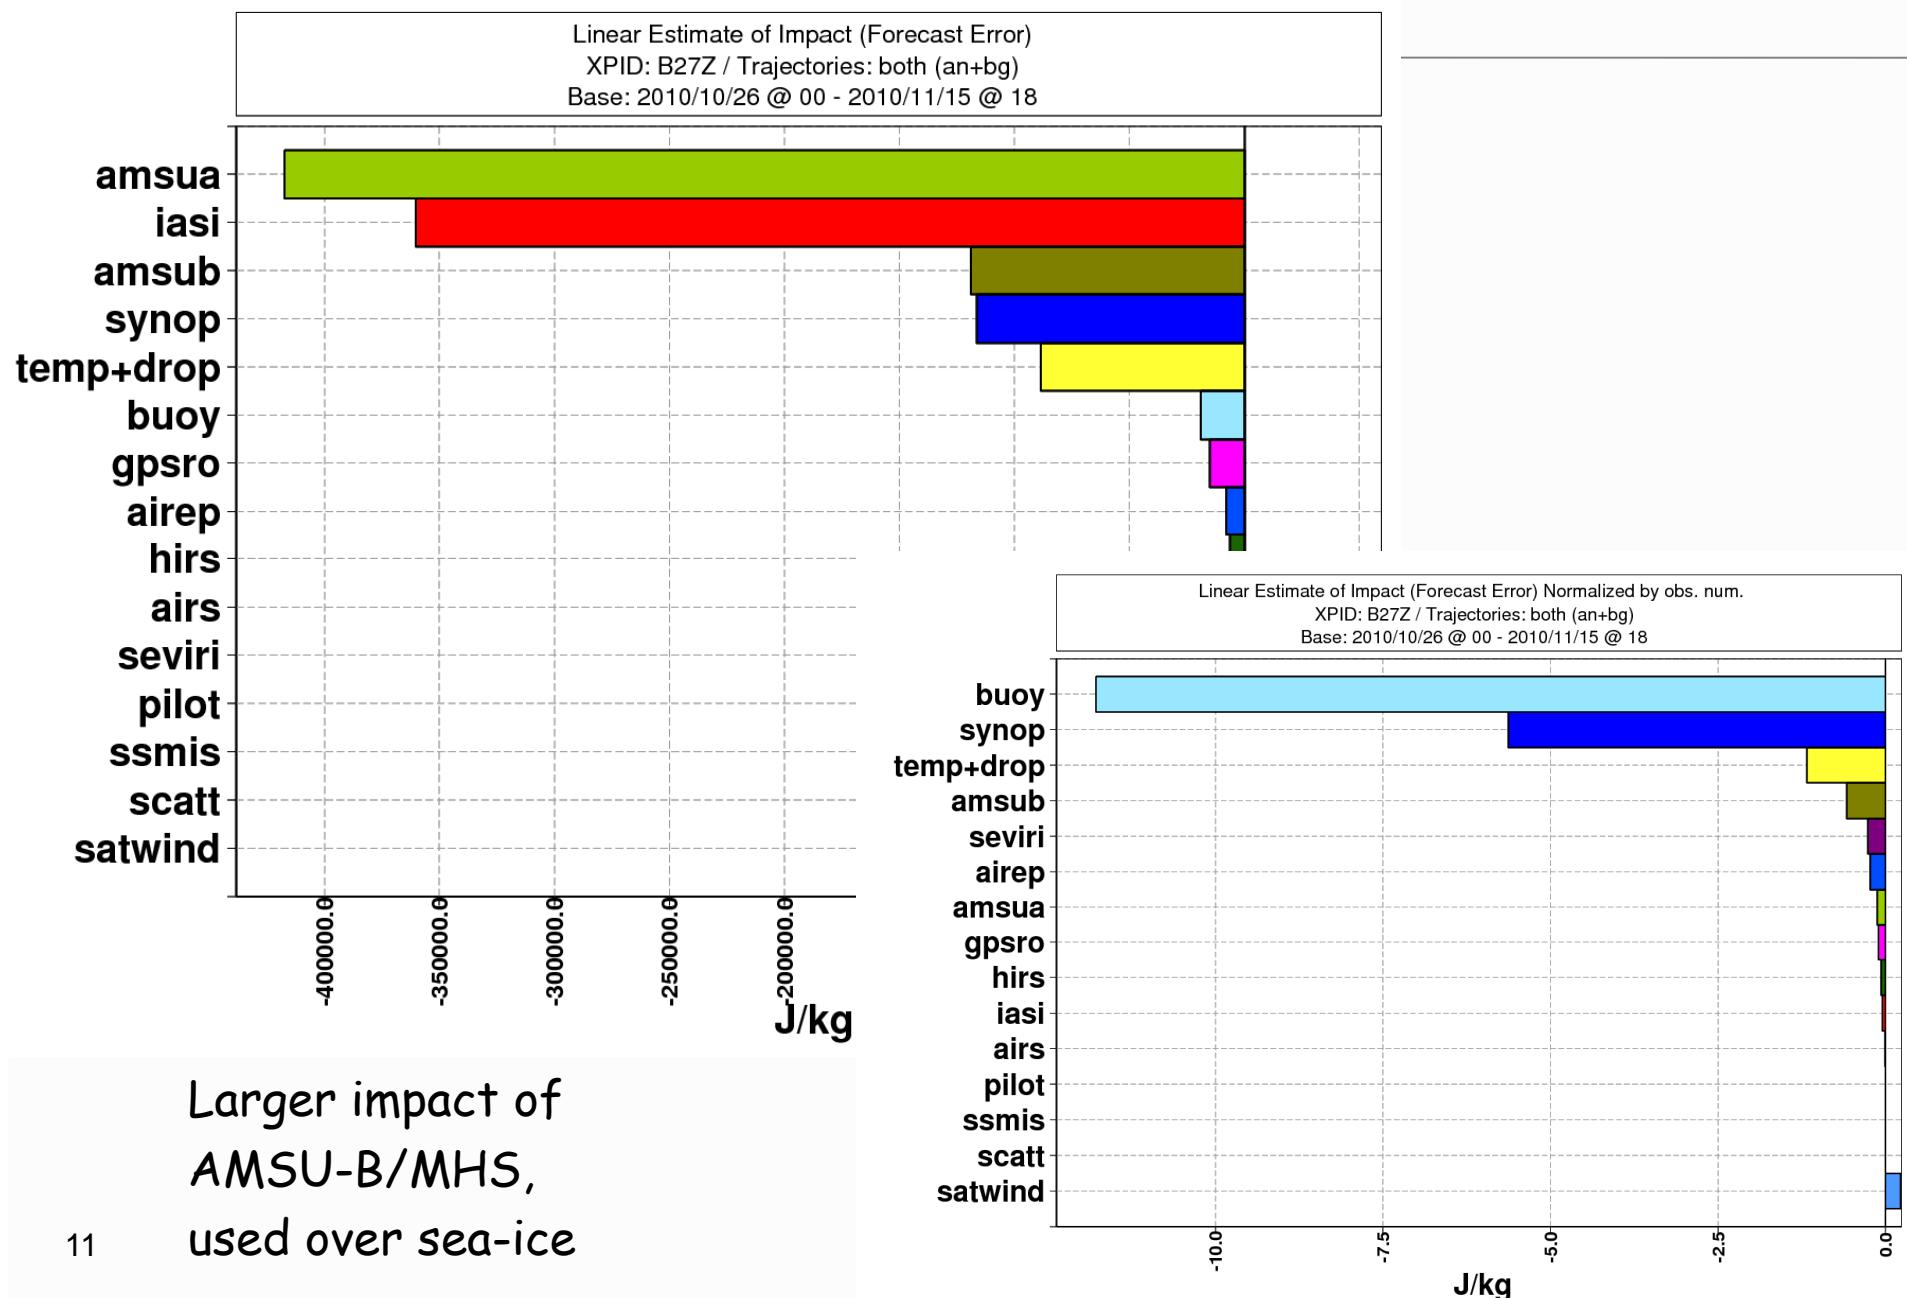

J: forecast error south of 60S

Same as previous but normalised by number of observations

At Meteo-France (obs south of 60 S)

Observation impact in Navy Global Model with 4d-Var

Ob Impact results for Concordiasi

October 2010 (124 analyses and forecasts)

NOGAPS-NAVDAS_AR (4d-Var) operational forecast system
 Observation Impact on 24hr forecast error norm (total moist energy)
 For observations in geographic domain south of 60°S

Observation Type	Summed Impact $J kg^{-1}$	Impact per-ob $\times 10^{-5} J kg^{-1}$	Number Obs

NRL-Monterey

Most important data types for different systems

	In decreasing order of importance
ECMWF	AIRS and IASI, AMSU-A, GPS-RO, MODIS, HIRS, Synop, RAOB, Buoy
NASA	AMSU-A, GPS-RO, IASI and AIRS, RAOB, MODIS, Buoy, Synop, HIRS
NRL	MODIS, AMSU-A, IASI, RAOB, Synop, AVHRR, GPS-RO, LEO-GEO
MF	AMSU-A, IASI and AIRS, AMSU-B, Synop, RAOB, Buoy, GPS-RO, HIRS

Large impact of AMSU-B over sea ice, used at Meteo-France

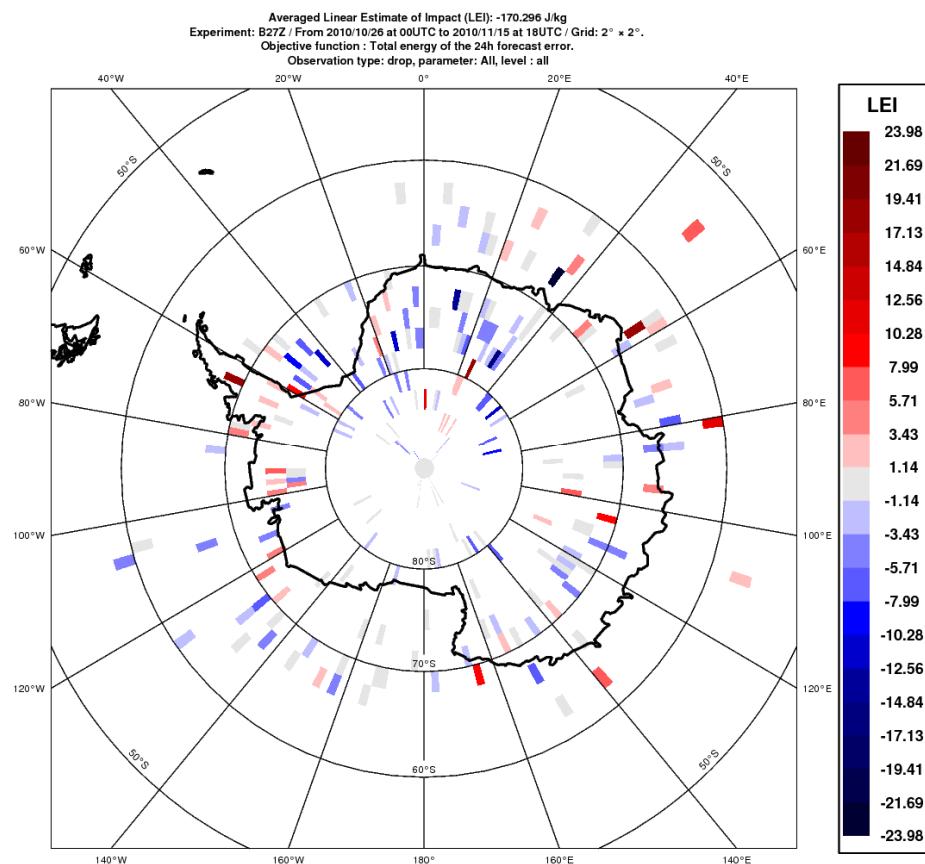

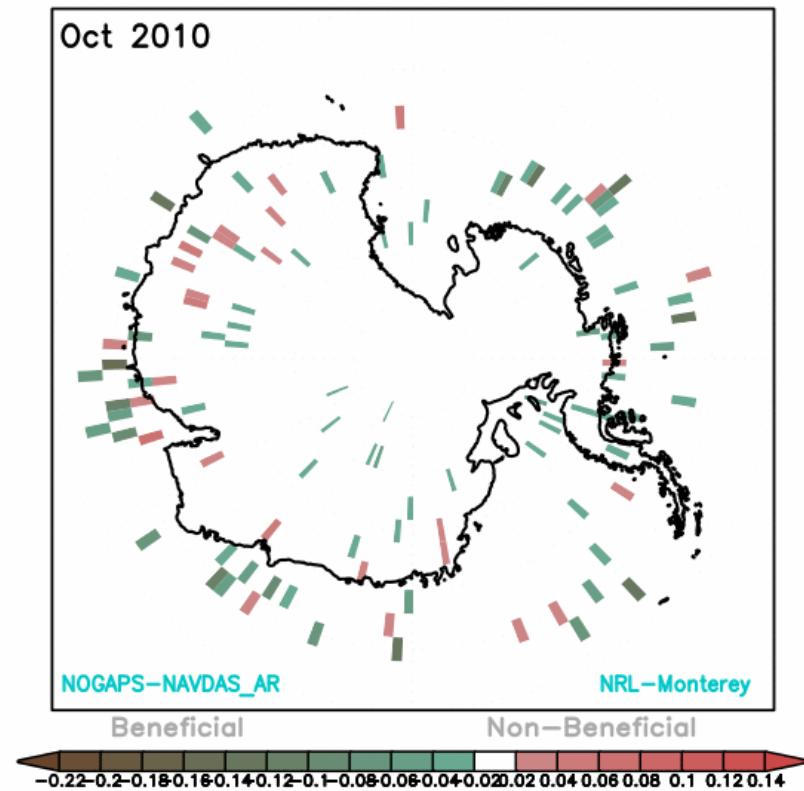

Impact of dropsondes

Sensitivity to dropsonde observations (NRL and MF)

Amount of dropsonde data deployed during part of Concordiasi
26 September - 30 November 2010
58,679 observation data (T, u, v, q)

Approximately the same amount of data provided by
three additional radiosonde stations with 00UTC and 12UTC daily
soundings

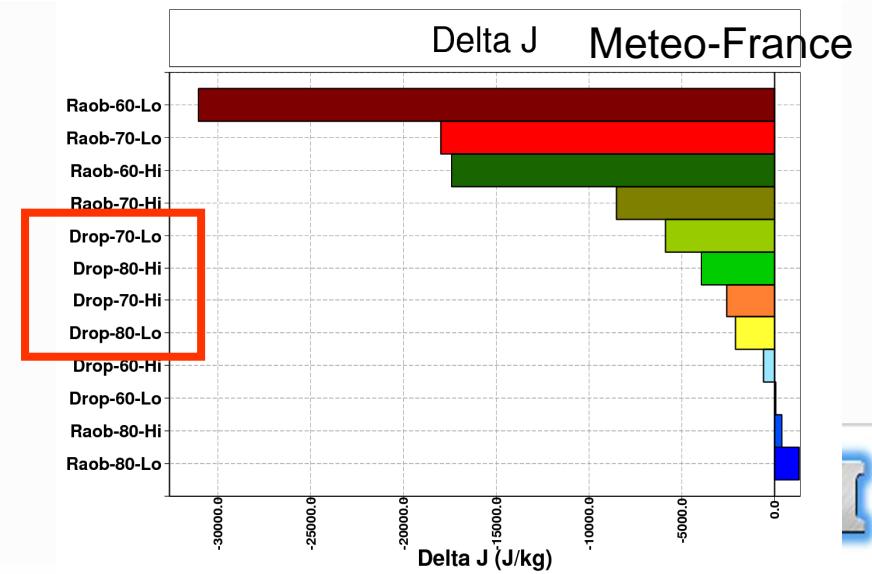

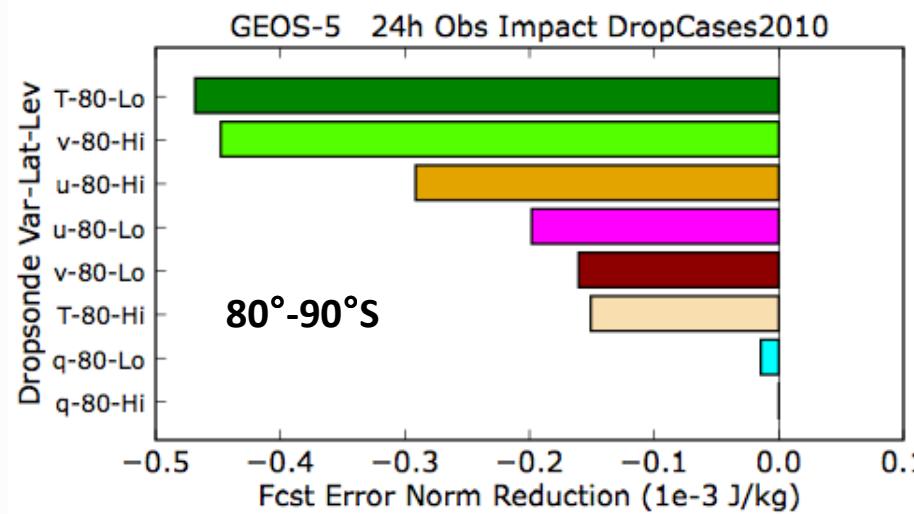

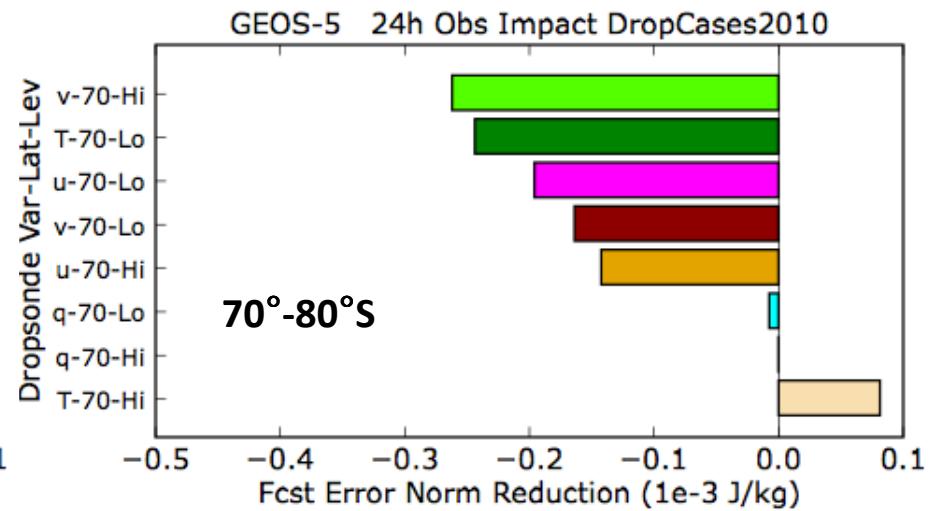

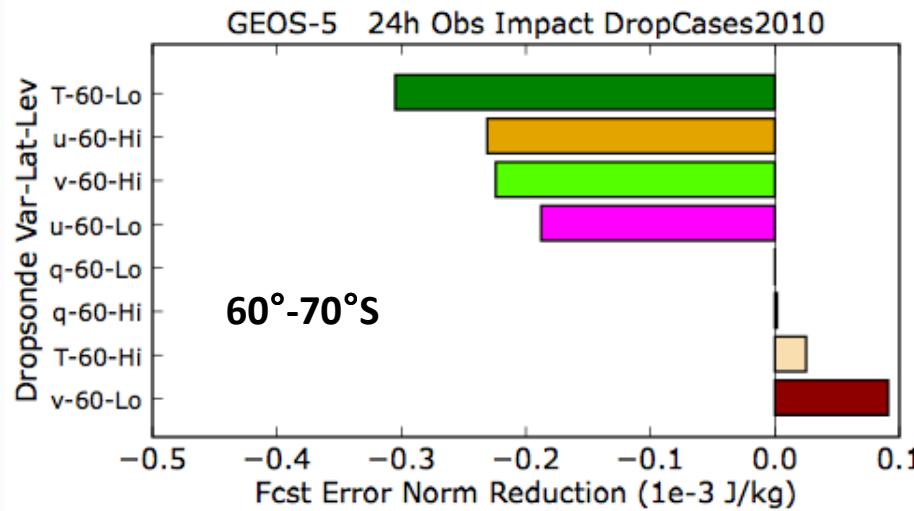

DROPSONDE Impact on 24h Fcst Error Norm

Observation Impacts for Concordiasi at GMAO and MF

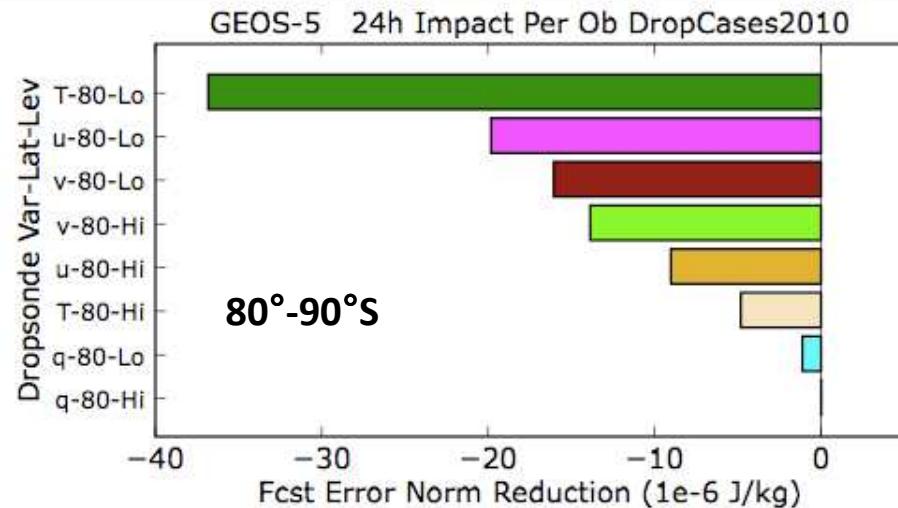

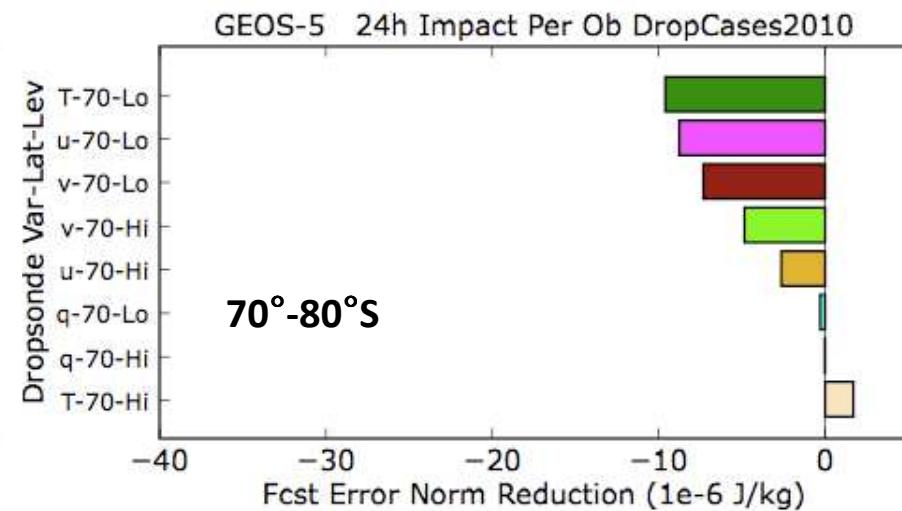

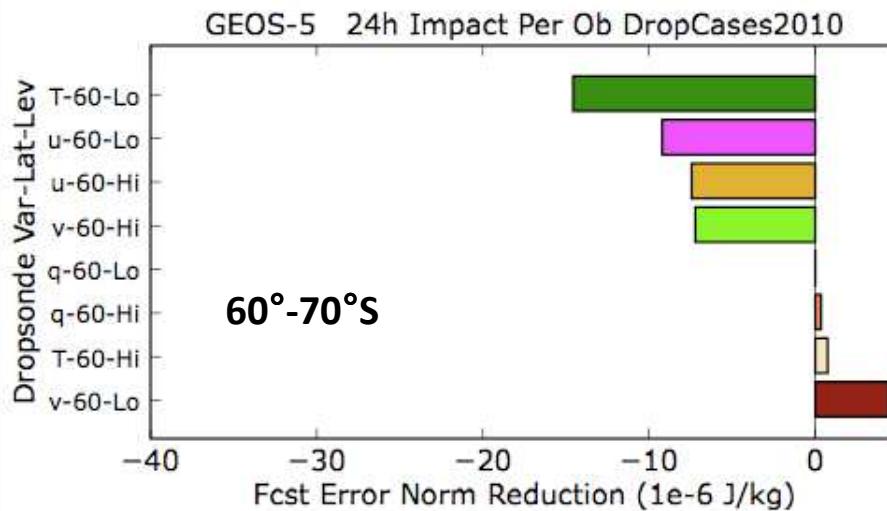

Dropsonde u,v,T,q - Averages for All Drop Cases

Dropsonde Observation Impact

GEOS-5 Observation Impacts for Concordiasi Dropsonde u,v,T,q - Averages for All Drop Cases

Impact Per-Observation

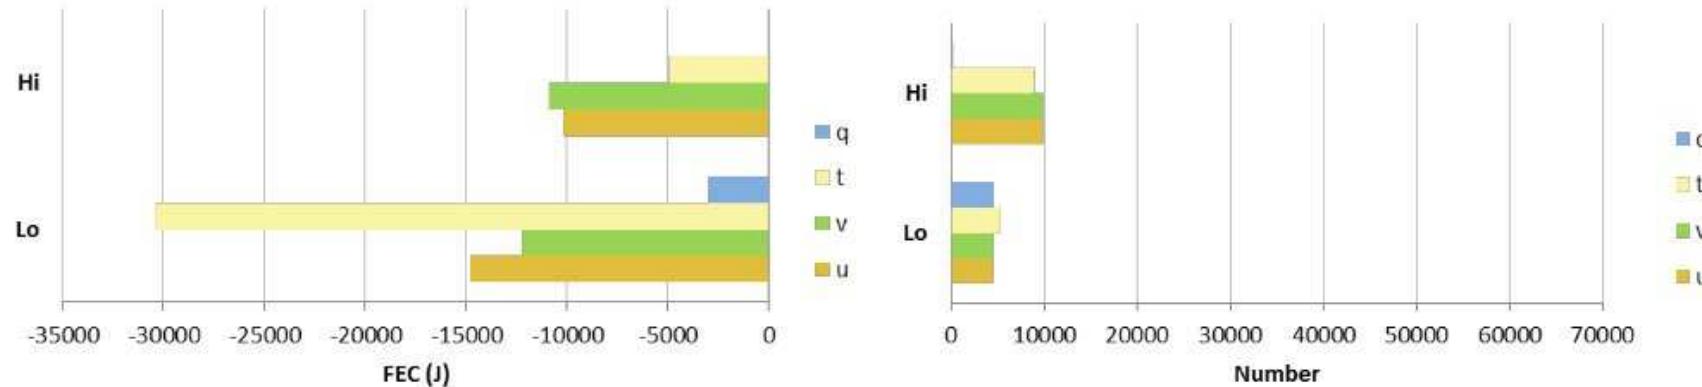

Larger impact at higher latitudes,

Over Antarctic plateau

where less other data are assimilated

Dropsonde and Radiosonde impact Sep-Dec 2010 at ECMWF

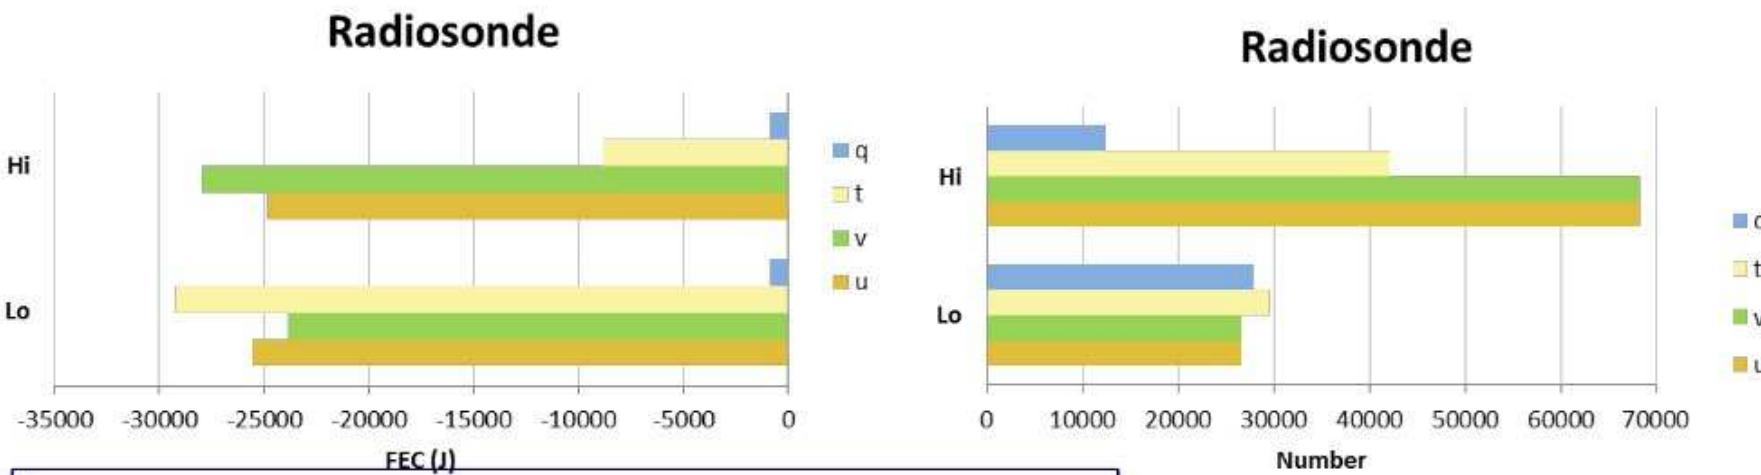

Dropsonde

Hi: < 400 hPa

LO: > 400hPa

Dropsonde

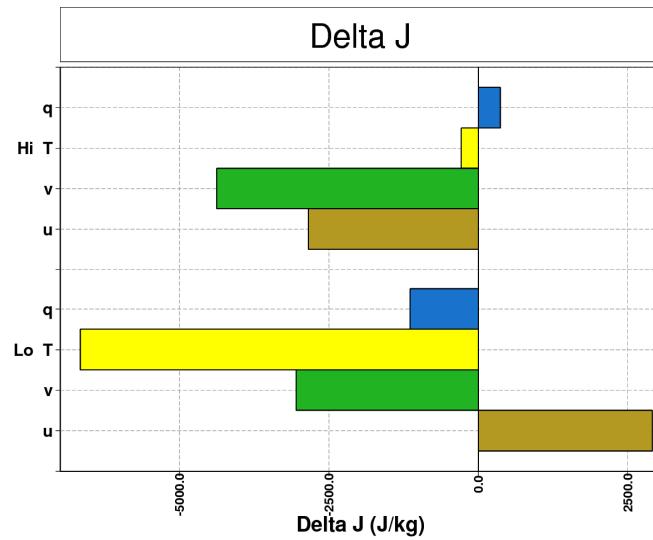

Hi: < 400 hPa

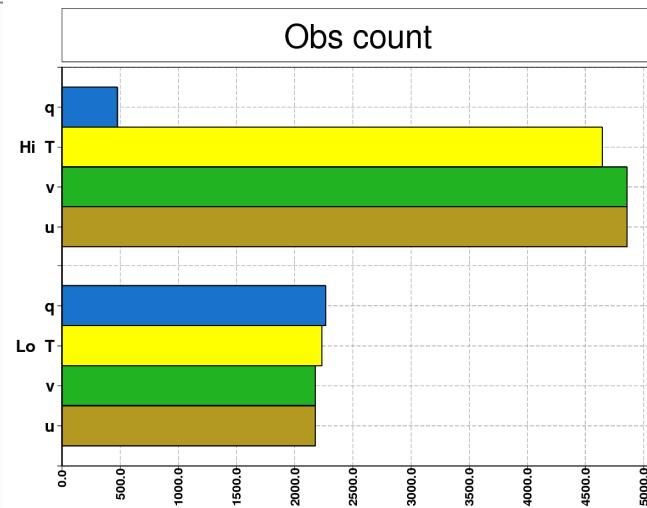

LO: > 400hPa

Dropsonde and Radiosonde impact Oct-Nov 2010 at Meteo-France

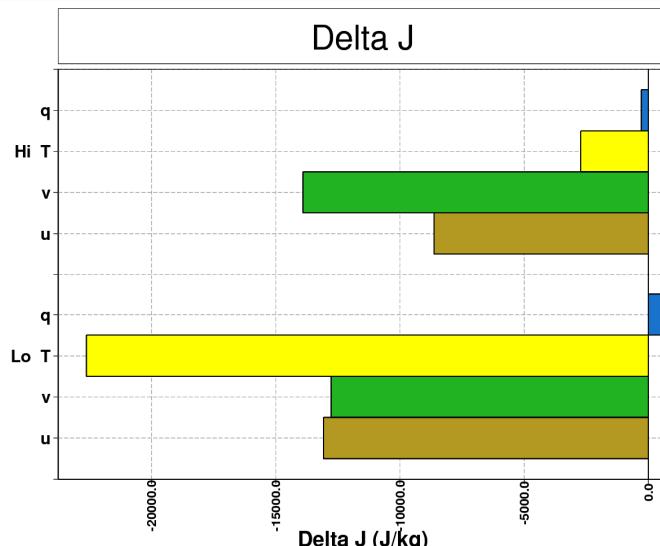

Dropsonde

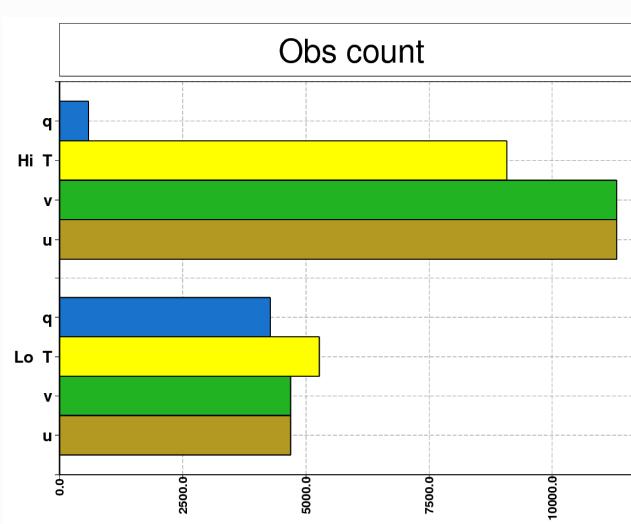

Dropsonde

Radiosonde

Radiosonde

Summary of dropsonde results

Larger impact at **higher latitudes**,

Over Antarctic plateau where less other data are assimilated

More impact from **winds at higher levels**

More impact from **temperature at lower levels**

OSEs

Assimilation of gondola information at DWD

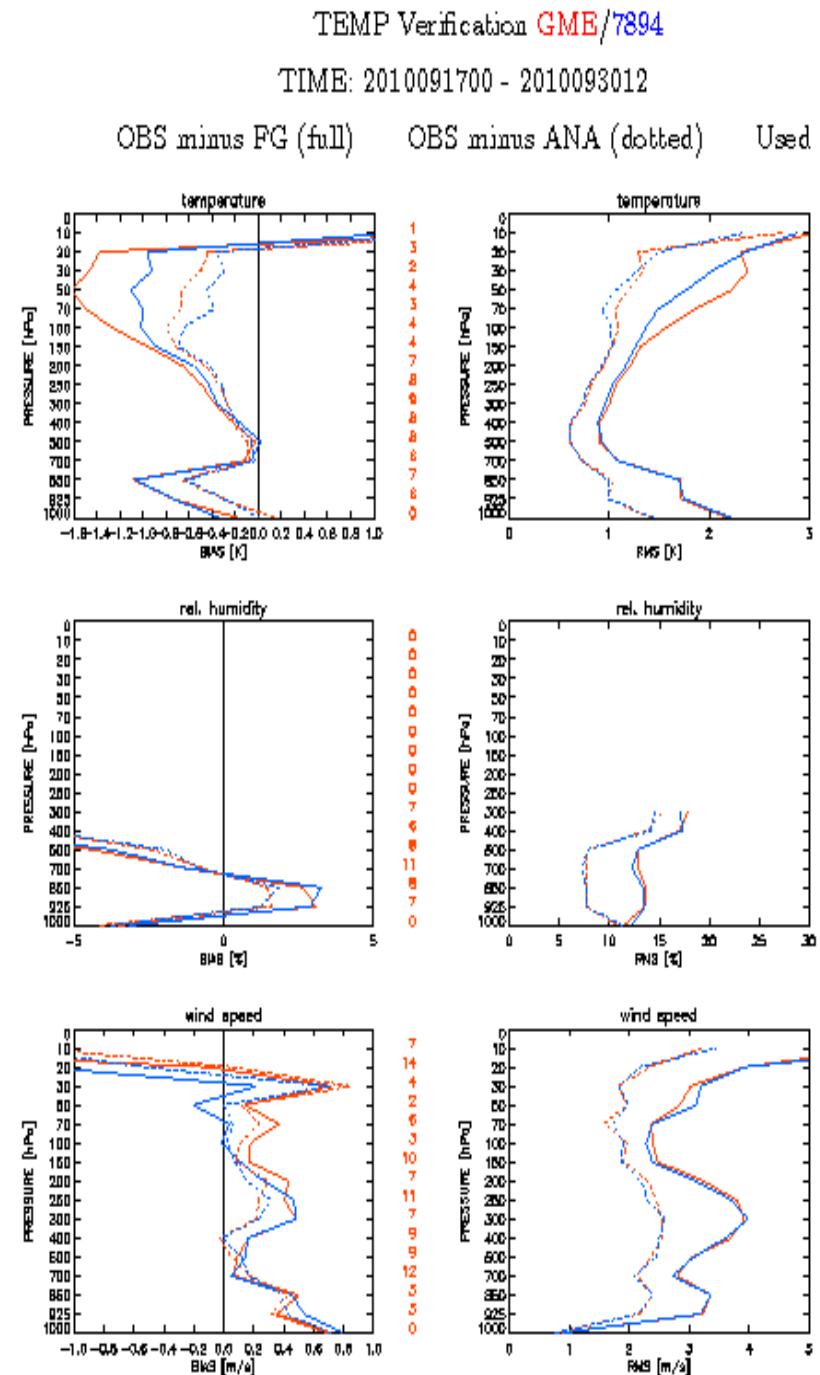

Radiosonde Verification

- Bias (left); RMS (right)
- Antarctic region
- Comparison of Routine (red) against Experiment using stratospheric balloon measurements (blue)

Results:

Temperature- and Windspeed bias reduced over Antarctica in the lower stratosphere

RMS of temperature is reduced considerably for both, OBS minus FG and OBS minus Ana

OSE at Météo-France: impact of both dropsonde and gondola information over 7 weeks

Significant impact in reduction of RMS(O-G)
wrt radiosondes over Antarctica

	Without	With
U 200hPa (m/s)	2.53	2.47
V 200 hPa	2.60	2.53
U 250 hPa	2.87	2.75
V 250 hPa	2.73	2.67
T 500 hPa (K)	1.03	1.01

Concluding remarks

Over the Southern polar area, large uncertainty in a ring 45-70S

Large impact of satellite data: AMSU-A, IASI and AIRS, GPS-RO

Non-negligible impact of conventional data

In some systems, large impact of AMSU-B/MHS over sea-ice,
large impact of MODIS winds

Potential large benefit of using IASI data down to surface
over Antarctica

Concluding remarks

Both Concordiasi dropsonde and gondola information have a positive impact on forecast performance

Dropsondes have a larger impact at high latitudes (inside Antarctic continent)

Large impact of wind observations at high levels, of temperature information at lower levels
