

OPERATIONAL NEWSLETTER

VOLUME 1997

No. 1/2 - JANUARY/FEBRUARY 1997

WORLD METEOROLOGICAL ORGANIZATION
GENEVA
SWITZERLAND

The WMO Secretariat would like to express its appreciation to all those who have contributed material to the “Operational Newsletter”. ■

EDITORIAL

The Operational Newsletter on the World Weather Watch (WWW) and Marine Meteorological Services (MMS) has been issued since 1982 at the request of the Commission for Basic Systems. It is distributed by the WMO Secretariat and is aimed at providing WWW Centres with a summary of the latest operational information on:

- The Global Observing System
- The Global Telecommunication System
- The Global Data-Processing System
- Codes
- Marine Meteorological Services

A feedback form is included in the Newsletter to assist WMO Members in reporting changes in the present status of implementation of observing programmes of SYNOP, TEMP and PILOT reporting stations.

Your co-operation in ensuring that the above information reaches the appropriate operational units of your service is greatly appreciated.

In addition to the printed version which is distributed by mail, the Operational Newsletter is also available at the following locations:

For access via FTP:

<ftp://WWW.WMO.CH/wmo-ddbs/Newsltrxxxx.html>

For access via html:

<http://WWW.WMO.CH/web/www/Newsltrxxxx.html>

(xxxx indicates the year/month (eg. 9701))

PLEASE check our World Weather Watch home page for the most recent edition.

The file is created in Adobe Acrobat PDF format so that users can easily download, view or print the document from different computer platforms, keeping the page layout and typography of the original document intact.

To view the Newsletter you will require "Adobe Acrobat Reader", which can be downloaded from:

<http://www.adobe.com/Acrobat/readstep.html>

We apologize to those readers who may have experienced difficulties with our electronic version of the 11/12 1996 Newsletter produced in .html. You may be pleased to know that this was done on a trial basis. This year we hope to keep to our standard format of .pdf.

Comments are more than welcome. Should you have any difficulties downloading, viewing or printing the Newsletter ... Our e-mail address is as follows:

PWOI@WWW.WMO.CH

We look forward to hearing from you.

Rising costs demand that we scale down the distribution of the Newsletter by letter mail, so we strongly encourage our readers to help us become more cost-effective by using our new on-line service.

(1) The elevation H/HA has not been furnished

(2) Station operated by US Department of Energy's Atmospheric Radiation Measurement Program. There will be three to five Intensive Operational Periods (IOP) per year, with a duration of 3 to 5 weeks each. During the IOPs, all sites will launch on a 3-hour schedule, 7 days per week. All sites use Vaisala RS-80 sondes.

(3) Station operated by Antarctic Support Associates for US National Science Foundation. The observations will be relayed through Service ARGOS in Landover, Maryland, and entered onto the GTS through the RTH Washington.

NOTIFICATION FROM AUSTRALIA

Upper-air flights

94865 - Laverton Aerodrome and 94867 - Glenlitta Avenue

Due to upgrading work on the wind finding radar at Laverton Aerodrome, radiosonde and radar upper wind flights will cease for approximately three weeks, commencing 17 February 1997.

To ensure that data is available, the Autosonde system will be trialled during this period at the Bureau of Meteorology Training Annex (Glenlitta Avenue) 94867. The Autosonde will be scheduled to release at 00 UTC and 12 UTC daily with occasional flights at 17 UTC.

Site details:

Index No.:	94867
Station Name:	Bureau of Meteorology Training Centre Annex (Glenlitta Avenue)
Latitude:	37 41 29 S
Longitude:	144 57 32 E
HP:	110 m
H/HA:	108m
Program:	00 UTC and 12 UTC Upper Temp and Upper Wind daily
Message Format:	The Autosonde reports in international combined wind temp format
Date:	From 17 February 1997 to 03 March 1997 (approximately)

MOBILE SEA STATIONS AUTOMATED SHIPBOARD AEROLOGICAL PROGRAMME (ASAP)

NOTIFICATION FROM ASAP COORDINATING COMMITTEE

The Danish ASAP OXVH2 is temporarily replaced by OXTS2, which will operate as an ASAP until the middle of April 1997. The OXVH2 is expected to start operating again in the middle of May 1997. The launch height on the OXTS2 is 10 m, and the data are communicated via Inmarsat-C.

FEED-BACK FROM MEMBERS TO THE SECRETARIAT ON ANY CHANGES IN THE OBSERVING NETWORK

In view of the difficulties experienced in identifying non-implemented observing stations or implemented stations which are closed or suspended for a certain period, or stations making observations that do not reach their NMCs, a special table accompanied by explanatory notes is included in this Newsletter. The table will serve as feed-back from Members to the Secretariat on any changes of the present state of implementation of observing programmes of SYNOP, TEMP and PILOT reporting stations.

Members are urged to fill in the special table as and when appropriate, and to return it to the Secretariat before the 20th of each month to enable changes to be included in the next "OPERATIONAL NEWSLETTER".

EXPLANATORY NOTES

Separate tables should be prepared for global exchange and regional exchange respectively. These tables should contain information concerning any changes of the present state of implementation of observing programmes of SYNOP, TEMP and PILOT reporting stations for Volume A, the Catalogue of Meteorological Bulletins, and particularly for stations included in the Regional Basic Synoptic Networks (RBSN).

For entries in these tables, the following should be taken into account:

COLUMN A: The station index number (IIii) and station name;

COLUMN B: Latitude and Longitude in degrees and minutes with the appropriate letters (N, S, E and W);

COLUMN C: The TTAAii CCCC of the abbreviated headings of the meteorological bulletins which contain reports from the station should be inserted;

COLUMN D: "X" for implementation and "-" for non-implementation should be inserted as appropriate. In order to easily identify changes in the programme, these should be marked in red;

COLUMN E: HP = Elevation of the station in metres (the datum level to which barometric pressure reports at the station refer);

H = Elevation of the ground, in metres, (average level of terrain in immediate vicinity of station), for stations not located on aerodromes;

HA = Official altitude of the aerodrome given for stations located on aerodromes is indicated by the letter "A" in the column "Other observations and Remarks" of Volume A;

COLUMN F: For those stations not indicating pressure reduced to mean sea level (group 4PPPP) in their synoptic reports, the entry in this column shows which information is reported in lieu of group 4PPPP (see table 1):

STATION	Pressure at station level reported using group 3P _o P _o P _o P _o
1000 hPa	
850 hPa	geopotential of the given standard isobaric surface
700 hPa	reported using group 4a ₃ hhh
500 hPa	

Table 1

COLUMN G: Reasons for temporary suspension of observing programmes and an expected date of resumption of the programmes should be given as far as possible. Non-standard collection and/or distribution times should also be included, and also possible alternate observing stations, as appropriate.

These tables should be sent to the
Secretariat
BEFORE the 20th of the month
for inclusion in the
"OPERATIONAL NEWSLETTER",
as appropriate.

FOR YOUR INFORMATION

Please note that a complete listing of moored/drifting buoys will be provided bi-annually, in May/June and November/December. All other issues will contain an updated listing showing changes. For the drifters this would be buoys which ceased to operate or new deployments; for the moorings this would be buoys which were withdrawn or redeployed to new locations.

KEY: Observed or Technical Parameters			
Column	Parameters	Column	Parameters
1	Wind direction, speed and peak wind	11	Visibility
2	Air temperature	-	Parameter not observed
3	Air pressure	X	Buoy observes this parameter
4	Pressure tendency	.	Data under evaluation, not reported
5	Sea-surface temperature		
6	Wave period and height	B	Buoy beached, sensor reporting
7	Wave spectra	N	No sensor installed
8	Drogued	Q	Data questionable, but reported
9	Subsurface temperatures	R	Buoy Retrieved
10	Relative humidity	S	Sensor/system failure

46632 stopped transmitting during December

46682 stopped transmitting beginning of January

46707 New buoy deployed December

United States of America

List of U.S.A. Ocean Data Acquisition Systems (ODAS) included in the **January 1997** Data Platform Status Report of the Data Buoy Centre of the National Oceanic and Atmospheric Administration (NOAA). Data from moored buoys and platforms are collected by geostationary meteorological satellites and reports are distributed on the GTS in SHIP code. Data from drifting buoys are collected by the ARGOS system and distributed on the GTS in DRIFTER CODE.

ARGOS SERVICE**ARGOS
Monthly Status Report**

Date of statistics computation:
9 January 1997

- Reports handled by ARGOS Service
(list of monthly collected ARGOS platforms sorted by type of platform)

Drifting Buoys	1192
Boats (<20 knots)	-
Marine Stations	159
Moored Buoys	305
Fixed Stations	499
Marine Animals	138
Terrestrial Animals	59
Birds	79
Balloons	3
TOTAL:	2434

- Reports inserted into the GTS
(list of monthly collected ARGOS platforms on indicated GTS sites sorted by type of platform)

Inserted by RTH Toulouse:

Drifting Buoys	92
Fixed Stations	20
Moored Buoys	6
XBT Ships	-

Inserted by RTH/WMC Washington:

Drifting Buoys	657
Fixed Stations	40
Moored Buoys	58
XBT Ships	-

- Coding statistics of platforms reporting through ARGOS and distributed over the GTS:

BATHY	382
BUOY	214990
SHIP:	473
SYNOP:	34245
TOTAL:	250090

Date effective: 9/12/1996

Compiling or Editing Centre in Region VI: Offenbach (EUMETSAT, DARMSTADT)

- The headings of the Antarctic upper air bulletins for the distribution of stations:
89002, 89022 and 89532 will be changed.

- Following the request from Japan the following changes will be included in Volume C1:
Insert station:
 89532 (Antarctic Station SYOWA) into the bulletins: CSAA01 EUMS and CUAA01 EUMS
Delete Station:
 89524 (Antarctic Station ASUKA) from the content of bulletins: SMAA01 EUMS and SIAA21 EUMS.

OPERATION OF THE GTS
Routeing catalogues

The routeing catalogue of RTH Tokyo is available via Internet on the FTP server of the Japan Meteorological Service:

ddb.kishou.go.jp

In accordance with the formats given in Annex II of the Abridged Final Report of the tenth session of CBS, the routeing catalogue consists of two files named RJTDCIRC and RJTDROUT included in the sub-directory:

pub/RoutingCatalog.

**IMPLEMENTATION OF THE
GTS**

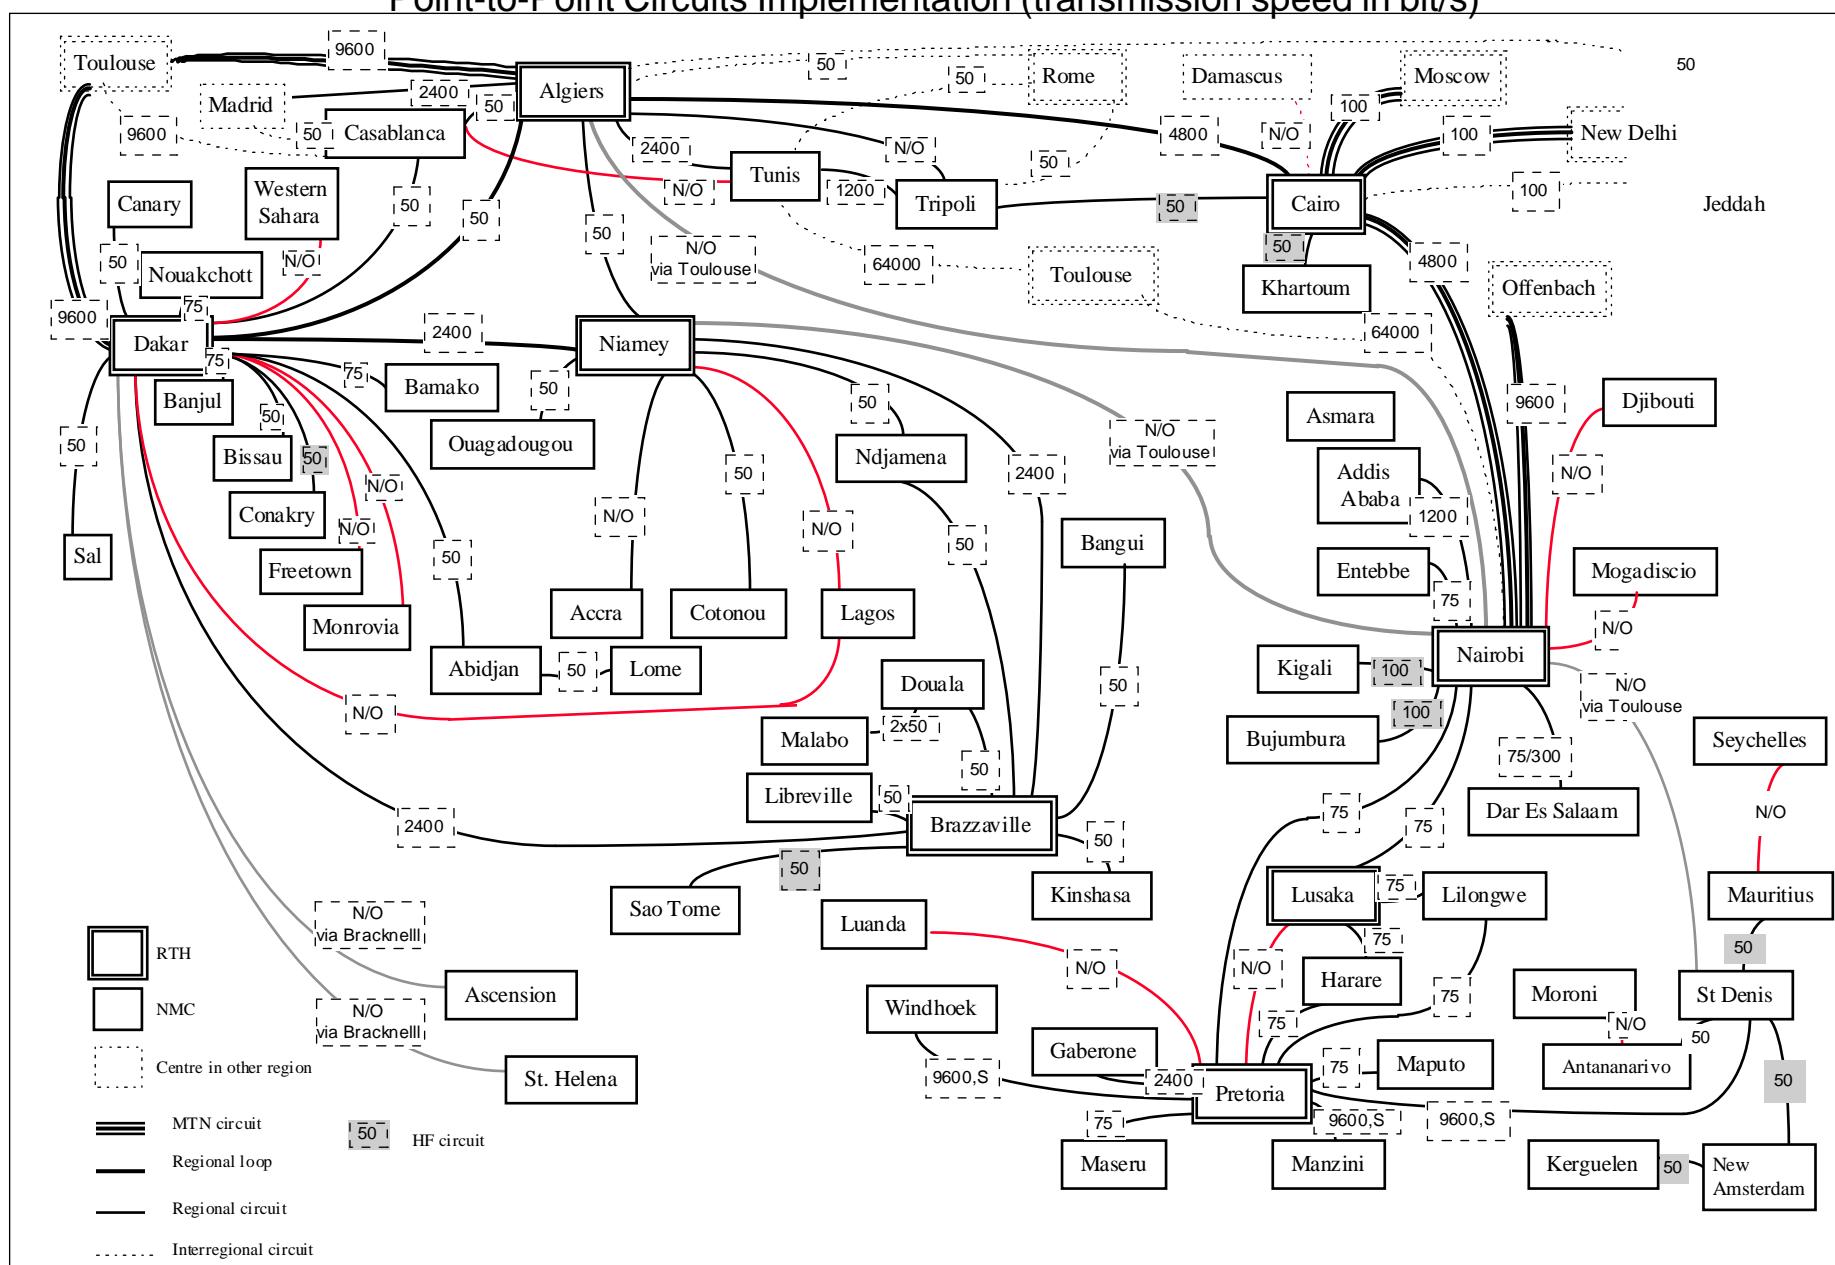

**REGIONAL METEOROLOGICAL
TELECOMMUNICATION NETWORK**

The diagrams that follow provide updated information on the implementation of the GTS for Regions I to VI. Please note that the indicated transmission speed gives the total capacity of the circuit.

Members are invited to notify the Secretariat of any error or changes of the status of implementation of the GTS as reflected in the attached diagrams.

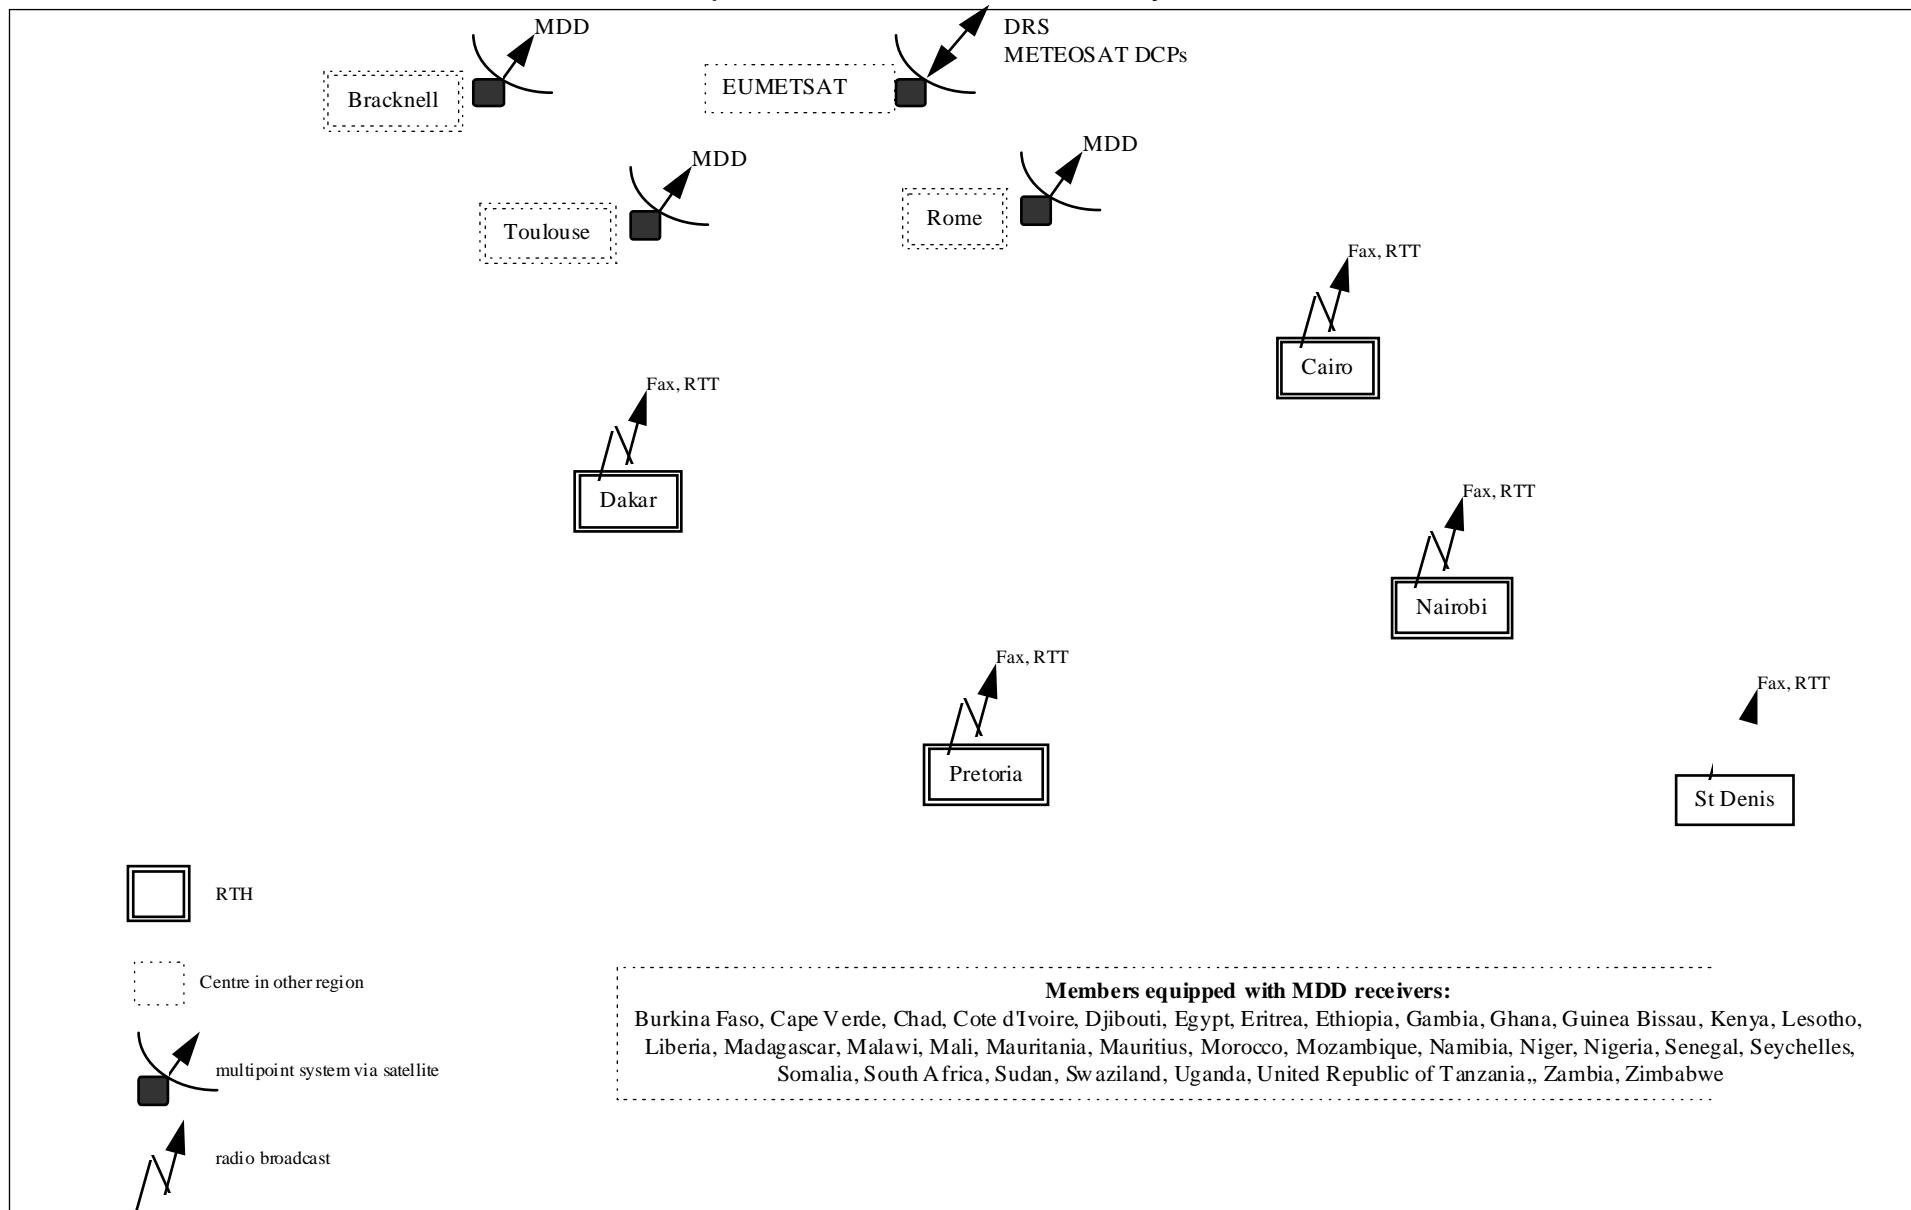

REGION I (AFRICA)

Point-to-Point Circuits Implementation (transmission speed in bit/s)

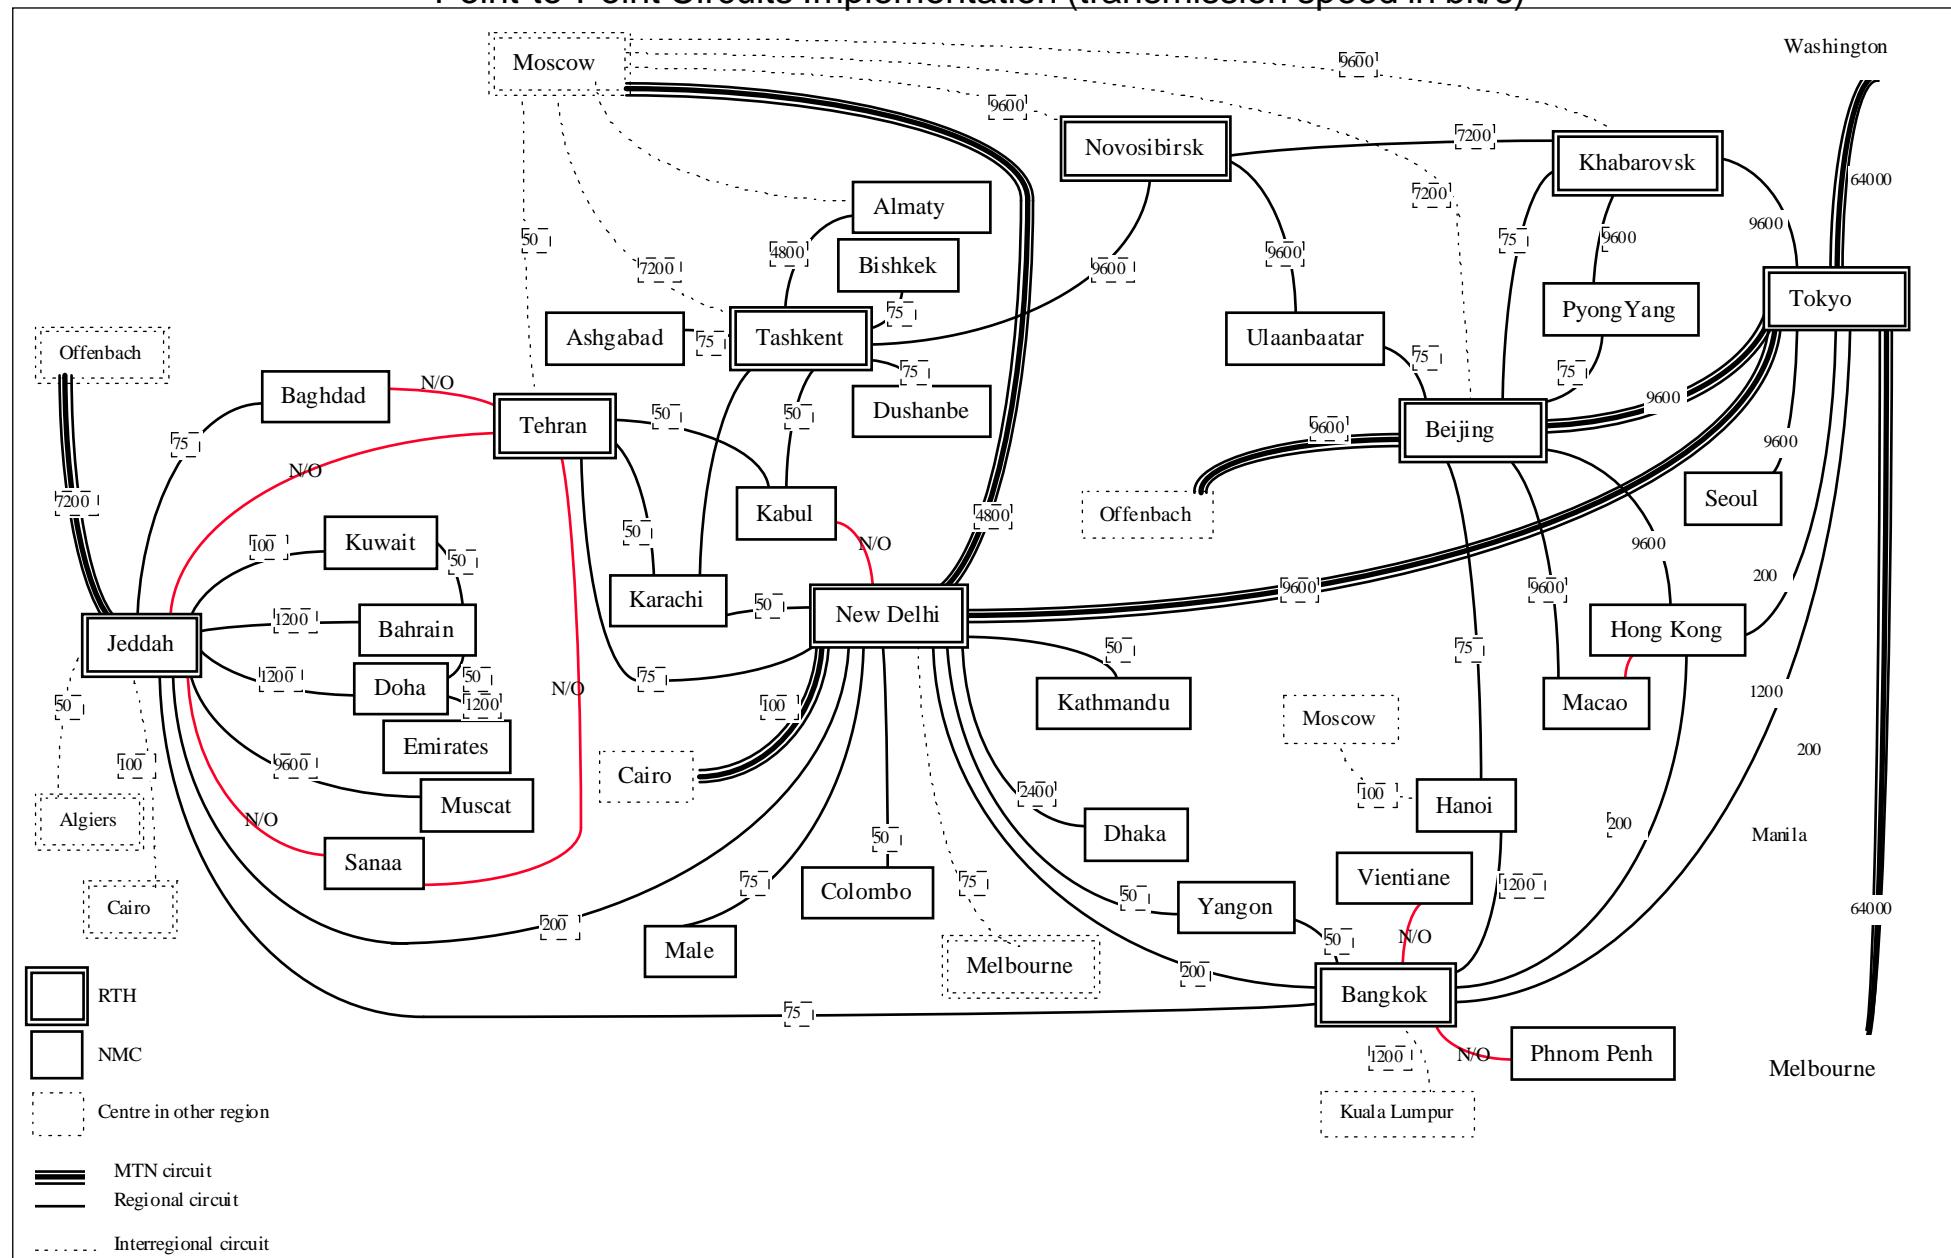

REGION I (AFRICA)

Multipoint Telecommunication Systems

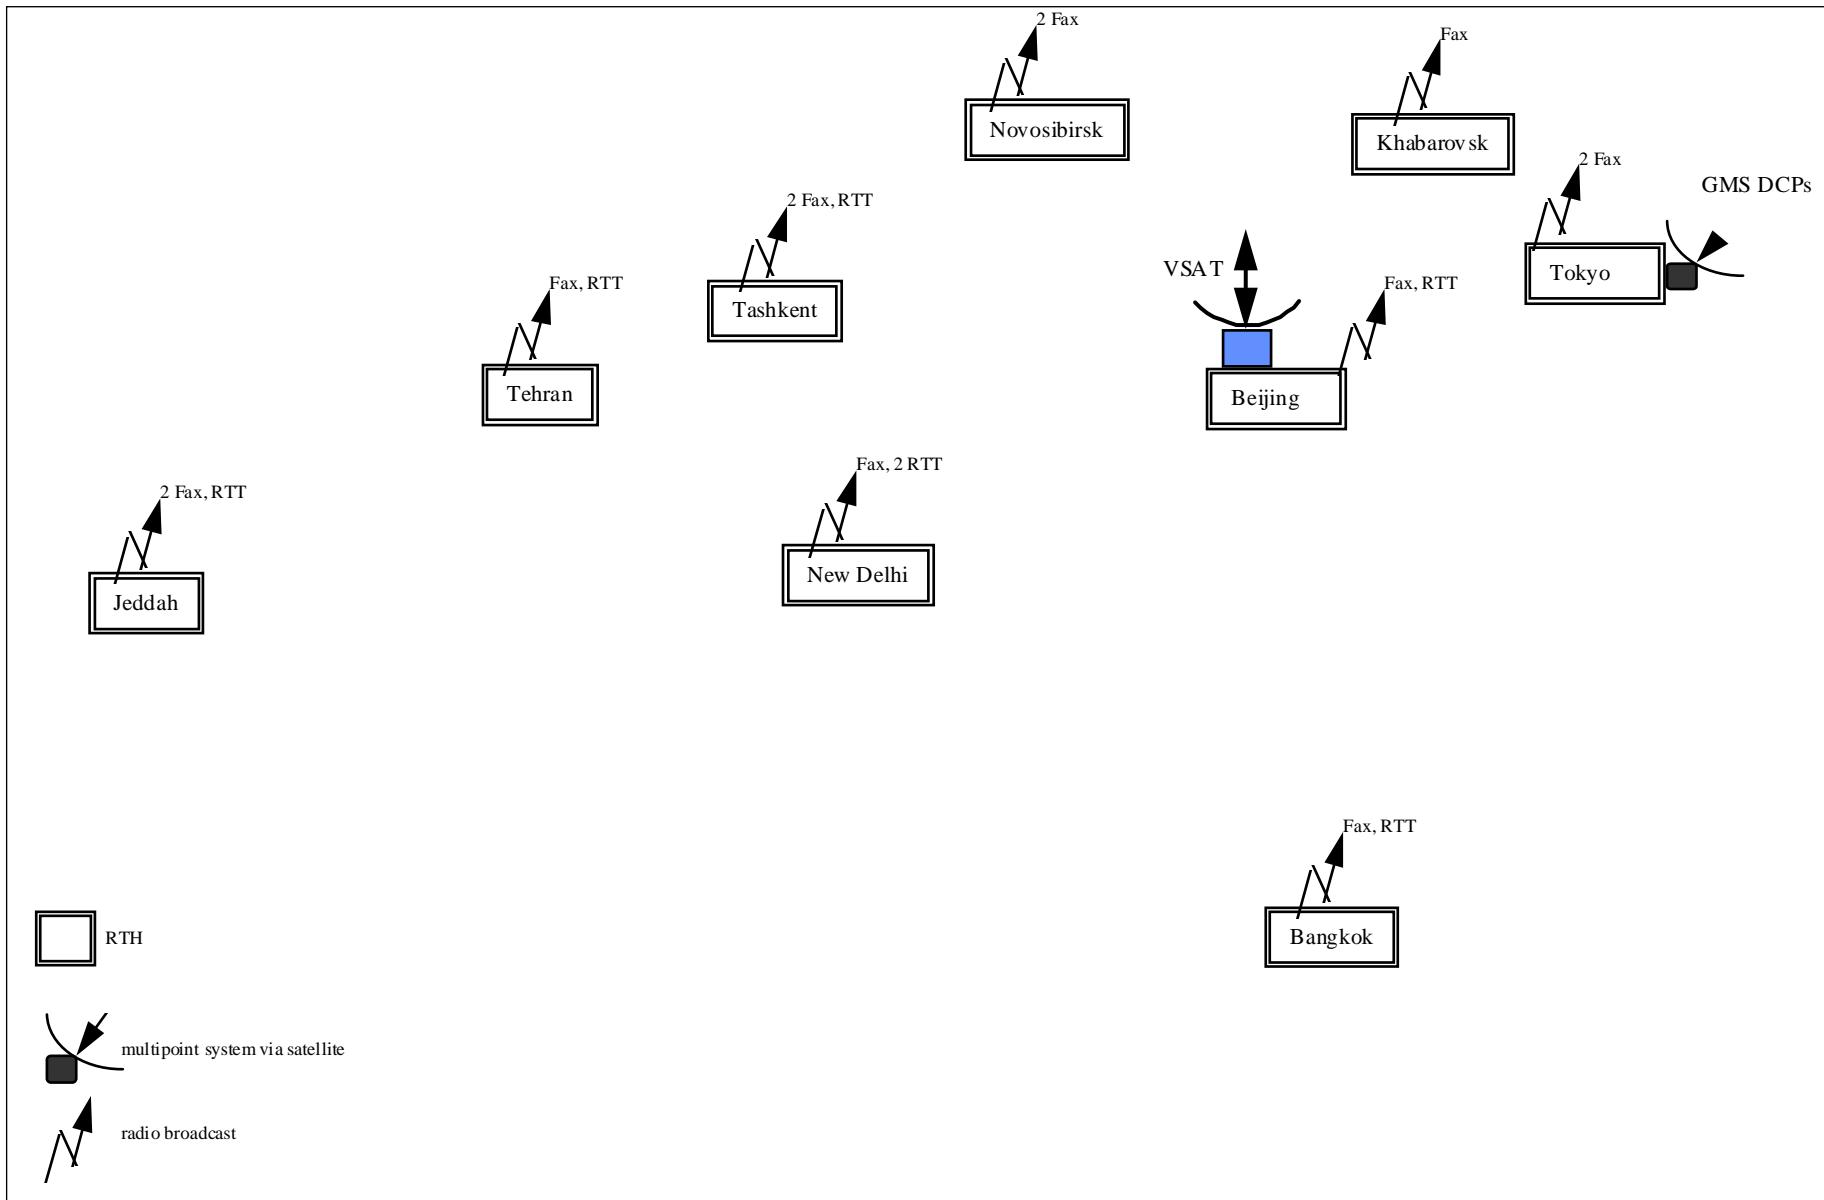

REGION II (ASIA)

Point-to-Point Circuits Implementation (transmission speed in bit/s)

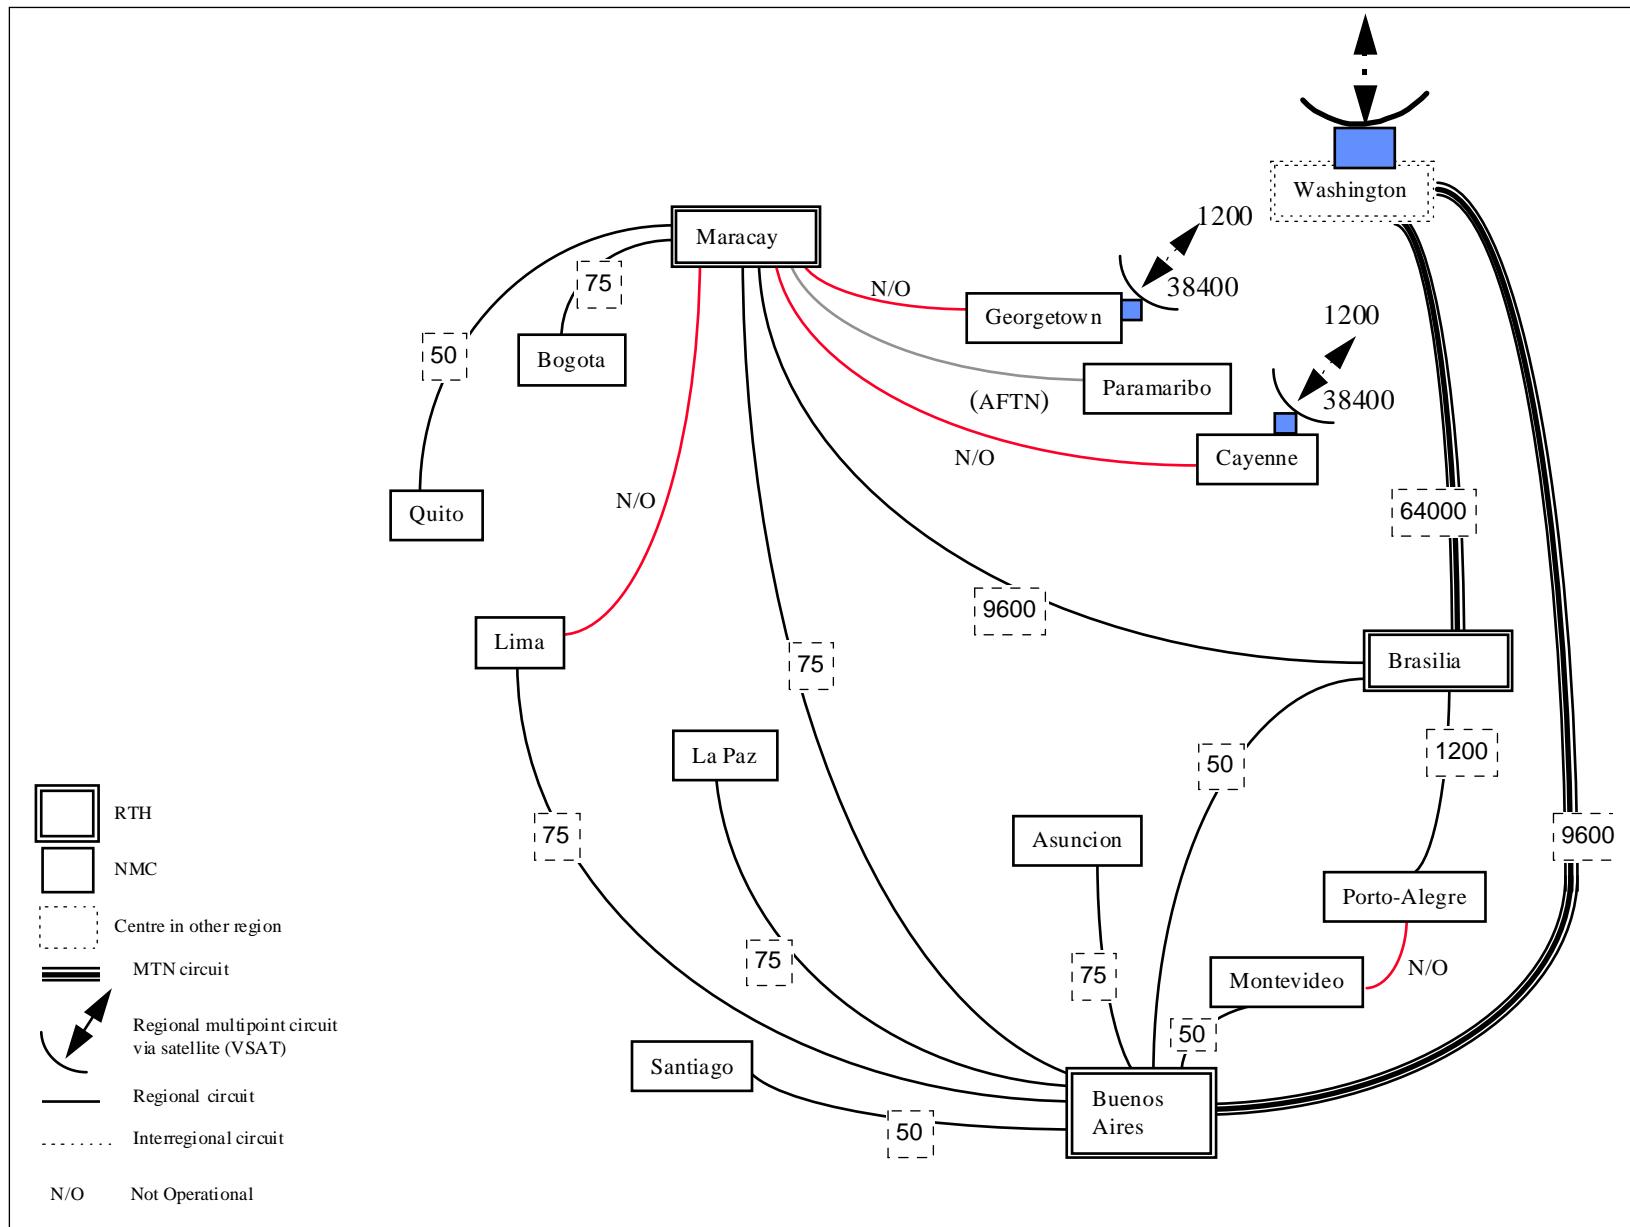

REGION II (ASIA)

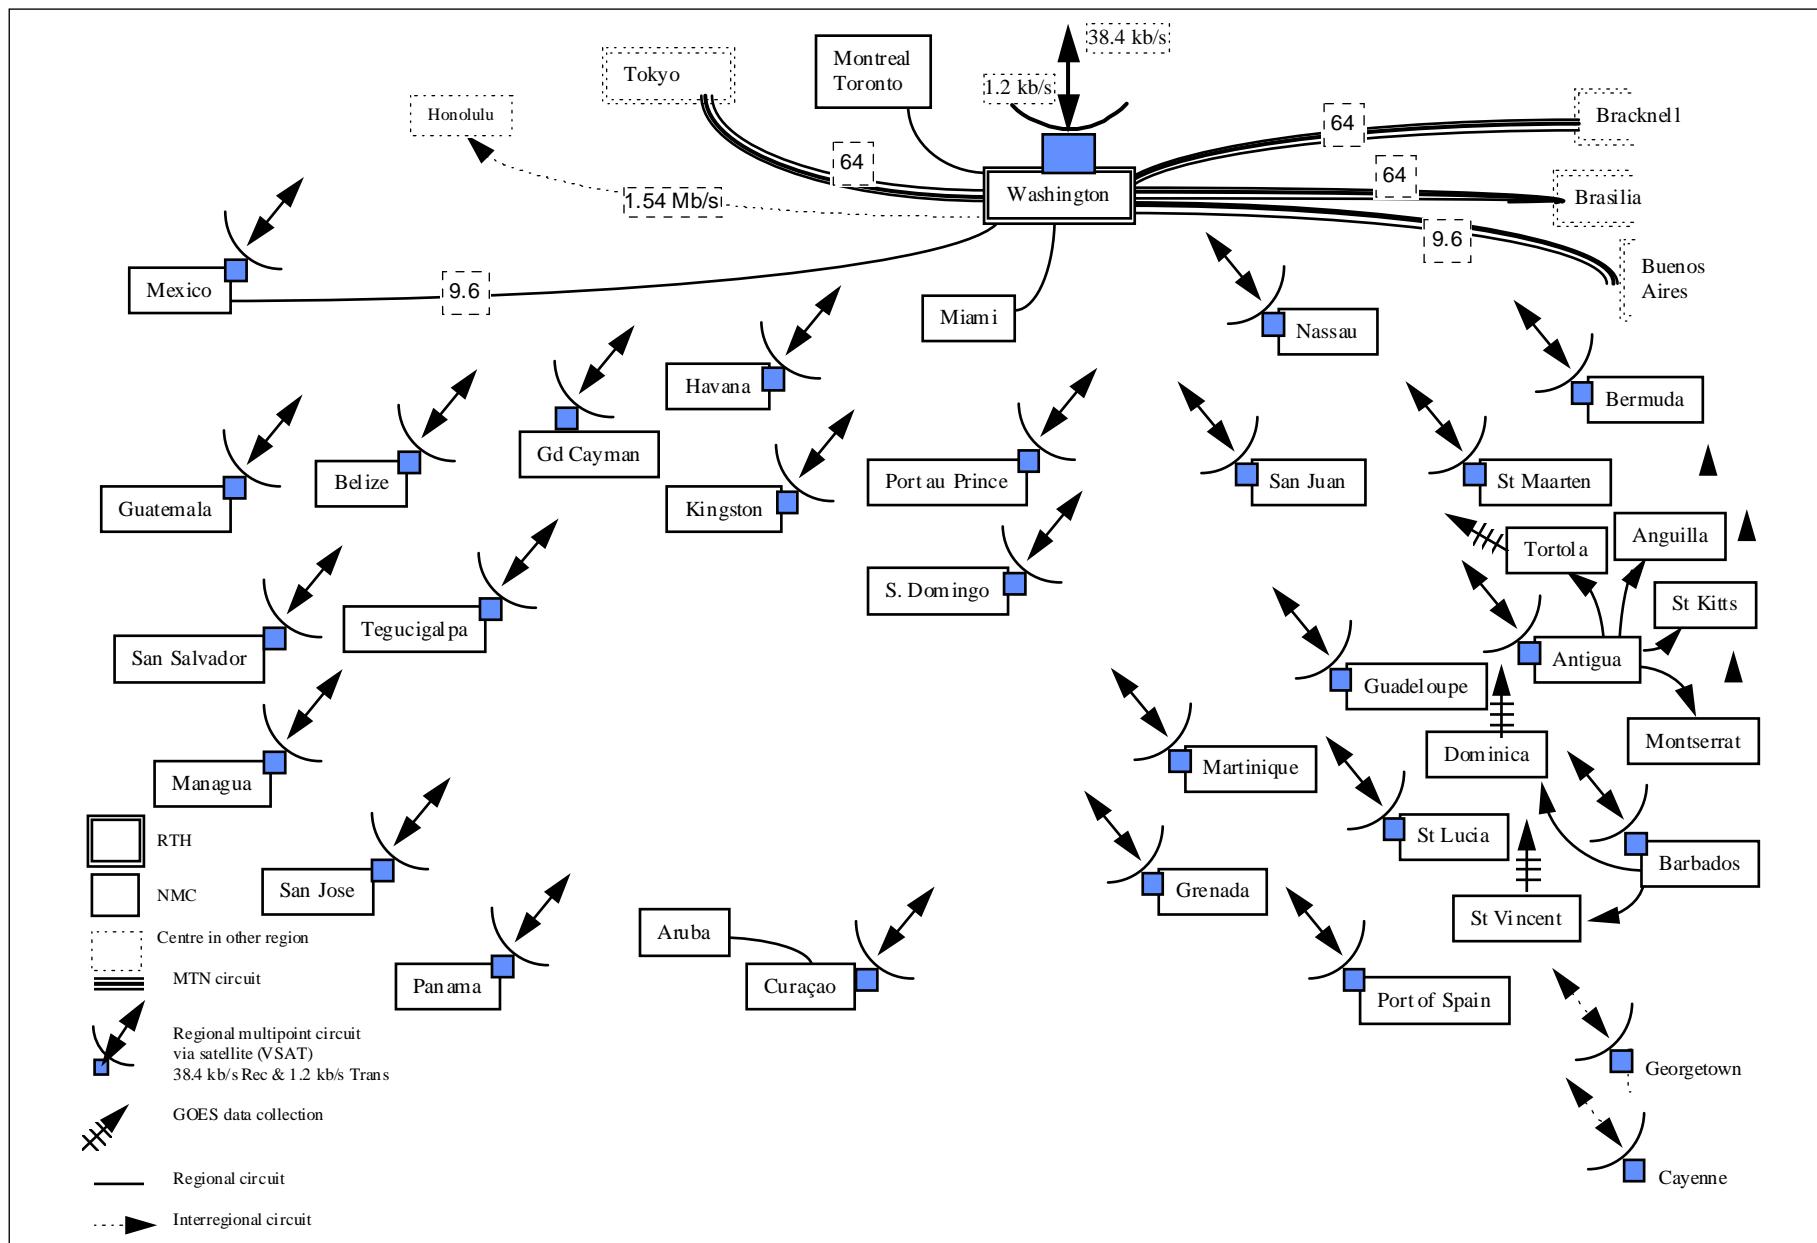

Multipoint Telecommunication Systems

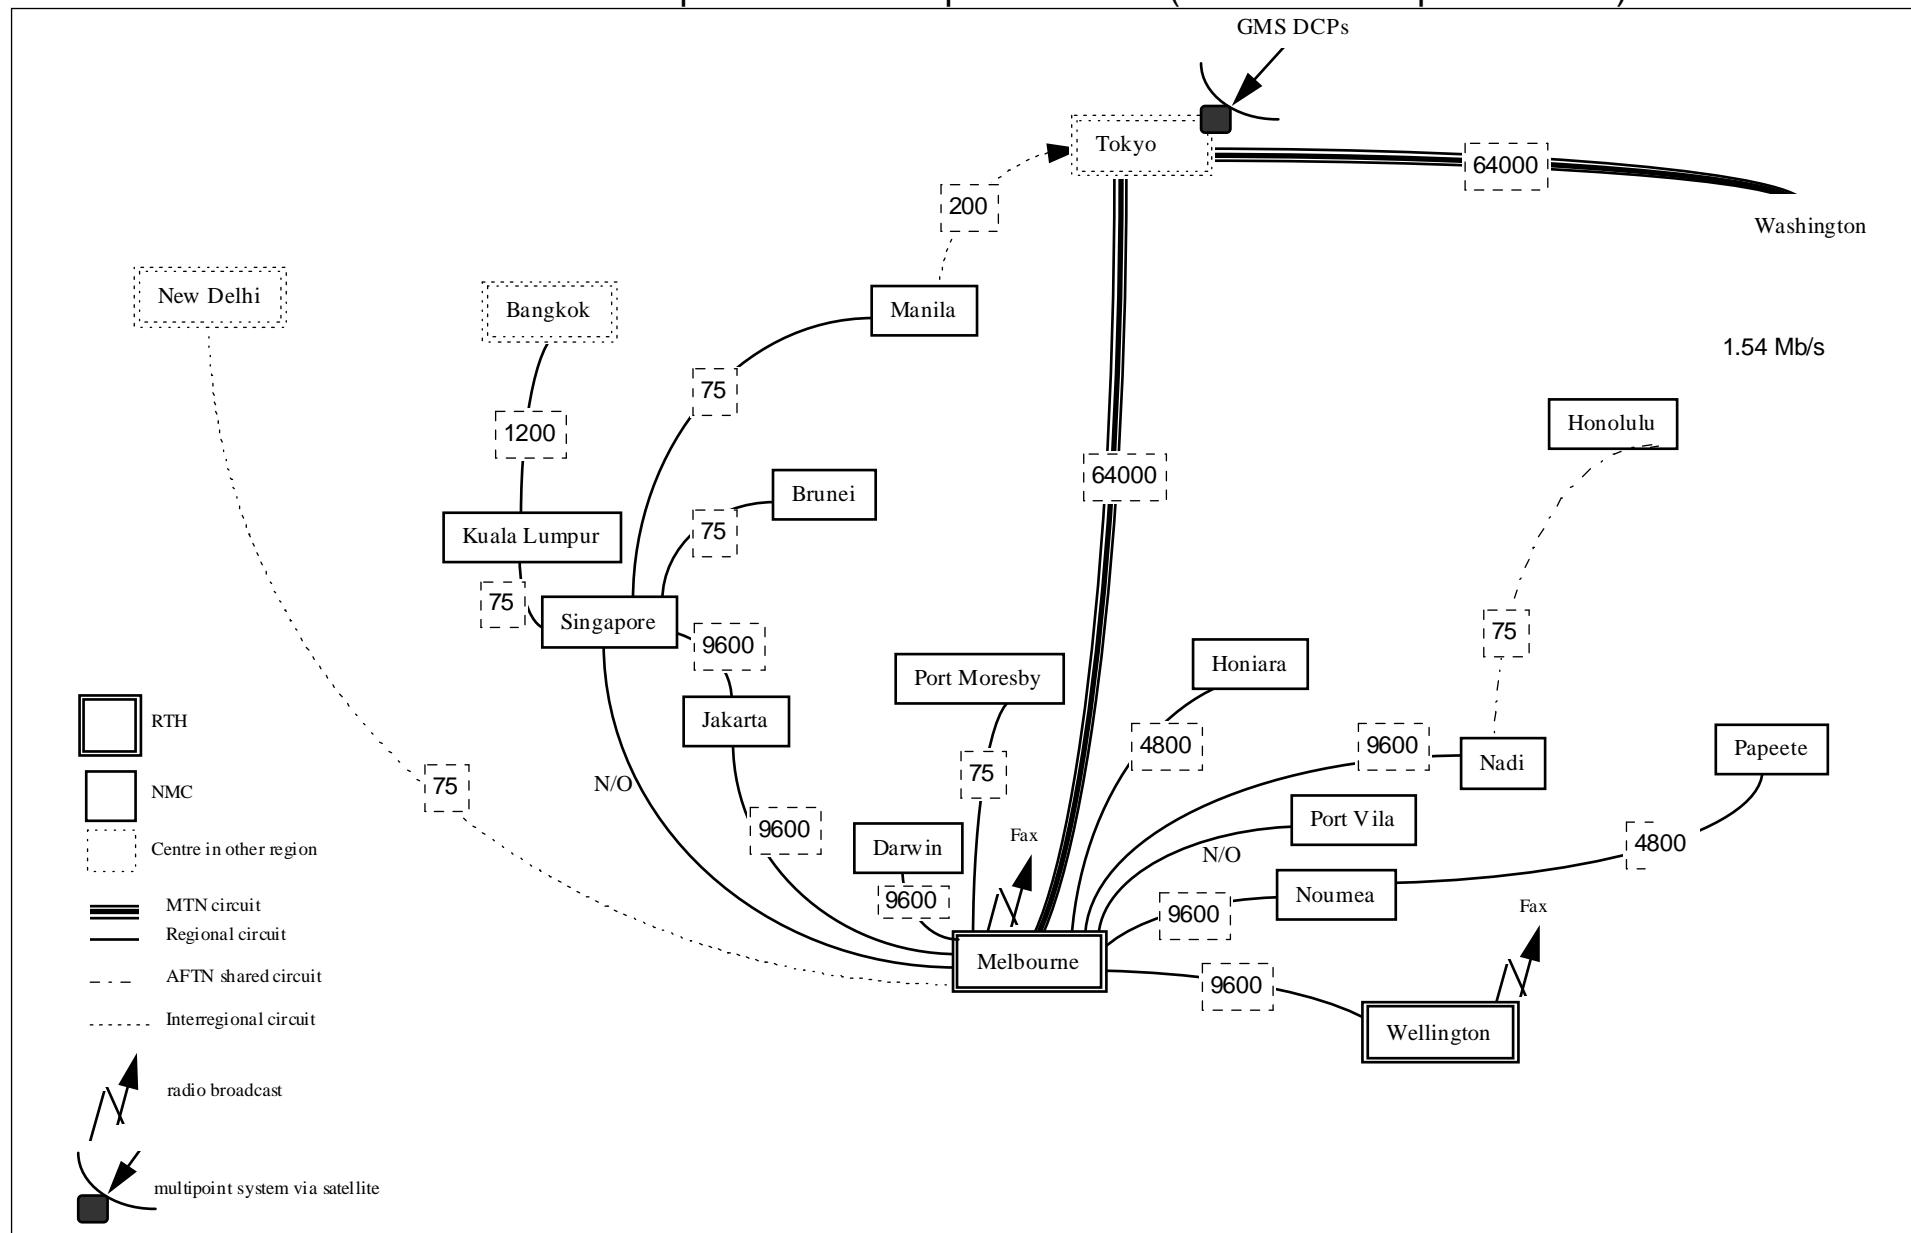

REGION III (SOUTH AMERICA)
Point-to-Point and Multipoint Circuits Implementation (transmission speed in bit/s)

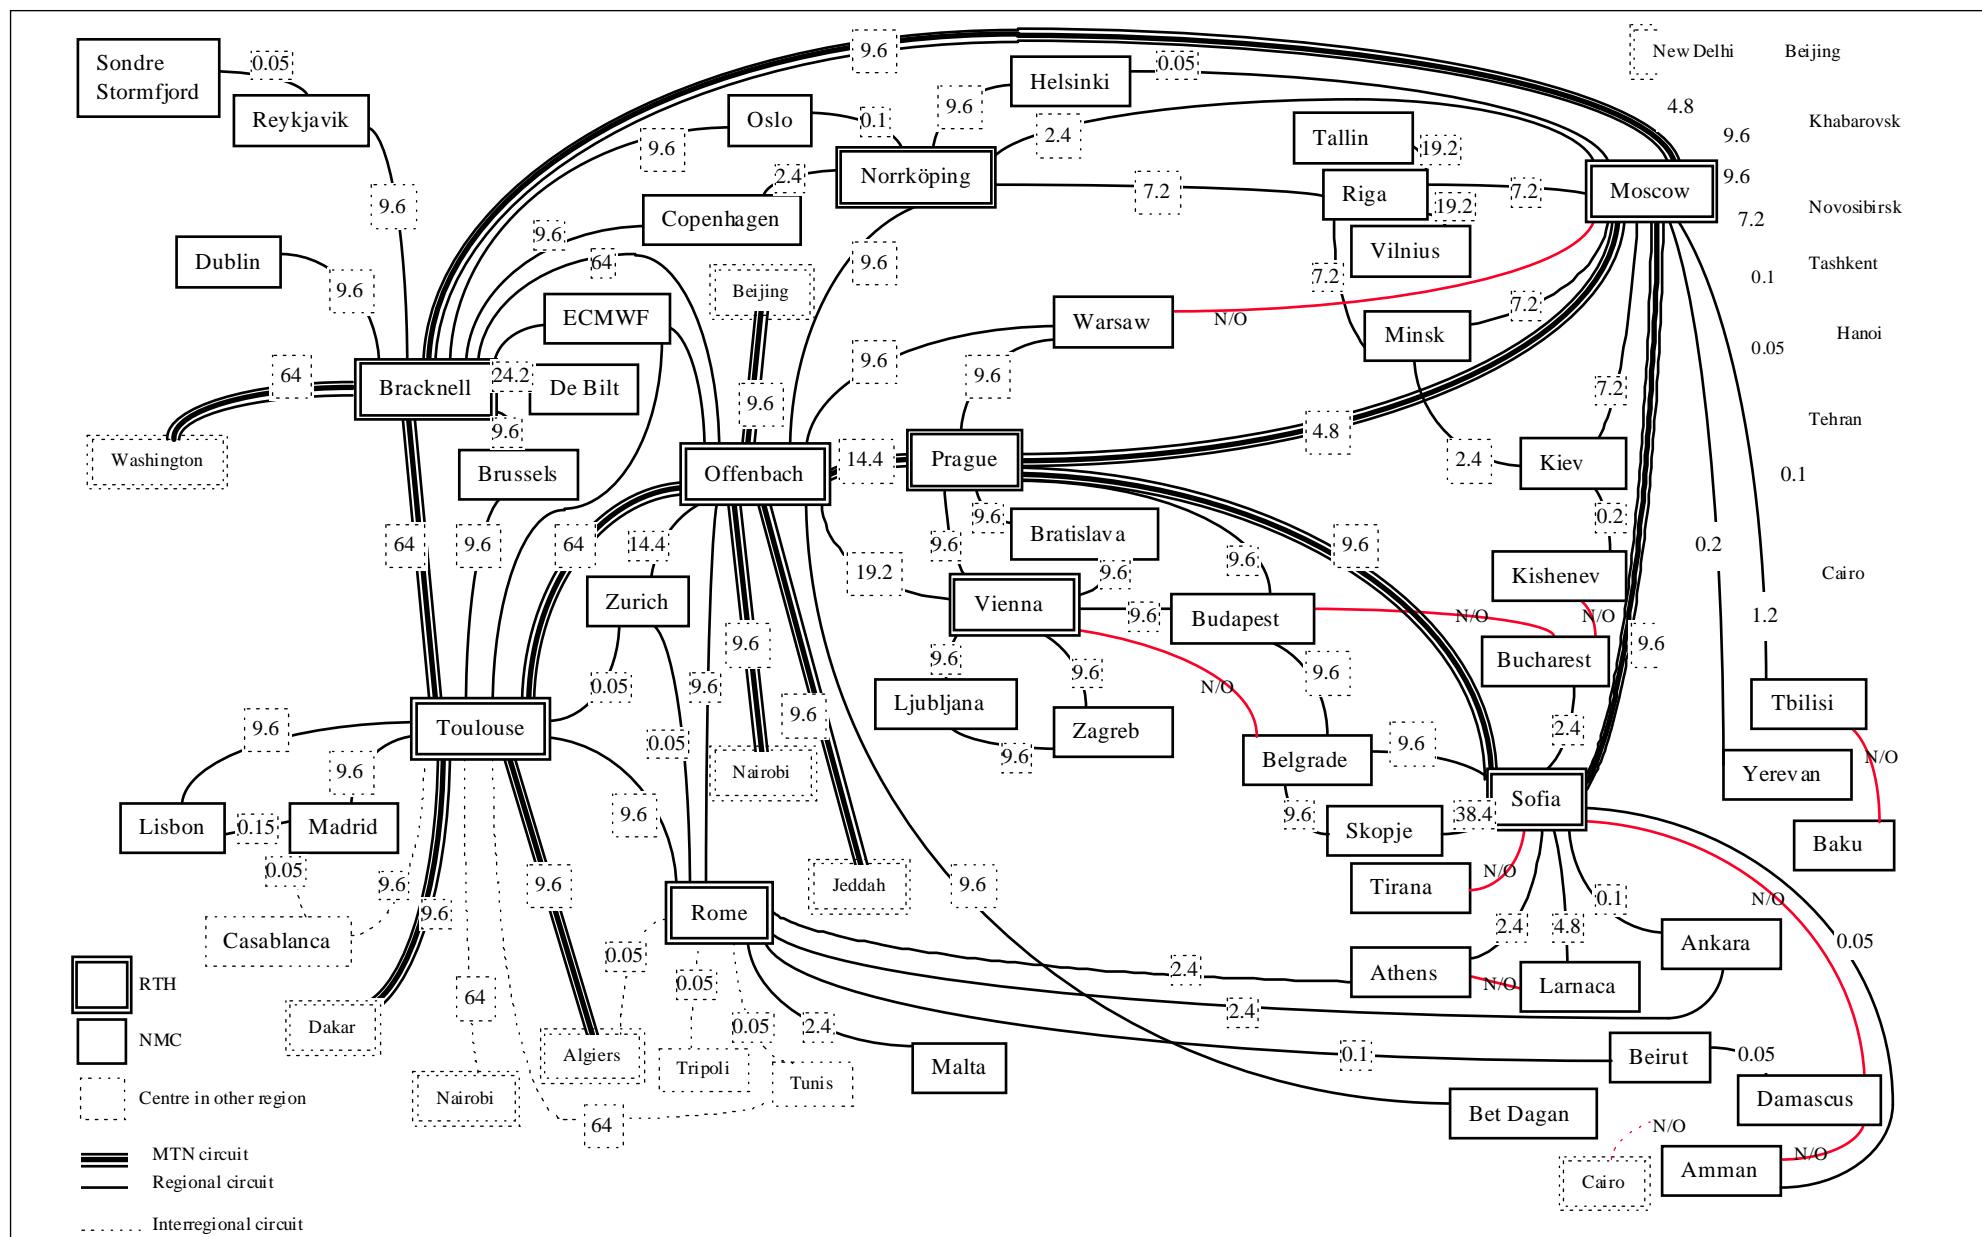

REGION IV (NORTH AND CENTRAL AMERICA)
Point-to-Point and Multipoint Circuits Implementation (transmission speed in kilobit/s)

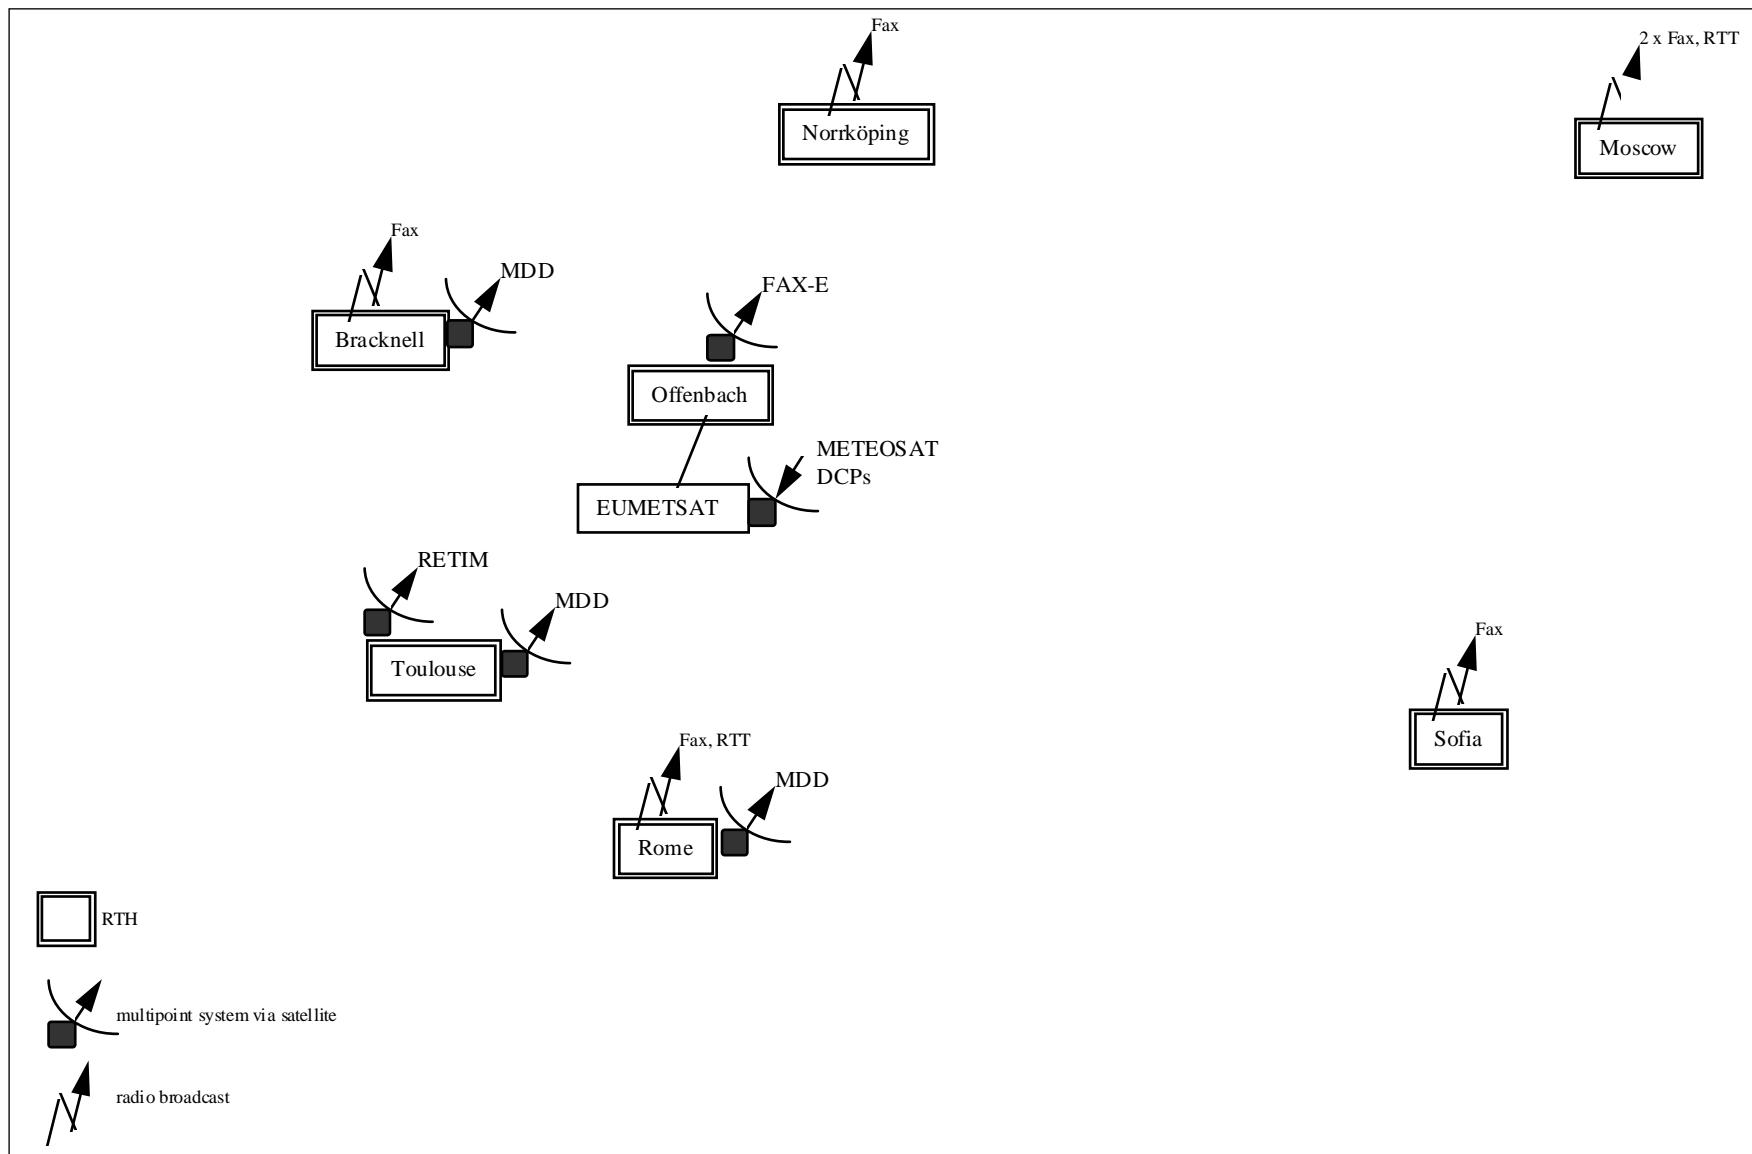

REGION V (SOUTH-WEST PACIFIC)
Point-to-Point and Multipoint Circuits Implementation (transmission speed in bit/s)

REGION VI (EUROPE)
Point-to-Point circuits implementation (transmission speed in kilobit/s)

REGION VI (EUROPE) Multipoint Telecommunication Systems

IV. CODES

MANUAL ON CODES

NATIONAL PRACTICES CHANGES TO CODES OR PROCEDURES NOTIFICATION FROM CANADA

The text for Canada on pages II-4-E-2 to II-4-E-2c (the page number is related to the English version) should be replaced with the following text:

Region IV

E — NATIONAL CODING PROCEDURES WITH REGARD TO INTERNATIONAL CODE FORMS:

FM 15-X Ext. METAR and FM 16-IX Ext. SPECI
replace text for CANADA as below:

SECTION	GROUP	COMMENTS
15.1.1	METAR or SPECI	METAR or SPECI shall appear as the first word of each report.
15.4		Groups not reported shall be omitted. Solidi shall only be used for missing wind speed and/or direction.
New Group	(BBB)	The BBB format may appear immediately preceding the wind group to indicate if the report has been corrected.
15.5	dddffGf _m f _m KT	The averaging period for mean wind speed and direction is two minutes. Speed is reported in nautical miles per hour.
15.5.2	dddffGf _m f _m KT	The term VRB shall not be used.
15.5.3	d _n d _n d _n Vd _x d _x d _x	This group shall not be reported by AUTO stations.
15.6	VVVVD _V	Prevailing visibility is reported in statute miles and fractions up to 3 miles, then in whole miles up to 15 miles, and in units of 5 miles thereafter, where suitable visibility markers are available. Automatic weather stations report sensor visibility in statute miles and fractions up to 4 miles, then in whole miles up to a maximum of 9 miles. Statute miles and fractions of statute miles shall be encoded with a space; for example, 11/8 statute mile shall be reported as 1 1/8SM. D _V is not reported, but sector visibilities half (or less) of prevailing visibility are reported in supplementary information (manned sites only). The letters SM (statute miles) are appended, without a space, to each observation to identify the units.
15.6.3	V _X V _X V _X V _X D _V	The group V _X V _X V _X V _X D _V is not used.
15.7.1	RD _R D _R /V _R V _R V _R V _R i	RVR is reported whenever the prevailing visibility is one statute mile or less and/or the RVR is 6000 feet or less. The units of measurement are feet and the abbreviation FT will be included in each message according to the following symbolic format: RD _R D _R /V _R V _R V _R FT/i. When the one minute mean minimum and maximum values are reported, FT/i follows the maximum value without a space. RVR is not used as one of the criteria for reporting a SPECI. RVR is not reported by AUTO stations. RVR may not be reported at some aerodromes.
15.8.1	w'w'	The following weather phenomena/qualifiers will not be reported by automatic weather stations: FC, IC, PE, SG, GS, BR, FG, FU, VA, SA, HZ, SS, DS, TS, MI, BC, PR, DR, BL, SH, VC, PO. AUTO stations will only report one group at a time, otherwise more than three w'w' groups may be reported.

SECTION	GROUP	COMMENTS
15.8.6	w'w'	The term +FC will be used to report any tornado or waterspout when within sight. The term FC will be used to report any funnel cloud when within sight. The symbol UP with appropriate intensity shall be used to describe unknown precipitation reported from an automatic weather station.
15.8.6	w'w'	Precipitation preceded by the descriptor FZ shall always appear as a separate group with its own intensity.
15.8.8	w'w'	Thunderstorms are reported when thunder is heard or if overhead lightning or hail occurs within the 15 minute period preceding the time of the report.
15.8.10	w'w'	The terms VCFC and VCTS shall not be used in Canada. Automatic weather stations cannot report the qualifier VC.
15.8.12	w'w'	Occurrences of IC (diamond dust) are reported whenever visibility is reduced to 6 miles or less.
15.8.13	w'w'	The phenomena represented by FU, HZ, DU and SA are reported whenever the visibility is reduced by the reported phenomena to 6 miles or less.
15.8.14	w'w'	BR (mist) is reported when it reduces visibility to between 5/8 mile and 6 miles inclusive.
15.8.19	w'w'	The letter abbreviation SQ is reported at manned stations when the wind speed increases by 15 kt over the two minute average speed that preceded the increase and the duration of the peak speed period is at least two minutes and the wind speed attains a one minute mean of at least 20 kts, during the peak speed period and the wind speed diminishes by at least 5 kts.
15.9.1.1	N _S N _S N _S h _S h _S h _S	The letters CLR may be used when no clouds below 10,000 feet are reported by automatic weather stations.
15.9.1.2	N _S N _S N _S h _S h _S h _S	The summation principle is used in determining cloud amount. Automatic weather stations report cloud directly overhead, layer amounts are determined by persistence of cloud over top of the sensor. Clouds above 10,000 feet cannot be reported by automatic weather stations.
15.9.1.3	N _S N _S N _S h _S h _S h _S	Significant convective cloud (CB and TCU) information is not available from automated weather stations.
15.9.1.4	N _S N _S N _S h _S h _S h _S	All cloud layers observed are reported.
15.10	CAVOK	The abbreviation CAVOK is not used.
15.11	T'T'/T' _d T' _d	This group is not reported in staffed SPECI reports.
15.12	QP _H P _H P _H P _H	This group is not reported in staffed SPECI reports.
15.13.2.1	REw'w'	Automatic weather stations cannot report this group.
15.13.3	WS RWYD _R D _R or WS ALL RWY	Automatic weather stations cannot report this group.
15.13.4	RMK	Supplementary remarks may be included in observations from Canadian stations following the identifier group RMK . Remarks will appear in the following order: (layer type and opacity)(general remarks) and SLP ppp where ppp is the last 3 digits of the sea level pressure. TORNADO, FUNNEL CLOUD or WATERSPOUT shall be spelled out and entered in the general remarks section whenever observed.
15.14		Trend forecasts shall not be used.
